He *did* say, somewhere in there, that he can tell you where to find
one if you want to buy it. The implication is that he doesn't sell
the tool, and isn't interested in selling the one he has and having
to buy more.

If you *do* want to buy one, why not send him email asking who
sells them?

Just a thought, but the supplied antenna on the Icom IC-T81 is about
6 1/4 inches long, and works on 6m too. (and 23cm).

The Yaesu's VX1 antenna is only 4 3/8 inches, and performs well on 2m
and 70cm.

They both have SMA connectors

Well, if you've got demo software that has a time limit, this'll trigger it.
Also, if you're using something like, say, McAfee, with a timed paid-for
update period, this'll mess you up too. I had installed McAfee from Plus
98! when it came out, and somehow my clock got set wrong. When I fixed it,
McAfee told me I'd used up my whole year of free updates.

Ahh...but around here the McAfee software is FREE periodically if you take the time to mail in the 100% rebate. Might it be smarter/cheaper to just go ahead and get another FREE McAfee package when one of the computer stores is running a promotion?

In addition, you can STILL download the virus signature updates from McAfee/Network Associates EVEN IF THE "UPDATES" HAVE EXPIRED. That update is merely the update for the "engine" that runs the software and NOT the virus signatures which is really the critical part of the package.

2380. Icom W2A Do I have a lemon? Repair center problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-01 00:00:00 UTC
From: Michael Orchard <morchar@pacifier.com>
Message-ID: <37a4670f.0@news.pacifier.com>
Source record: 102342

I have two IC-w2a radios which I have had for about four and five years. We use these radios lightly, and pretty much pamper them...ie no physical abuse, etc.

I now need a major repair on one of my radios (the fourth time in five years!) and have about had it with Icom and these radios. For the second time in 13 months this radio had completely fried its main circuit board.

One time it was sitting in the Icom rapid charger, and got quit warm...and was fried. The first time this problem was totally unrelated to being in the charger. It was not on while in the charger.

Opinions please......

1. Is this model a lemon altogether...
2. Is Icom going to care...ie do I have any likelyhood of getting them to fix or replace this radio at a discount.
3.Is there a better place to get this repaired than the icom service center in Washington State? They, to my perscpective, have not been very good to send repairs to....very poor comunications to the customer with anything but estimates.
4. If I give up on this product altogether, can anyone recommend the a very reliable handheld 2m/440 radio brand and model? We do not abuse the radios....but there must be something out there designed to stand up to the occasional dropping, etc that may happen in the future.
5. Should I charge batteries in the rapid charger only with the radio not attached?
6. Could I have a problem with the charger?
7. Could a power surge cause such a problem?
8. If so, would a surge protector actually be of any value?

If possible, please forward any replies to my email, if it is not too much trouble.

Thanks for your thoughts.

Michael Orchard (KB7SUE)

2381. FS NIB Power Transformers

I have 2 new in the box Hammond Power Transformers. Both are vertical mount types. The smaller is a suitable replacement for tube amateur receivers, whereas the second would be a good replacement for small ham transmitters, such as the DX20/35/40 types.

Specs as follows

Part# 271X25 115V Primary 55va Sec. 280-0-280 50ma. Rectifier Fil 5V 2A, Sec 6.3V 2A $12.00 plus postage.

Part# 273Z25 115V Primary 95va Sec 350-0-350 110 ma. 5Volts 2amp, 6.3volts 4amps. $20.00 plus postage.

As last ditch effort, assuming the original spring is "expendable" :

Try heating it red hot with a torch, and then immediately immersing in a oil or salt water bath. That should anneal the steel and restore some of the strength.

Why make it nationalistic Walt? I responded the way I did because of the tone of your post not because of where you live.
If you look at the offer he proposed he clearly isn't going to retire soon on the hand full that may take him up on his offer. It's a very expensive tool if you buy it from Kenwood, and for those not willing or able to modify a set of needle nose pliers it seemed like quite a nice offer. The traditional Ham Spirit is very much alive and well here too.

> But then I guess that's the difference between the Yankee capitalist

> still (fortunately) have here in Europe .....

Heh heh, yea I know that's why there is more Dutch and English investment in the U.S than any other foreign country. I guess you know a good thing when you see it. Your right about being a capatalist country though, it's nice to live in a place where you can be middle class, rasied by a stepmother and go on to be the President of the country. Money isn't King here Walt, we just have so damn much of it, it makes it look that way.

Larry, this may sound silly but have you tried your local hardware store? Not the big chain stores but the smaller ones? There are several in my area that have trays of brass nuts, bolts, springs, etc. and there are several, although not exact replacements, that would fit your application nicely. I refinished an old hand key that was missing the same and used a straight spring with no taper and used epoxy to glue it to the steel base the key was mounted on.

Very good reply. I'm in a small town and both the Tru-Valu and ACE
hardware stores here have a Great Selection of such 'stuff'. Since
they want to cater to the wide spectrum of customers they have --
ranchers, boaters, homeowners, und so weiter, and the occasional weird
ham -- they have a huge set of those carboard-boxes-on-slide-out-shelves
containing selections of misc steel, brass, copper, and stainless steel
hardware. I can spend hours there -- "taking inventory" -- as I 'invent'
some new antenna or gizmo.

Several hundred years ago, before I built my current collection of
peanut butter jars filled with 'stuff', I used to take the springs
out of useless ball-point pens for projects. Tho', such a spring
as that may be too light for a CW handkey.

For Sale: Motorola GP-68 VHF Portable Radio

20 channels
5/1 watt selectable power output
136-174Mhz
DTMF Keypad
Automatic Repeater offset options for easy Ham access
Has alpha display of channel number & frequency
Scanning with user-programmable scan lists
All the standard options, such as busy channel lockout, time-out transmit, etc...
Comes with brand new, "still-in-the-box" drop-in charger and antenna

100% fully user-programmable - no software or computer necessary! Simply type in the frequency in the keypad, and you're instantly on the channel! Then, choose your CTCSS/DCS/DTMF tones/signalling options, and save the channel into memory!

I bought this radio at a Hamfest two weeks ago, but since then have been given a brand new radio by my company, so I don't need this one. This unit is literally 2 weeks old, STILL IN THE BOX! Comes complete with manuals, and programming instructions. The radio and genuine Motorola drop-in rapid charger, are both in original packaging and never been used.

This radio goes for around $800 new... Need to sell fast so open to any offers.... Please email with any questions. Picture available upon request. Thanks for looking!

2392. FS: ### K-55 DASHMOUNT RADAR GUN

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-01 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19990801142422.03957.00001234@ng-fi1.aol.com>
Source record: 102354

For Sale: MPH Industries K-55 Moving Traffic Radar

Dashmount
Comes with antenna with suction mount for dash
Cigarette lighter plug
Remote control operation
Comes with the manual & all tuning forks
Comes delivered in the original case to store unit and antenna

Get complete specs at http://www.mphindustries.com/k55.html

The K-55 still sets the standard for reliable speed enforcement. This time-proven radar continues to be the choice for a large number of law enforcement agencies because it is easy to operate and has a wealth of established case law. In fact, the accuracy of the K-55 has been upheld in traffic court and at the appellate level more often than any other traffic radar. The K-55 is NHTSA/IACP certified and features a two window speed display, simple remote control, and all of the functions necessary to prosecute speeding violations.

Unit in excellent shape and is in 100% working condition... Selling because I don't need it anymore. This unit sells for over $1200 new! Looking to get $250 plus shipping.Please email with any questions. Picture available upon request. Thanks for looking!

2393. Telemetry Equipment Needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-01 00:00:00 UTC
From: Pete Riley <riley@sprintXmail.com>
Message-ID: <37A49BC2.3EB0@sprintXmail.com>
Source record: 102355

I am in the early stages of a system design that will require data telemetry via UHF. The system has about 8 analog (0-5 VDC) signals that I need to transmit. Another approach that I may need to use is converting the signals to an RS-232 signal and broadcasting that.

I need to use 'off the shelf' components if possible. Can anyone recommend a/some good source(s).

Thanks.

Pete Riley-remove the X from my address if you want to reply by e-mail

2394. Xtal Design Needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-01 00:00:00 UTC
From: Pete Riley <riley@sprintXmail.com>
Message-ID: <37A49BF7.4AD1@sprintXmail.com>
Source record: 102356

A while back I started digging for some designs for crystal radio sets for our boy scout troop to build. I came across one that seemed neat in that it used a transformer to drive a small speaker or low impedence ear piece.

I misplaced the design!!!

Has anyone seen a design like this one? If so, please either post or e-mail it to me.

Thanks.

Pete Riley-remove the X from my address if you want to reply by e-mail

2395. Re: FS: ### MOTOROLA GP-68 VHF PORTABLE.. NEW!!

Well, the current MSC sale flyer does have an adjustable
pin spanner for $9.95. It would do this task. These nuts are
commonly used by the optical and electronic industries in
a variety of sizes, so it shouldn't be surprising that there
are ready made tools to fit them available from the larger
tool jobbers. IMHO Kenwood is just gouging at $60.

No, that won't *anneal* the steel, which would make it soft. That will
harden the steel, glass hard in fact. That's the *first* step in restoring
its spring. Hardening is done by bringing the steel's temperature above
the Curie point (a magnet won't stick to it), then quickly quenching it.
A bright cherry red glow is approximately the right temperature, though
the magnet test is more foolproof.

The second step is to draw the temper back so that it isn't so brittle that
it will break when flexed. That's done at a much lower temperature.
You want to heat it until the polished surface turns a light straw or
bronze color, about 400 to 550 degrees depending on the alloy, then
plunge it into cold water to keep it from turning purple (dead soft).
These latter colors are oxide colors on the metal surface. The surface
has to be polished to see them. They run *quick*, so you have to be quick
to plunge the part into cold water at just the right time to get the desired
temper.

If you were to heat the spring until the colors run purple, then let it cool
slowly, you'd anneal it to a dead soft condition. It wouldn't be a spring
then. Of course you can harden it again and try tempering it again. There's
a bit of an art to doing this at home, but blacksmiths did it for centuries
before the advent of carefully controlled alloys and special hardening
and tempering furnaces with electronic profile controllers.

Several of the responses that I have seen, trouble me. If an individual lays down his hard earned cash on an item and it is defective, I believe it is the retailers job to take care of the problem. They should have a responsibility to the customer. This action should not have to fall on the consumer.

If you paid for this item with your credit card, I would contact my credit card company and refuse the charges and let them know why. We have gotten fatter and lazier in our old age. We gotten to the point where we will accept and settle for anything without a fight.

2418. FS or Trade: QRP Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-01 00:00:00 UTC
From: Jeff Johns <jeffj@scott.net>
Message-ID: <348652810204831NEWS2LX@news.idea-works.net>
Source record: 102380
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap

I have the following items that I would like to sell as a package or possibly trade for some type of VHF/UHF equipment (dual band HT, mobile rig, base rig, etc.) or some type of 10 meter equipment:

Small Wonders Labs SW40+ 40 meter QRP CW transceiver. Has optional factory enclosure also has option Freq-Mite frequency counter. Currently set for the Novice section of 40 meters (easily changed to General & up portions of the band). Also includes a ten-turn pot that aids in tuning, but I have never gotten around to installing it as the factory pot has served me well.

NJ-QRP Club Rainbow Tuner with optional beautiful and 'bulletproof' enclosure. This is an awesome QRP tuner which tunes a longwire for 40 meter operation. It is powered by an internal battery and uses four small 'rainbow colored' LEDs to indicate SWR. You can view details of the Rainbow Tuner at http://www.njqrp.org The tuner is also easily converted to operation on other bands through a kit which I believe the NJ QRP Club is still has available. Connection to the SW40+ is made through a short piece of coax with BNC connectors on each end, which would be included. The tuner automatically turns itself on when it sense RF and run hundreds of hours on the included battery.

I also have a Ten-Tec AC5 QRP tuner which I bought that is missing the top half of the enclosure and basically needs to be cleaned and put back into working order. I have never used this tuner, but all it needs is dusting off and one of the connectors on the back repaired.

Depending on what is offered, either financially or in trade, I also have a Vectronics keyer that has been built into a Radio Shack plastic enclosure that conatains an internal speaker for code practice and is adjustable for about 3wpm to about 30wpm. It is powered by a 9 volt battery.

I am 99% sure that I have manuals for all the above listed items and would also provide them with the equipment.

If anyone is interested, please feel free to email me. Thanks and 73!

2419. Re: Yaesu Ft-2600 Comments??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-01 00:00:00 UTC
From: David Kaye <n2sjh@worldnet.att.net>
Message-ID: <7o2v4ghjs1@bgtnsc03.worldnet.att.net>
Source record: 102381

I am having the same exact problem with my recently purchased FT-2600M.
That is why I am driving to HRO in Delaware to RETURN it tomorrow! I cannot
believe they would release a radio full of bugs! I can't wait to get rid of
it and get an ICOM!

It wouldn't be surprising that it cost a lot more than $37.50... I've seen
specialty crimping tools sold on Digikey for $900.

Source record: 102475

I have for sale a Tektronix 465 scope. This is a dual trace 100MHz scope.
It has only one probe, the operators manual, protective front cover, visor
that goes around the CRT and the pouch that holds everything.
This scope looks and operates great. Nice bright CRT with no burns. The
only problem I know of is it may need to be calibrated because when you
read dc voltages it is incorrect. I'd like to keep it but I have too many
hobbies and would like the cash more.
If you think you would like this scope make me a good offer and you never
know..... it could be yours.

If you've got a PC that you use exclusively for home use (games, word
processing, spreadsheets, etc) you probably don't even need to check its Y2K
status. The rollover will either not affect it or not cause any serious
effects.

"Gary" <Hains@smellynet.com> wrote:
> Does anyone know the best price or how to make the cable for the
> computer interface?

The interface is a bidirectional level converter, changing TTL-level to RS232, and vice versa. The supply voltage comes from RTS, CTS and DTR and is stabilized with D2 to 5V. Q1 works as a simple switch, getting the data viz R8 from the PC. In the opposite way Q2 drives the push pull stage Q6 and Q4.

Here's the schematic:

http://www.icongrp.com/~sllewd/pcware.htm

This cable works with the Yaesu FT-50, VX-1R, VX-5R. The cable can also be adapted to work with the FT-10 & FT-40 - which use a 3 conductor programming cable.

> Price??

For $39.95, you can get a cable...along with some solid programming software: ADMS from RT Systems:

http://www.rtsars.com

or from Ham Radio Outlets:

http://www.hamstore.com

Can anyone tell me if there is a pot to adjust the squelch threshold on the FT-5100 and if so, where it is located? Signals too weak to register on the S meter break the squelch even if it is turned up fully. A real annoyance when scanning! Thanks.

As new Icom IC-Z1A dual band ht (2m/440Mhz) with sveral included options. This ht is in perfect condition and is a 10 out of a 10 functionally and cosmetically. The ht has a detachable front panel which is actually the display and is intended to be used as a full digital display speaker microphone if you so desire. The Z1A has an alphanumeric display, alphanumeric messaging and paging, backlit keypad, independent tuning knobs plus many other features. the ht has an extended receive from the factory and there are many modifications that can be done to enhance the radios capabilities. I am selling this ht with 2 Icom bp-180 Ni-Cad battery packs which are in excellent condition, two new Maha MH-BP-180 Ni-MH battery packs which were bought at Dayton, BP-170 AA battery pack, BC-79 rapid charger, CP-12 cigarette lighter cable with noise filter, HM-46 speaker microphone, Radio Shack vox headset with boom microphone which was bought at Dayton, soft case for the ht, and a Comet tri-band high performance rubber duck. I am the original owner and have the boxes, owners manual, sales brochure and all of the standard accessories that came with the unit.
Asking $300.00

No problem Tom.

It maybe a typo, but what do you mean by "...how do they then function as a transverter?"? Are you inquiring as to how well does it operate *WITH* a transverter?

The radio is a ICOM IC706MKII. I can now use a 440 transverter to cover the whole range. This is NOW not an issue since it costs less to purchase a IC706MKIIG to perform the same function, a mobile satillite packet station. BUT indeed the upper amateur frequency allocations are expansive, measured in 10's of megaherz, not kilocycles. Having a wide band transceiver to put behind transverters is a definate plus.

Being from So IL, I miss the Cards on KMOX. You should be able to receive them in the evening with a good AM antenna. I rigged just a long wire to my stereo and it worked fairly well. However, it will depend on the antenna orientation of KMOX. I know some stations orient E/W or N/S. I used to wait until after nine at night in the summers to listen to WLS 890 on your dial. I can still hear it from time to time here in the Washington D.C. area, but I am pretty sure it is off the sides.

Good luck with it.

2443. FS or Trade: QRP Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-02 00:00:00 UTC
From: Jeff Johns <jeffj@scott.net>
Message-ID: <4294947510281019654 5NEWS2LX@news.idea-works.net>
Source record: 102236
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.amateur.homebrew

I have the following items that I would like to sell as a package or possibly trade for some type of VHF/UHF equipment (dual band HT, mobile rig, base rig, etc.) or some type of 10 meter equipment or maybe even an older laptop:

Small Wonders Labs SW40+ 40 meter QRP CW transceiver. Has optional factory enclosure also has option Freq-Mite frequency counter. Currently set for the Novice section of 40 meters (easily changed to General & up portions of the band). Also includes a ten-turn pot that aids in tuning, but I have never gotten around to installing it as the factory pot has served me well.

NJ-QRP Club Rainbow Tuner with optional beautiful and 'bulletproof' enclosure. This is an awesome QRP tuner which tunes a longwire for 40 meter operation. It is powered by an internal battery and uses four small 'rainbow colored' LEDs to indicate SWR. You can view details of the Rainbow Tuner at http://www.njqrp.org The tuner is also easily converted to operation on other bands through a kit which I believe the NJ QRP Club is still has available. Connection to the SW40+ is made through a short piece of coax with BNC connectors on each end, which would be included. The tuner automatically turns itself on when it sense RF and run hundreds of hours on the included battery.

Depending on what is offered, either financially or in trade, I also have a Vectronics keyer that has been built into a Radio Shack plastic enclosure that conatains an internal speaker for code practice and is adjustable for about 3wpm to about 30wpm. It is powered by a 9 volt battery.

I am 99% sure that I have manuals for all the above listed items and would also provide them with the equipment.

If anyone is interested, please feel free to email me. Thanks and 73!

Jeff

One thing you could try is an AM radio made by GE called a SuperRadio.
Also, I highly recommend an external antenna called a Select-A-Tenna.
This is a very simple AM broadcast antenna. It requires no batteries
and no direct hook-up to the radio. You simply set it next to an AM
radio, tune in the frequency you want to listen to on the Select-A-Tenna
and it will pull in stations loud and clear you could not even hear
without it.

I have one and am very impressed with the performance. Of course there
is no guarantee it will do what you want it to, but its worth a try.

I have seen the Select-A-Tenna devices sold used on the rec.radio.swap
occasionally.

13.8V, 8A continuous, 12A peak Nucleonic power supply. Has current meter, overvoltage protection, and foldback current limiting beyond 12A. Output voltage regulated to +- 200 mA for all design loads. Excellent condition cosmetically (It has an attractive brushed copper front panel) and operationally. I'm selling it because these days I spend more time on computers than hamming.

Price: $50 plus shipping (which will not be negligible, since it's well-made, that is to say, heavy. I have no means of measuring its weight accuratedly. I Will ship it parcel post if that's OK with you. If not pick method.

Includes brief manual.

Good Ole 1120 AM. 50,000 watts. Shouldn't have too much problem, however I would like to suggest what someone else already did and thats the GE Super Radio and an external chunck of wire. If you can't find one Radio Shack has their version of the Super Radio on sale this week for 39.95. These radio's simply have a tuned front end and give much better selectivity to pull in the weaker stations... I bought one of the Radio Shack models to use in my office thats in a metal building in an industrial park and it works great. Even tunes out my computer noise. Good luck

rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

: how do i do it?
: ilost my owner book so.......

: the radio is in good shape and never been abuse!!!!!!!!!

: ve2ckn@rac.ca
: gervais
: email me for the response!with details please

You CAN'T!

The 50 is NOT a true dual-bander.
Only one frequency at a time.....which is why you can't hear 2 signals at
the same time.
If you need cross-band get a true dual band unit, like the ft-51.
I have a '50 and like it, but if I needed to do cross-band, I'd dig out my
old Icom W2A-it, being a true dual band radio, WILL cross-band.

: I'll be very thankful.

: Thanks!
: Nova

Does that IC have a RSSI or a S-meter pin?

If so, see if you can connect a AM detector there...at least with some
other FM chips, the RSSI pin works!

You haven't provided enough data (like sample rate or resolution) for a
more
detailed solution, but this might get you started in the right direction.
You can get a serial output monolithc ADC with an eight channel input.
Assuming the sample rate isn't too high you can purchase a < $20 xmtr
from Linx(or others) on 433 MHz with a serial data port. They also sell
a recvr. These output about 3 mw (you didn't spec range) you may need to
get an amplifier. They also offer 900 Mhz links. BOBBY

Source record: 102306

if you read other posts on the "ONE LIST" it appears Yeasu shipped the FT-100 in a rush to compete with the IC-706 MK II G
Thea Radio is full of bugs and they knew it. They said "SHIP IT". we will deal with the problem later.
Read on the Newsgroup today and you will see another guy with a FT-2600 2 MTR FM radio just out from Yeasu. You guessed it.
He and many others have a major problem with the radio. I can see the problem with the FT - 100 but how can they screw up a
FT-2600 simple 2 mtr fm radio ???
It appears Yaesu's philosphy is to make poorly designed products and to TEST the products on the Ham community like we
are ALPHA or BETA testers. Problem is we PAID top $$ for these radios. I suggest
that if you are looking for a 2 mtr fm mobile
please look at Icom

2480. Re: Bad FT-100 Yaesu

Source record: 102307

Forgot. If you must buy the FT 100 I suggest waiting a year til the bugs are out and the bugs are big ones like the radio dying on you totally. Do yourself a favor and buy the IC-1706 mk ii G.
Also, don't buy from Texas Towers since they won't back up thir product. Texas Towers is just a middleman who marks up the price and gives you no service at all.
Why can't we buy direct like from Ten TEC and get rid of these middle men who simply raise the price but offer no extra
value.

2490. ***FS: VX-5R TRI-BAND HT PACKAGE DEAL***

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-02 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19990802125634.17074.00005167@ng-fs1.aol.com>
Source record: 102317

Hey, since I really need money right now I am selling the following radio and accessories as a package:

Yaesu VX-5R Tri-Band HT with VERY wide receive:

TX: 50-54 MHz, 144-148 MHz, 430-450 MHz (can be extended WAY beyond that)
RX: 0.5-15.995 MHz, 48-728.990 MHz , 800-998.990 MHz (Cellular Blocked)
AM/NFM/WFM modes selectable in ANY band
5 W Power Output (430MHz: 4.5 W)
220 Memory Channels plus Home Channels
Ten Auto-Scan Weather Channels
MIL-STD 810 Rating
Aluminum Diecast Case
AM Aircraft Receive
AM Broadcast
FM Broadcast
Shortwave Broadcast
CTCSS Encode/Decode, Digital Coded Squelch (DCS)
Backlit Keypad
Auto Range Transponder System (ARTS)
8 Character Alpha Numeric Display
Time Out Timer (TOT)
Dual Watch (two freqs displayed at one time)
Dot Matrix LCD
Smart Search
Spectrum Analyzer
Temperature Display Read-Out
Barometric Pressure Sensor
Automatic Power-Off (APO)
ADMS-1E Windows PC Programmable (Optional)
High-Capacity Lithium-Ion Battery 7.2V @ 1100mAh (Supplied)
Super Thin Profile/Lightweight Design
16-Digit 9-Memory DTMF Autodialer
Busy Channel Lock Out (BCLO)
Innovative Multi-Section Antenna
The radio also comes with the full schematics
Warranty Card UNFILLED OUT so you can send it in and get the FULL warranty

Here's what else you get with the radio:

1. The optional SU-1 Unit which is already installed. This chip tells you your elevation and the barometer (the radio also has a tempature display.)

2. Brand new JDI Speaker/Mic (JD-3604) in the box. This is the appropriate speaker/mic for the VX-5R. It also has an extra output for an earphone.

3. Larsen Mag Mount antenna for 2m/440 (also does very well for RX out of band). I am not sure which wave lengh it is (1/4 wave, maybe?) It's about 17 inches tall and has a coil in the middle. I lost the manual so I can't tell you how many DB gain it has, but needless to say I can hit repeaters 50 miles away with it using the VX-5R @ 5 watts. This antenna has been used TWICE mobile and is in PERFECT condition. Comes with the mag mount and the coax with PL-259 on the end.

4. MFJ Telescopic 2m/440 whip. 19 inches tall when fully extended. PL-259 connection plug. Very handy when reaching those repeaters that seem to be just a bit out of range of the rubber duck.

5. SMA to BNC converter. This means you can use the VX-5R with both the telescopic antenna and the mobile antenna. Also I'll throw in a PL-259 to BNC converter.

6. SAM Amateur Radio Callsign Database CD

The radio is in LIKE NEW condition. Very rarely have I used the radio outside or in the car, so there are no scratches or marks on it AT ALL! I have the box and the receipt for it, the NC-72B charger and two manuals (the first manual had an error in it so I was sent a new copy). This is the version of the VX-5R which has the PL tone problem FIXED (right from the factory, I didn't have to send it in). This is also the one which you can mod for out of band using the software OR the hardware mod (check out <http://www.icongrp.com/~sllewd/vx5rmain.html>)

So anyway, I am looking for BEST OFFER for this entire package (US hams only, please). If interested please email me. Thanks for your time.

read the small print that most Ham dealers
have on their magazines/Websites.
They basically want to just mark up the radio and not support the customer in any way. Basically, "you bought it now you are stuck with it". I buy my stuff at the Ham store directly since the store 8 day refund policy is OverTaken by the State Law
14 or 30 day refund policy. I know a few guys who took one place to court and one.
If there is a local store near you check out the state law and you will see it pays to buy in person. I still feel we should all be able to buy direct and elimiate the Dealers altogether since they give little support and simply add aditional $$ to the radio due to them being a middleman. I think Ten Tec was right to go direct.

>old Icom W2A-it, being a true dual band radio, WILL cross-band.

That's all true, but I must ask: just how useful is a 5W crossband repeater? If you already have a 5W handheld like the FT-50, a 5W crossband repeater (using another handheld like the FT-51 or W2A) doesn't get you any more power. It might get you some more range if the crossband unit is using a better antenna, or is in a better location. But usually, you also want more power, so it makes more sense to do crossband repeating with a mobile rig, not a handheld.

Mobiles also have more intermod resistance, so you can usefully use a better antenna with them. And they usually have fans, or large heat sinks, so they can operate at 50W output for long periods, and 5W or 10W forever. Handhelds will not operate at 5W output for very long without overheating.

2494. FT847/Collins Filters

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-02 00:00:00 UTC
From: John Cramond <john@gm4nhi.demon.co.uk>
Message-ID: <cp$c6BAt2dp3Ew8D@gm4nhi.demon.co.uk>
Source record: 102321

Hi all,

A friend has just bought an FT847 with the optional filters. He has fitted the filters but finds no difference on receive. He has asked me to have a look at it for him (he is in his nineties). Is there anything to watch out for when fitting the filters, or for that matter, anything specific to do after the filters are fitted?

Any advice appreciated...John

As a displaced St. Louis fan, now in the city of Chicago, I find myself missing KMOX radio.

Does anyone out there have recommendations for an antenna I could use, at home, to pick up KMOX on my home stereo system?

I tried talking with the guy at Best Buy, and he really was of little help.

For those not aware, Chicago and St Louis are approx. 300 miles apart. KMOX sends out an extremely poweerful transmission, and I know people who can get it as far away as Orlando, and throughout Texas and Arkansas.

Any advice whatsoever would be appreciated. Thank you.

Joshua

From: John Warren <warren@colorado.edu>
Message-ID: <7o56rk$54@peabody.colorado.edu>
Source record: 102329

I use a SB-1000 Heathkit Amp. with a single 3-500z tube. The tube glows red
at power on in the standby position with nothing attached at any connector.
I am not to opptimistic about the answer...but can anyone tell me what might
have happened?
I used the amp. (as I usually do I think) for a SSB qso. Then switched it
to stdby and left the room. I am pretty sure I heard a snap from it while
out of the room. I shut down
the station afterwards. The next day I tried the amp. and found the tube
glowing
with no inputs, key up. It was on 5 minutes and very hot. The tube is
surely gone now.
Before I noticed the heat I found the grid current meter deflecting offscale
to the left at key down.
I will crack the cover and ohm out the tube for shorts tonight. I havn't
had much experience with amplifier failures and would welcome comment from
those who have.

Thanks in advance
John Warren

You seem to have lost cutoff bias to the tubes, permitting the static plate current to flow - perhaps excessively for the tubes to survive. Could be the diodes or filter capicitors in the bias supply, or the contacts in the internal relay that switches the bias from idle to operating.

Very few retailers have more than a 30 day return policy.
Most refer you to the manufacture. In these days of mass
marketing, price is more important than service. WSJ and
other business news have commented on it. Most customers
are interested in price more than even quality. It is the
"Wal-Mart" mindset. (It is even a bigger problem in the
gun community.)

The only feature that the FT-100 has is 300 memory channels.
Icom has been stingy with memory channels on all its radios.
Look at the VX-5R. Far more channels than any ICOM HT. It
is one important feature for me due to the amount of travel
I do.

Even in my local area, there are a huge number of
frequencies that I listen to. I use my radios for
more than just amateur radio. I have MARS, Emergency
Management and military uses as well.

That may be the direction of the future. Manufacturer direct. Local
dealers
are just about gone. The same could happen in guns if it were not for
federal
laws. Think what would happen if the feds required radios to be sold
only thru
locally licensed dealers. It would be a boom to small businesses.
Except now
the feds don't like all the little guys that are in the gun business.

I bought one a couple of weeks ago and sent it back 2 days later.
They advertise RX coverage from 76-999, but that is not true. It is
stone deaf in the 225-350 mhz range. The VCO wont even lock around 290-
300. I bought it to use as a scanner, with the HT part being secondary.

As an HT it is probably OK, but I wanted it to listen to military air
traffic, and it is not capable.

Good luck,
Ed

Source record: 102137

Okay, here is my deal.... I have a '96 yukon, and I need to mount a Comet B-series NMO Ant on it. I cannot put it on the roof of the vehicle because of the height req. of the garage. So, I thought I would put it on the front left fender. But I would rather not use the standard L bracket that sticks out and looks obtrusive. Here is what I am looking for: I would prefer to use a conicular shape mount, that would be pre-molded to the fender. Look on any vehicle that comes stock with a factory FM radio ant mount. See how it is "molded" to the fender? The connector is actually elevated and parallel with the ground. Has anyone ever seen one, or know where I can get one for an NMO ant? Any information would be greatly appreciated... Thanks..

Source record: 102138

Hi,

I have a Bird Model 4041 Field Strength Meter up for sale. Covers 1 to 1000 MHz., has a dynamic range of 30dB minimum, a high pass filter network, and a variable gain RF amplifier/detector. The gain control adjusts sensitivity of the device to various field intensities. Typical Sensitivity is: full scale deflection at 8ft, (2.5 m), from a 1 watt source, broadcasting at 150MHz through a quarter wave antenna. Runs on a 9 volt battery, with a life of 200 hours minimum. $115.00 I pay shipping.

Unit can be viewed at:

http://www.ruralaccess.net/mpe/fred/bird.jpg

Thanks,

Fred

Yep...

And the problem w/many ham radio dealers (as well as the firearm dealers mentioned by Greg) is that even *IF* the seller wanted to be helpful, it's difficult to fix rigs w/surface-mounted custom or semicustom ICs, etc. And we then run into the situation where the store is hiring a guy to fix the mfgr's problems! That ain't right either. Stores *could* be a focal point to force good service policies out of mfgrs, but with thin margins, about all they can do is move boxes. Selling ham radios isn't much different than selling TV sets these days - most consumer products are regarded as disposable-when-broken; it's just that little ham radio dealers don't have the same clout with their respective mfgrs that Circus City or Good Guys have w/Sony, RCA/GE, etc. - they can make the mfgr "eat" bad product w/o much grief. If your new TV/stereo/etc. goes kaboom within the 1st few months they'll often swap for a new equivalent set if you yell a bit - doesn't cost 'em.

Many gun stores don't like to tweak w/new weapons due to liability, insurance issues, etc. And finding good local non-specialist general-practitioner smiths is getting harder & harder. It's one thing to reblue a gun or stone a sear for a smoother trigger but retiming a Colt Python, doing a good .45 trigger job, etc. is a bit more work. That's why I build my own AR15-style rifles now :-) Might as well learn how to do it right yourself.

The car biz in some ways isn't much different either. Here the factory warranty work is done at the local dealership. Parts costs aren't really an issue here, but the car co. takes an ultraconservative rock-bottom estimate of hours required for the repair, and at discounted rates - not necessarily reflective of reality. The extra time required is often not reimbursed by the mfgr to the dealer, and the dealer loses money both in terms of lost, unpaid time and the opportunity cost of not doing non-warranty work. Larger mega dealers have more clout w/GM/Ford/Toyota etc. and can thus negotiate warranty-work compensation better...

Regards,
Bill N6AOT

It can be forbidden, but at least you can buy an unlocked frequency
scanner. Then it's up to you.
I can pick up cell phones (ETACS and Cordless) comms. On top of that many
cell phones now in Europe are GSM and in a very very short time it will be
"impossible" to pick 'em up. But, where's the fun ?

Date: 1999-08-03 00:00:00 UTC
From: John Warren <warren@colorado.edu>
Message-ID: <7o7u5o$n4v@peabody.colorado.edu>
Source record: 102154

Wow an easy fix... Thanks to all who replied... Here is the Solution:

This amplifier is a Heathkit SB-1000... Had the plates red hot on Standby.
There is a tiny piece of coax that brings the input signal from pin 8 of the
band switch to a small 3 lug terminal strip at the filament RF choke near
the 3-500. The shield of this cable was laying against one lead of the
choke!
This cable wasn't tied or soldered in such a fashion as to prevent movement!
Well it is now...Hi Hi
Went you key the relay on the SB-1000 it brings the center of the filament
winding to ground to remove the cut-off bias and turn on the tube. This
cable
short was removing the cut off bias pretty well too.

Thanks again to all

John Warren KD0OM

Needless to say I am very happy and maybe a touch Lucky!

My suggestion is that you need a specialty antenna from STICO, they are in Buffalo, NY. I don't know of a url for them but I bet the 800 information operator will give you a good number for them.

They make disguised am/fm vhf/uhf antenna's that replace your oem antenna. They'll need to know your vehicle information and the freq's (center) you want to operate in.

BTW, they're pricy, but when nothing else will do, they fit like they belong there.

Hope it helps.

javnaim@aol.com says...

I AM POSTING THIS MESSAGE TO THIS NEWSGROUP AS I SEE ROLAND GETER CONDUCTING BUSINESS ON THIS NEWSGROUP. IT IS MEANT AS A WARNING TO THOSE CONSIDERING DOING BUSINESS WITH ROLAND GETER, I AM NOT LOOKING FOR FLAMES, REPLIES, ADVICE, ETC...THANKS

Hello Everyone,

On August 26, 1998, I posted a warning message about doing business with Roland S. Geter, Sr., WB6LNA. Mr. Geter posted a "wanted" message on the newsgroups in late June, 1998 for laptop computers for a "law enforcement" project. I e-mailed him about a Toshiba Pentium notebook I had for sale that was not working and needed minor repair. I specifically explained to him what was wrong with the notebook, we agreed on a price and Roland Geter agreed to pay shipping. He requested Fed Ex C.O.D. shipping, since he "did a lot of business with the shipping depot in Phoenix Arizona" and things would go a lot easier. It cost me $132.58 in shipping and C.O.D. charges to ship the package.
I shipped the package as per his specifications and request and advised him of such. When the package arrived in Arizona, Roland Geter failed to pick up the package as requested by Federal Express several times. After several days the package was returned to me less my shipping charges I had already paid.
After that, I contacted Roland Geter several times by e-mail and phone to no avail. He always told me he was sending payment but never did. I finally took further action in late August, 1998. I posted the original warning message, contacted the proper authorities and filed a formal complaint with the Maricopa County Sheriffs' Office in Arizona. Roland Geter had stated to me he was a deputy with that sheriffs' office, (which later proved to be false).
After a lot of pressure from many on the newsgroups and the sheriffs' office, Roland Geter contacted me in late September, 1998, to call a "truce" and settle our dispute. I had received several e-mails from others who had been ripped off by Roland Geter so he agreed to pay me and then "square up" with the others. At that time I also agreed to stop the pressure from the newsgroups and the sheriffs' office.
To make a long story short, to this day I still have not received my money. I have tried to contact him several times a week to no avail. The others involved also have not received payment. I made the mistake of not doing a search on Deja News about Roland Geter, if I had, I would have found many others who ended up with the same fate as I did with my business dealings with Roland Geter.
I am posting this message to warn others of Roland Geter's bad dealings, i.e. bad checks, failed payments, bad trades, etc., that he

has done to many, many others and myself. Do yourself a big favor, do not deal in any way with Roland S. Geter, Sr.

Piero

You can only use VFO 'A' to program memories in this unit, but here goes.

(1) set your desired freq.
(2) push and lock the VFO/MEMORY switch
(3) Select the desired memory channel
(4) Press MEMORY/VFO WRITE button

As to the manual, If you'll send me an address, I'll make a copy of mine. Also,
if you're interested, I'm selling my 290 for $175.

George Andrews <mauser2@erols.com> wrote in message

Excellent job Lou !
I know two other guys who had battery pack problems with the same radio so I now know it is a design defect. I hope they fixed the problem on the T8s ?the one that has 1.2 ghz included.
It is a shame you had to go to legal means to rectify the problem. you should have had your money cheerfully refunded. I had a similar problem with Alinco and went to the Alinco Japan Website. I Emailed the president and Yes It was a success. It appears that the Japanese Guys are higher up than the USA Alinco.

> As a displaced St. Louis fan, now in the city of Chicago, I find myself
> missing KMOX radio.

What time of day? KMOX should bomb in to Chicago at night without any special equipment. Do try orienting the "loop" antenna that (I presume) came with your stereo for the best signal & least noise. Some digital equipment (such as your computer... and modem, if it's external) can generate severe interference to AM broadcasts and may need to be turned off.

Grove Enterprises (www.grove-ent.com), among numerous other people, sell something called a "Select-A-Tenna". This is a combination AM antenna and preselector that does not require direct attachment to your stereo. (though a model is available that allows direct attachment to the AM antenna terminals, and if that's possible with your set it works better.) This will help reduce interference and improve the signal strength. Though if you have a lot of noise from several different directions it may not be enough.

During the day, it's going to be very tough. I live about 240 miles from St. Louis and can get a listenable signal from KMOX 24 hours a day -- but during the day, I need a 400-foot antenna to do it!

From what I heard he _did_ offer it on load free of charge. There was a returnable deposit, which I believe is fair when lending over a medium as diverse as the Internet, and the non returnable part could be interpreted as paying for the weardown of the tool.

2560. Problems after programming with ADMS?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-03 00:00:00 UTC
From: lfc@flash.net
Message-ID: <37a6c329.24768957@news.flash.net>
Source record: 102271
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Has anybody had problem with the radio after
using ADMS 1E? I have a problem: I have a FT-51R
and a VX-5R. There are 2 particular repeaters
I can hit with the 51R but not the 5R. Both
memories have the same exact setting but the 51R
hits the repeater everytime and the 5R 1/3 of the
time. And I've swapped antennas and that's not
the problem. Both repeaters are on UHF if that
helps. Is there something inherently wrong with
this radio? I hear someone mention something about
the oscillator going bad after using ADMS. I also
heard something about one person's radio not
locking on to UHF freqs. Can anyone help?

Also I heard some hams saying that the ADMS software
messes up the VX-5R. Is this true? I heard that
it wacks the microprocessor up among other things.
Anyone heard of this?

Mark

Dave Martindale (davem@groucho.cs.ubc.ca) wrote:
: marc_k@walrus.com (marc_k) writes:

: >If you need cross-band get a true dual band unit, like the ft-51.
: >I have a '50 and like it, but if I needed to do cross-band, I'd dig out my
: >old Icom W2A-it, being a true dual band radio, WILL cross-band.

: That's all true, but I must ask: just how useful is a 5W crossband
: repeater? If you already have a 5W handheld like the FT-50, a 5W
: crossband repeater (using another handheld like the FT-51 or W2A)
: doesn't get you any more power. It might get you some more range
: if the crossband unit is using a better antenna, or is in a better
: location. But usually, you also want more power, so it makes more
: sense to do crossband repeating with a mobile rig, not a handheld.

: Mobiles also have more intermod resistance, so you can usefully use
: a better antenna with them. And they usually have fans, or large heat
: sinks, so they can operate at 50W output for long periods, and 5W or 10W
: forever. Handhelds will not operate at 5W output for very long without
: overheating.

: Dave
One reason I did not think twice about buying the FT-50, was that I used
the cross-band repeat function on the W2A exactly ONCE(except to test it).
There ARE situations where it can be useful, but I've not encountered
those situations on any regular basis.

> a single wire antenna. I want a better antenna. What is the best way to go??
> Remember this must be small and lightweight.

A copper tape dipole could work well, but of course it's somewhat directional. If your tail is high enough, you could do a vertical dipole, which will work well unless it's right above you.

One thing to try might be a pair of dipoles, one vert, and the other horizontal, fed with half the power each. I fly rockets, so I don't get that much of a choice. :)

2572. OUTSTANDING BC-610 AVAILABLE- Houston

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-03 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <37A7089F.DAF5E217@ix.netcom.com>
Source record: 102283
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

The best looking BC-610 transmitter I've ever seen
is currently available near Houston, Texas.

This transmitter looks almost new- like it just came off the line.
It's a really cherry restoration. A lot of care and work
went into it. I think there were some other goodies with it, too.

The asking price is $400, which is very reasonable considering
that an unrestored unit goes for about $300 and you won't
have to find all those parts and do all that work.

Phil Mills < plmills@ibm.net >, as fine a gentleman as I've known,
has the unit and will help with delivery within a reasonable
distance from Houston. Please email him directly if interested.

I have no monetary interest in this- just helping Phil
get this fine transmitter to a new home.

>specific to do after the filters are fitted?

Well, I don't know what he expected, but the Collins SSB receive
filter has steeper skirts and a deeper stopband, so it really does
make a big improvement in the radio on a crowded band. On an
uncrowded band, you won't notice much difference. Installation
is straight forward. Just unplug the old filter and plug in the new
one.

The narrow CW filter should make a huge difference.
Installation requires plugging it into the empty slot and
turning on menu item 33 so the radio will know to use it
when you push the front panel NAR button. Maybe he
hasn't done that.

The Collins transmit filter doesn't make much practical
difference, so installing it is probably a waste of money.

Hi. I'm looking for OLD electronic musical equipment from 1950-1990,
ANY CONDITION, broken or parts units ok:

SYNTHESIZERS
KEYBOARDS
DRUM MACHINES
SEQUENCERS
VOCODERS
EFFECTS PROCESSORS
MIDI EQUIPMENT

Knobs and dials preferred but not necessary. The older and more unusual, the
better.

MOOG, ARP, Roland, Korg, Sequential Circuits, Oberheim, Yamaha, EML
Electrocomp, EMS, Steiner-Parker, Ionic, PPG, Synton, Maplin, Univox,
Bode, Aries, Paia or anything similar.

Roland TR-909 Rhythm Composer
Roland TR-808 Rhythm Composer
Roland TB-303 Computer-Controlled Bassline
Roland MC-202 Microcomposer
Voyetra Eight polyphonic synthesizer module
Oscar with or without MIDI
PPG Wave 2.3

For a better idea of what I'm looking for, please see:
http://members.aol.com/rolandman1/index2.html

Please email me at rolandman1@aol.com if youve got anything youd
consider parting with or know someone who might. Please be sure to
include price and condition. Thanks in advance and sorry if this
message annoys anyone.

In full size aircraft, we use a shallow horizontal vee dipole... It helps to fill in the dead zone off the end of a straight dipole...

Clint,

Are you doing tech support in addition to your "Public
Relations" duties? I'm so impressed.

Mark don't pay a lot of attention to Clint he doesn't
really know anything but he does make a lot of noise.
Several posters have noted problems with Version E
check a Deja.com doing a search on ADMS.

For starters use the software to program a UHF simplex
frequency then try that frequency with the VX-5 and
listening on the FT-51. If you are not locking up you
will soon know.

There is an alternative programming software on the
"Unofficial VX-1r" page. It is called EVE and I have
heard some complimentarty things about it. I have it
loaded for my VX-1 but I do not have a VX-5 so can't
tell you anything specific about that box.

Hey, Gerry, baby - where ya been?

I was waiting for your reply to the public lies you invented a little
while back here:

Let's quote you directly on those six "points" you alleged in one thread
alone:

1. "A public statement by RT that Bradford etal do not
represent their firm would go a long way toward repairing
the public relations damage he has done."

CITE your source at RT Systems who believes I have caused P.R. damage.

2. "Your bullshit leaves such a bad impression that it
is actually hurting RT Systems."

CITE your course at RT Systems who believes this.

3. "I had a nice chat with RT Systems apparently you are
a bit of an embarassments to them but there is little
they can do about you."

CITE your source.

4. "The other things I learned gave me a lot more insight
into your real motives. It is certainly strange that
someone so supportive of RT Systems and the ADMS software
would want the command codes for the Yaesu radios. That
looks more like someone who intends to produce a knockoff
rather than someone who supports RT Systems and the ADMS
software."

CITATIONS???

5. "It is apparent that what you really want to do is to
produce your own product it was all quite interesting.
You sir are a liar and a fraud and are simply trying to
divert attention from this."

CITE the alleged "project" you refer to.

6. "...that it was obvious you wanted to develop a
competitor to ADMS. Or perhaps you just want the Yaesu
command codes to be a big shot. Why don't you just
figure them out like Goran did. Perhaps you're just
too lazy and unmotivated as we have previously
discussed."

CITE any evidence you have that I wanted to product any product on this subject.

You cannot use Karen nor Rod at RT as your "source" for your accusations. As a matter of fact, you cannot provide the name of ANY principal at RT Systems who will back you up on any of the above.

If you could - you would have by now...

You cannot provide legitimate copies of anything I have stated or written asking for "codes" for anything. Nor can you demonstrate any interest of mine to get involved in any such project in ANY forum/medium.

If you could, you would have by now...

I do not know why you invent such silliness, Gerry. But it's quite boring, actually.

And now you're back, telling all that I might mislead them.

C'mon, Gerry. There's room enough on the Internet for the both of us. I'll drop my insistence that you apologize for your lies of the past, if you simply start addressing ISSUES as they come up, and stop your psychotic "anti-Clint" behavior.

OK?

2602. FT-50 weird repeater offsets after mod

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-04 00:00:00 UTC
From: h_fiste@my-deja.com
Message-ID: <7oaa6d$16b$1@nnrp1.deja.com>
Source record: 102113

I recently purchased a Yaesu FT-50 with serial number sequence 9C38xxxx. Of course, being the ham that I am (**grin** apologies to Dr. Seuss) I attempted the MARS/CAP mod and the freeband mod. I probably did it wrong as I had no success. I replaced the solder blob and replaced the surface mount resistor. After resetting the micro, everything works fine EXCEPT that on menu 7 (repeater shift) I get some really weird splits. i.e. 0.59, 0.64, etc. I can't get it to do an even 0.60. Any ideas? ADMS perhaps?

Repeater is in good shape and works well,It consists of the following.
2 ea Yaesu FT912R transceivers
1 ea Sinclair 4 cavity pass/reject duplexer.
1 ea 1 watt in for 20 watt out power amp.
1 ea ACC 850 controller (ver 3.6 with front panel
display,autopatch,computer interface and etc.)
All cables to interface controller with radios.
All you have to do is apply 12 vdc,add coax and antenna and you are on
the air.
$1700
Al

2605. 2M hand-held radios....

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-04 00:00:00 UTC
From: BackDraft <bdraft@my-deja.com>
Message-ID: <7oab6l$1pv$1@nnrp1.deja.com>
Source record: 102116

I have been thinking of getting a ham radio (I already have my ticket).

I was thinking of geting a 2M hand-held model so as to be portable. I would like one that susports an external speaker/mic and also has VOX capablity. If it done'st have VOX, then that isn't much of a problem since there is a headphone set that has a little VOX keyer inside of something on the cord.

Does anybody have any recomendations?? Let me know....

thank you for your time....

Hello,

Have found references to old posts on ham-radio.homebrew dealing with modifying amps using 6LQ6 tubes to run cheaper tubes. I've got one and it needs those expensive tubes... Does anybody have a copy of the article they can email me? If you have it only on printout I'll pay costs if you'll snail-mail it.

As I said Mark, ignore Clint, but that should be obvious from
the tirade below.

I caught him in a couple of fibs some time back and he has
gotten a bit carried away with personal attacks on me.
These attacks are not relevant to your problem and so will
not be addressed.

As I said program the VX-5 with the ADMS software and try it
against the FT-51 if you have additional problems there are
several experienced users who post to the rec.radio.amateur.
equipment newsgroup.

There have been several posts and other information sources
I have seen recently that indicate there are some problems
with the new version of the ADMS software. There is a very
good web page dedicated to the VX-1 VX-5 family of radios
called the "Unofficial VX-1 Page" or something like that.
If you do a web search on VX-1 you should find it. There is
a lot more information and a lot less causticness there.
The fellow who authors the page is quite nice and helpful.

Let me know if I can help you further.

I somehow figured as much. For anyone to expect a retailer to exchange a defective unit after *six* months of use is absurd! I do however, expect my dealer to exchange anything I purchase that fails within two, or even four weeks. My dealer does take care of new defective units for me. (Had two new Icoms fail within a week). Sunnyvale HRO stepped up to the plate. I am sure Texas Towers would also provide exchange within a 'reasonable' amount of time. The only reason dealers exist is because of service, and I for one appreciate the service rendered by the dealers I frequent. It will indeed be a sad day when we consumers deal only with the factories when we make our purchases, as most manufacturers are unable to give the localized personal service we look for in deciding on a purchase.

Bill...your comments about auto dealers is a bit off base. Car dealers are in fact reimbursed fair market value for their warranty work. While some dealers may complain that the allotted flat-rate time for various jobs is a bit slim, for the most part, warranty work is a major contributor to a dealers bottom line. Factories pay dealers for experienced technicians to perform repairs on their vehicles. They will not pay for the time it may take an inexperienced tech to learn how to repair a problem.

I just bought a new ht after my old one finally bit the dust. I got
an Alinco dj191h. Only had it a few days but really like it so far.
Have had other Alincos in the past and always performed well. This
one seems up to snuff. AES had them for $149 but not sure if that
price still applies. Check Alincos site, www.alinco.com, for more
info on their radios. Check AES, www.aesham.com, for pricing. Icom
has one, don't remember the model, that looks pretty nice in the same
price range. I also have other Icoms and like those as well but this
particular model would not take 13.8 volts direct. That's the only
thing that made up my mind between the two.

Good luck.

2614. Need Dual Band Mobile Comments

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-04 00:00:00 UTC
From: Jim W6PXM <W6PXM@postoffice.pacbell.net>
Message-ID: <37A8BFA7.EE3307BA@postoffice.pacbell.net>
Source record: 102125

I am in the market for a new dual band mobile. (2m/70cm). Extended receive is a plus but not necessary. I like what I see in the Yaesu 8100R, and the new FT-90, but frankly, with all I have read about the problems with Yaesu and their new products lately, I may not consider the Yaesu rigs. The Icom 207H looks OK, but it seems they are getting ready to drop the 2710H. (I won't consider the 2800H, too much baloney for me.) Also, cross band repeat is not necessary, although it would be nice to listen, or at least scan both bands at the same time.

I would appreciate any comments!
Thanks

I use a Kenwood THG-71A.

http://www.kenwood.net/products/index.cfm?AMA=open&ama_hheld=open&radio=TH-G
71A&selection=Amateur

This is a dual band radio, 2m and 70cm, and can run off 13.8 VDC or the
battery pack. I got the NiMH high power, 9.6 VDC 1050 maH, battery pack from
Maha.

http://www.maha-comm.com/products/nimhbp/kenwood/index-13.htm

I use the Kenwood VOX headset, which is powered off the cord to the radio.
Also the VOX can be turned off and you can use the PTT switch in the head
set cord. The VOX head set is real nice to use while driving, in VOX mode
its all hands free. For more power I use the dual band Mirage amplifier I
got used at a local Ham Radio swap meet.

http://www.mirageamp.com/amplifiers/bd35.html

I have been real happy with this radio.

I once years ago built a regulated dc pwr supply using an lm317k
that produced a 1.5v to 30v regulated dc outpt voltage. Thats no
big deal, but by thrrowing one toggle switch it became a
constant current output device. I cant remember how I did that
but would like to build another one exactly the same and dont have
a schematic to do it. Somehow I remember that the switch tricked
the lm317k into being a constant current device instead of a
reglated voltage device. Seems in back of my mind that the
output was taken off a different termingal (the one going to gnd)
or "sense" trmnl of the ls317k. Can anybody refresh my memory
on this as it made an ideal nicad charger (by using constant
current feature) and or throwing the switch the opposite way
when constant voltage was preferred.

Hello, I have a newly purchased FT-100 (allmode radio, 160mtrs to 70cm). Entire package ready for use includes ATAS-100 auto tuning antenna w/ Diamond Trunk/Hatchback mount for the ATAS-100 and the necessary duplexer. The separation kit w/MFJ speaker provides remote face plate mounting and operation. All original packaging and manuals as new. Must sell due to family emergency. This really is a great radio and I have not experienced any problems with this setup whatsoever and unfortunately need to sell it. Entire package bought new for almost $2,000, will sell as new for $1,500.00 shipped in the USA.

Thank you.

Has anyone have any experience with the radio shack simplex repeater. I am very new to this, how do they attach to your radio. I am from the Philippines and using a Motorola Pacer, which is a 3 watts, 40 channels, and operates at 325 Mhz. The unit looks very close to a GP-68, it even uses the same accesories. Will this radio shack simplex repeater work for my radio.

Try a 1/2 wave dipole across the wings by putting a 1/4 wave wire on each wing
fed in center. You can also use copper foil as the conductor. Remember the
dipole will be a shorter length than a dipole in free space. You will need to
trim for lowest swr, best signal.

2642. Connecting a TS-940S to an SB-200

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-04 00:00:00 UTC
From: tom <tsokol@injersey.com>
Message-ID: <7oak88$4p$1@nw001t.infi.net>
Source record: 102185

I bought an SB-200 a few months ago and am in the process of installing some Harbach mods (soft key, soft start, etc.) When the mods are finished I will be hooking the amp up to my Kenwood TS-940S. This will be my first experience with an amp, and I'm a little confused about the proper connections to be made. (The 940S manual has instructions specifically for their own linear, and the diagram of the REMOTE pinout is unclear to me.)

The SB-200 has an ALC out jack. I assume, from what I can see, that the center conductor of this jack goes to PIN 6 of the 940, and the outer conductor (ground) goes to PIN 2. Correct?

The SB-200 has an ANT RELAY jack. I'm not quite sure which pins I should connect this to. (The guy I bought the amp from said to just use a foot switch and press it simultaneously as I key the mic!!!!)

Any help from 940S owners who have connected their rigs to the SB-200 (or other non-Kenwood amps) would be appreciated.

Tom

Hi,
I have a very nice condition Icom PS-15 power supply. Can be used
with the following Icom HF rigs, and has nice Icom OEM look:
720/725/726/728/729/730/735/736/737/737a/738/740/745/746/751/751a/756
etc.
Provides 20 amps at 13.8V DC. Can be used with other brand HF rigs (non
icom)
with simple wire change at the DC power plug. Condition is very good.
Non Smoker.
Price is $89 + shipping. Thought it was sold but never received
payment, deleted
the other emails, so here it is again.

thanks,
Joe K7JOE

Try Yost and Co. The advertise in most of the ham pubs. I just found
their ad on page 64 of the August CQ magazine. There are other battery
suppliers also. If you're handy, you can try to break open the pack and
put in new nicads. Freeze it first and use a small ball-peen hammer
(gently grasshopper, gently!) on the seam. Buy tabbed cells and replace
all of them at once. I've done both for my Kenwood TH-77A. Worked both
ways.

From: Keith A White <n5rvz@swbell.net>
Message-ID: <37A8F137.780DCCC3@swbell.net>
Source record: 102194

I don't have a TS-940, but I have a TS-440.
The back of the amp has four jacks that you should be looking at.
1) Input - RCA Phono plug
2) Output - SO259? female of the PL259.
3) ALC input - from radio, phono plug
4) amp relay - from radio, phono plug.

I hooked my ACC from the radio using a DIN-5 plug into two phono plugs.
These plugs then plugged into the back panel of the amp.
My setup works great!
The hard part was trying to see how my ACC plug interfaced with the amp. Trying to find out the correct pinouts.

2656. 10 meter HT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-04 00:00:00 UTC
From: David Jordan <AA4KN@email.msn.com>
Message-ID: <e21waou3#GA.421@cpmsnbbsa02>
Source record: 102199

I'm looking for an HT that Henry Radio came out with several years ago that was for 10 meters only. Does anyone still have one in good shape that they want to get rid of???

Dave

2657. Re:HF Radio Wanted

From: Steven Jelen <skater@fnol.net>
Message-ID: <37A8F4AF.6D16787F@fnol.net>
Source record: 102200

I'm looking to purchase an HF Radio that will work 160-10 meters.
Kenwood,Icom,Yasue or Uniden

My price range is from $200-$500.

I DO NOT WANT A TUBE RADIO.

I DO NOT WANT SOMETHING MODIFIED FOR CB 11 METER BAND!

If anyone has what I'm looking for please e-mail me.

Thanks
Steve

Message-ID: <Hb8q3.1589$K8.15673@newsr1.san.rr.com>
Source record: 102204

I just recently had the RFI filter installed for my Ford Ranger to eliminate
the noise generated by the fuel pump. Unfortunately, it
didn't work. Therefore, I thought I would ask the group if anyone
had any ideas on how to reduce the noise. I've been able to
determine that noise is definately coming through the antenna.
Any ideas?

Steve, N6TGK

If you were to check the address from which it originates you would note
that the individual making the inquiry is likely **NOT** a native
English speaker. I challenge you to do as well in HIS language.

I assume that LT=Lithuania

I would think you might have similar questions in trying to manage a
foreign language and in reading the front panel of a radio with markings
in a strange alphabet and abbreviations that you have never seen before.

Don't be so quick to jump on someone.

Don't you have better things to do with your time???

2663. IC 751

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-04 00:00:00 UTC
From: crobinson@connect.IE
Message-ID: <002801bedecd$61a1acc0$8f806ac2@EI3FW.connect.ie>
Source record: 102206

2nd Request - the last wasn't in plain text and was a pain to read.

I have an IC 751 which I want to interface to my PC, I have an LCU3 level converter to go between the rig and the PC but the IC 751 needs an internal board known as a UX 14.

This board was needed for the IC751 and 271.

Although listed in some dealers web sites the UX14 is supposedly discontinued.

Does anyone know where I might get one and if not has anyone enough info on the UX14 to give me a chance of breadboarding an alternative ?

Thanks
Craig (crobinson@connect.ie)

Everyone,

I've got a mint condition Motorola ASTRO Saber Model III For Sale. It features the following:

Bandsplit: 406-470 Mhz (will go a bit higher..)
1 Meg Vocon Board which will support APCO-25 Flashing
DES-XL Module installed
255 Channels / 16 Zones / 16 groups
Motorola UHF Wideband Whip Antenna (grey code)
Motorola Hi-Cap Battery
All Serial/Model tags
Accessory Plug Cover w/screw
Original Box and User's Guide
Does NOT include charger

Supports MODAT, MDC-1200 Signaling, Scan, PL/DPL/RAT plus tons of other features....

Selling radio for only $1800.00 + 2nd Day FedEx COD Certified Funds. No trades, firm on price.....Serious inquiries ONLY!

Regards,

John,

Could you please take time to explain to the group just how your one-liner
reply was
supposed to help?

Tom was asking for help with equipment interconnections, on
rec.radio.amateur.EQUIPMENT.

What better place to ask?

Personally, I have a TS-940s/AT, and the manual is not too forthcoming on
the subject of
non-Kenwood connections. I know that the 940 keying relay can probably pull
the SB-200
into transmit and keep it there, but since I'm not sure, I remain silent,
keeping my ignorance
to myself.

Possibly you took courses of study that made you an expert on all kinds and
types of amateur radio gear?
If so, congratulations.. please share with us, and if not, please spare us
the snotty one-line reply, OK?

Geezus!

Gary
(and yes, I am licensed...)

Speaking of Kenwood Mics, does ANYONE have any idea how to repair that stupid modular, punched on connector that Kenwood so brilliantly chose to use on the mic for the TM-261A and similar VHF rigs?

The silly punched on clear plastic connector looks like something on a throw-away telephone, but no, THEY used it on the $75.00 microphone!

Now of course after a few months of use, mine is falling apart.

Is there some tool to replace that punched on connector or does anyone have any tips on repairing it?

If I have to buy a $75-79 replacement mic for this $199 radio after 6 months I will say "NEVER AGAIN" to Kenmore!

2674. Swap my VX-1R dual HT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-05 00:00:00 UTC
From: Mike not Mic <w5old@sonetcom.com>
Message-ID: <01bedf33$46141540$660231d1@default>
Source record: 102036

Please read entire context.....
The Yaesu VX-1R is the world's smallest dual-band handheld with Wide Receiver Coverage with wide VHF/UHF Multi-band Receive 76-999 mHz (cell blocked) It gets both TV bands, FM & AM broadcast, Air, Public Service, Weather, and of course 144-148, 430-450 MHz. Includes 290 memory channels in 9 Groups with 6 Alpha-Numeric character Display. Built-in CTCSS Encode/Decode with Back-lit Keypad and big LCD display. 50mW or 500 mW Power Output and kick it on up to (1watt w/ supplied wall charger/powersupply.) This little fellow charges in 2 hrs and you can operated it as it is charging. Runs up to 14 hrs of a single charge. Dual watch feature and built-in CTCSS/DCS Tone Search Feature. Smart Search Function. One Touch ARTS Feature (Automatic Range Transponding System). Includes Lithium Ion Battery Power Adapter / 120 minute charger. Size 3 3/16" H x 1 7/8" W x 7/16" D. Weight 4.4 ounces with Antenna and Lithium Ion Battery. This radio is like new! I just don't have a use for this little dude. I've added with a itty bitty shorty antenna for those tight spots.
Oh by the way I also have a HTX202 2M HT with added hand Mic for trade too!
Wanted for it...choices are in order of merit...
MY LIST:
1. The latest Azden 2m HT, what ever the model # is. The big dude!
2. TenTec or rather TenKit 2m Mobile the Mobile with the High Power Kit installed.
3. Alinco 160 2m HT with a ample supply of batteries or something that improves its value.
4. Or if you got something you like to trade and the Yaesu ain't enough to to fullfill your needs I can kick in the HTX202
5. If you just want the HTX202....hey throw me a offer.
6. I'll trade both for one of those new AZDEN 2m mobiles.

I have the Kenwood TS-530s and want to know is there a product on the market that will allow me to decode and read cw as words either on my computer or as a stand alone unit? I have found units that will send type from a keyboard as cw but not the other way.

100 CABLES Clint!!!!! Are you the same Clint who
claims he is not trying to develop a ADMS clone?
I guess this blows your cover. Why would anyone
need 100 cables unless he was:

1. Planning to develop his own program or
2. Planning on cloning some disks.

You are busted Clint

RJ-45, as is used in computer networking. A well-equipped computer
store or electronic-parts store should have a RJ-45 crimp tool. To be
honest I don't remember what I paid for the last one I bought - it may
have been rather expensive.

(I agree, I'm not impressed by the current trend to use these as mike
connectors. But I suppose they don't require as much labor to install,
so you can say goodbye to the round mike plugs...)

2682. Re: Bad FT-100 Yaesu

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-05 00:00:00 UTC
From: Matthew Williamson <sales@texastowers.com>
Message-ID: <9Uhq3.96$yF4.620@news.flash.net>
Source record: 102044

Hello all,

Well, to be completely honest, I've never seen a new radio spend 6 months going back and forth, though I suppose it has happened at times. (There was the time about 10 years ago where I sent a used FT-757GX back seven times before it was fixed right, but we won't go there)

There are several issues involved in replacing a radio. One of the most troubling is that about half the radios that we get back with a replacement request have been improperly modified for out of band use. If a guy wants to modify his radio, that's certainly within his rights, but it's not reasonable for a guy to botch a mod job and then request the radio be replaced, claiming it was DOA.

The problem in these cases is that even if the manufacturer agrees to replace the radio they may decide not to when they find out the radio had been damaged during modification (and it's hard to blame them). In these cases, if the radio has already been replaced with a new one, what does the dealer do? They can either sell it for a used or "demo" radio at a discount, or they can package it all back up nicely and lie to the next customer and tell him it's new.

The problem is that if every customer who requested a replacement radio got one, the losses from selling the repaired radios at a discount would cause serious financial problems. There simply is not enough margin in this industry to support that kind of service. If the margins were higher, we'd see more replacement policies. We'd also see "remanufactured" radios offered for sale, like you do computers and power tools. As it is, there are no "factory reconditioned" ham rigs offered for sale.

As a consumer, I obviously hate it when something breaks and I have to send it back for repair, but that's what the warranty is for. It's also why I purchase brands like Icom, Kenwood, and Yaesu, instead of Radio Shack, ADI or Alinco. It's the same when I buy a computer, I'd rather spend a few bucks more on a Compaq or Toshiba than on a CTX or an "Arnold's Computer" brand. I feel my chances of QC catching the bad stuff is greater with a famous brand.

I can't speak for other stores, but our policy is that if the radio is DOA, we'll replace it with a new one. If the radio dies a few weeks into life, we can usually get the manufacturer to agree to replace the radio. Most require that the request is made and that the radio is returned within 4 weeks of original delivery. This would typically mean the radio died within 3 weeks of delivery. After that, the radio has to be sent back for warranty service. There are obviously a few exceptions that have taken place, but by and large, this is how it works.

When we do replace a radio, we send it back to the manufacturer for replacement. They send us a new radio that we put in stock. There are some cases where they will not replace the radio. In these cases, we either put the radio out on display (many times on very popular models, we don't have a display model until this happens-we're still waiting for a VX-5R), or offer it as a "demo", with the full factory warranty, at a reduced price. One of our main concerns is that you get a radio that's new and "factory-sealed" -one that another guy hasn't fiddled with.

2688. Ameritron AL-1500 v/s AL-1200

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-05 00:00:00 UTC
From: bbwolf@my-deja.com
Message-ID: <7ocie9$l2h$1@nnrp1.deja.com>
Source record: 102050

Howdy folks,

Well, I'm ready to shed my trusty AL-80B for a legal limit amp. Only I'm having a devil of a time choosing between the AL-1500 and the AL-1200. On one hand, the AL-1500 provides full legal output with only 65 watts input. But the 8877 tube seems to be somewhat "delicate" as compared to the 3cx1200A7 tube. On the other hand, the AL-1200 has an extremely rugged tube, instant warm up and is less expensive but requires a full 100 watts to acheive full legal output. Please let me know what you think. All responses are greatly appreciated. Please feel free to e-mail with your reccomendations.

Thanks,
Rich

I have had my FT-100 and ATAS-100 antenna system in a mobile installation for several months and have been very happy with the radio and antenna. I have not had any problems. I use it for mobile only operations and mainly on hf (I already have a 2/70 mobile). It has a great noise blanker which is a must for mobile work.

I don't think I would get one for a fixed station because the size is just too small for me for that type of use and because of the size there are not enough front panel controls so you have to bring up the menu functions more often.

But the size issue makes it ideal for mobile or portable operation.

I have not had any problems with the radio so far and use it almost every day.

Thanks for the other side of the coin Matt.

Others please note that at least Matt was willing to put up his name, e-mail address, and call sign which is more than can be said for the gentleman making the complaint. Most of the time I don't pay any attention to such a post when the complainer did not have the fortitude to at least identify themselves. It shows they have something to hide or are just trying to cause trouble.

For those of us that deal in english - here is a link that gives you the programming schematic for the ribs - tower electronics does have the 4 conductor plugs available for 8 bucks + shipping - they are molded plugs with molded cord attached - strip the wire for whatever conductor you want and you are in business -

http://www.icongrp.com/~sllewd/pcware.htm

also on this web site is free software that programs most yaesu radios- including vx-5 it works great - even better than the yaesu crap software full of bugs - and it is free -

http://www.icongrp.com/~sllewd/download.htm

I just got a VX-5 and I am waiting for my plugs in the mail- then i can pc program the radio - instead of waiting for yaesu to get off thier duff-I also ordered a few extra 4 cond plugs for wiring to external speakers - etc.

Go here for some sound card programs.

There are also some devices that will plug in the speakre and read the code on a lcd screen. Not sure , but maybe MFJ has a modle that will do it.

There are several interface boxes that can be hooked between the radio and computer to do the conversion of cw and also some that do many modes such as rtty and packet.

You could own your own radio station. Have you ever been on the AIR? Now you could have your own radio station. You can promote new bands, play music or talk about news.

The house is nice too. It has a large living room. The picture window gives a panoramic view that is breath taking. There are many outdoor activities close by. It's 20 miles from a vary popular state park. Not far from town.

Radio Station:

FCC Licensed
WSPE 88.3 FM
85 foot steel radio tower
Transmitter
Control Panel
Microphone
Computer System (Automated Radio Station)

House Description:

Modern house as shown in the picture on the web page. Situated in the woods with a window view that overlooking several mountains. Mature 20 acres hardwood forest.

For more information:

nova wrote:

> The title say all.
> Thanks Nova

Hi Nova,

Please ignore the trolls.

SSB stands for Single Side Band also known as A3J which is the standard mode of voice modulation for most of the HF amateur bands these days. As pointed out by another user, it is better known as single side band suppressed carrier. Normal AM (Amplitude Modulation) is double sideband with carrier. SSB is much more efficient than standard double sideband with carrier as it concentrates most of the rf into the intelligence portion of the signal.

CW stands for Continuous Wave. If it is just a continuous RF carrier that has no other modulation and it is not switched on and off to send a message it is known as A0. However, it is most often used to designate the using of Morse code where the operator switches the carrier on and off using a key or keyer to form dots and dashes to talk to another operator. When it is used like this it is known as A1.

VOX - Stands for Voice Operated Transmit. This is a feature that lets radio operator switch from receive to transmit automatically when they start to talk into the microphone without having to press a button or flip a switch. The sound of their voice activates the transmitter.

Hope this helps

Ouch!

I just got called by Ford telling me the filter they ordered is in and ready to be put in my Explorer. Did it help at all?

Seeing how it is coming into your rig through the antenna I would start by looking at it as trying to prevent it from being broadcast in the first place. The fuel pump is internal to the gas tank so that should provide some isolation of the rf. The power leads for it may be what is radiating the signal. Can you get to them very close to where they come out of the gas tank and put some of those snap around ferrite suppressers on them? I am talking about the ones that come some computer or phone equipment.

Tom,

Don't be shaken about being confused how to hook up the amplifier. The ham that mentioned the footswtich is not way out to lunch though. That is an option. We have done that at field day whne the T/R relay quit in a TS-830 (actually just used a piece of hooup wire to gnd). What you need to do is connect the the transmit relay from the rig to the relay input on the amp. The footswitch the other ham suggested takes the place of the relay in the rig. The relay in the rig is keyed from PTT. I am not 100% sure, but most amplifiers expect to see the relay input grounded to activate it (some, notably the Collins 30L-1 have significant voltages at that pin however) Connect the normally open relay contact from the 940 to the amplifier relay input. Connect the common from that same relay output to the shield of the amp relay input.

You do not NEED to hook up the ALC line. The ALC (auto level control) is a voltage fed back from the amplifier to the radio to limit the drive to the amp when a predetermined limit is reached. The problem is the voltage that is returned and which is expected varies between amplifier and rig designs. Bottom line is that if you feed a linear and unclipped signal into the amp and follow the tuning instructions you will be all set.

TT Bird,

The AEA line of packet intefaces, specifically the MBX 232, will decode CW for you. There are also morse readier that have been built and sold by others. You should be aware of these facts before you go off and buy one.

Morse is not really amenable to computeized decoding except at very slow speeds because it is almost never machine sent! Yes, you can copy ARRL practice sessions pretty well but normal conversations are too variable in their sending speed! And you can invest some time and energy and learn to copy it on you rown for less than you'd pay for the hardware!

I'll tell you who. It is the same guy who had the Web site with the FT-100 mods and also
a Banner for "TEXAS TOWERS". He posted that he liked the radio and it failed twice and after the 2nd time being back from Yaesu i think it failed again and he said forget it. He then tried to get his $ from Texas Towers and Yaesu.
I think he is consulting a lawyer at this time but I am not his buddy. I have to agree with him that after all the negative press on the "ONELIST" (Web page with guys saying thir radios are dying everyday and comparing serial # and turnaround time from Yaesu) . This Guy has a good attitude
and supported Yaesu and Texas Towers.
Now if you go to his Web page he has pulled down the Mod sheet for the FT-100 and Pulled off the Banner for Texas Towers.
He has no other banners on his site so it was pretty easy to figure out who it is.
I support this guys efforts to get his hard earned $ back. There is no excuse for all the FT-100 failures. I knew three guys who got their $ back from HRO (I was shocked also) I figured they were wasting thier time but They got $ back.
Go figure.

Bruce is dead right , I might add that you should learning Morse first
before relying on those units.

I use the AEA MBX232 for Morse at about 85 wpm but in reality, that's just
like continuous packet. The problem is that you can't type that quick so the
conversation lacks any flow. Around 20 WPM though it really is nice to be
able to see the mistakes the unit puts up on the screen. If you can hear it,
register it and then see it, you'll learn it quicker BUT, you must learn it
to start the ball rolling. How else can you recognise a mistake? There's a
big difference between six and sex if you get my point (:-))))

Dear, poor ignorant Gerry:

If I had 100 proven, solid, well-made ADMS-compatible cables, I would sell them at my cost, plus no more than $2.00US, plus $3.25 for 2-day shipping to anyone who needed one. (Foreign orders will need to ship differently - and that postage charge would change accordingly.)

>>Planning on cloning some disks...making your own program...

I would never participate in the illegal distribution of anyone's software products. I have never been involved in the creation of any software program for programming anyone's radios.

I would simply be providing a service to the amateur radio community by providing such cables. No real profit-making to speak of. Nothing sinister. Nothing underhanded.

Sorry you have so much problems with my very public online presence, Gerry. I siggest you get a life for yourself, and stop searching for my name in the newsgroups.

I'll admit it... I have the Texas Towers banner on my web site, and I
LOVE my FT100. Oh, and MY name is Mark. Never had a problem with my
FT100, and I would more than happy to have another!

On the same subject, is anyone interested in a Millen 90651 GDO in apparently perfect condition? Has original plastic case and manual. I am helping with an estate sale. I don't know what they are worth today. I have seen prices all the way up to $200. I would say this one is as good as they come. Send me an e-mail if interested.

2718. Need channel elements for Motorola Motrac repeater

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-05 00:00:00 UTC
From: Joe K7JOE <k7joe@yahoo.com>
Message-ID: <37AA21B6.D5DC1295@yahoo.com>
Source record: 102080
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Hi, I have a Motorola MOTRAC UHF repeater -- currently on
462/467. What will it take to get this repeater on 441/446
aside from channel elements or crystals? Will this thing even
tune into the ham bands? I'm told it will -- how difficult
to retune? What is expected sensitivity. It's a 12W PA, with
an outboard 60W tube amp. Seems very rugged/heavy duty.

Want to buy the channel elements.

thanks,
Joe

Take the mic cable and all to a computer cabling outfit, a 2 way radio shop, or anyone who installs telephone equipment and ask them to please crimp on a new connector.

Those pesky plugs are the industry standard in the commercial radio business and have rarely been a problem -
If it is an RJ11 - 6 pin conductor you can buy a 6 pin crimper for about 20 -30 bucks (buy a nice one) and you can get the plastic pieces fir about 2 cents each.
You make note of the wire sequence (1-6) and cut the old one off - insert the line into the stripper into the deisgnated stripper - measures length - and strip - insert the wires into the plastic plug - crimp it and you have a new plug-

I would never want to go back to the old mic plugs - they take way too long when broken - i can recrimp a new plug in under a minute -
if they are an 8 pin plug - get an 8 pin crimper - most mics are standard at 6 pins

I just had a Kenwood TM-V7A dual band mobile rig die on me this week. Only 14 months old, conveniently 2 months out of warranty. Just tried to turn it on, and nothing. All fuses are good and I can measure correct power all the way to the PC board. Anyone else out there ever have trouble with a TM-V7A?

Yes, yes, it will, it is also on the Japan ICOM web site.
The ICOM engeneers are not so good as RT Systems, but
it will work.

And even this will work:

http://www.hamradio.cz/rigs/novaradia/icom/ic-q7/iface.gif

Can you belive it, only 2 transistors, 4 resistors and
2 diodes, you can make it in 5 minutes.

> Got any references in the English language?

I don't thing that for such simple circuits you need
some detailed explanations.

It is just a simple TTL<->RS232 level converter, they
are described in any electronic book.

If you don't trust ICOM or other HAMS, you can look at:

http://www.icongrp.com/~sllewd/pcware.htm

for the circuit diagramm from the original ADMS 1D/2D
cable, with english reference. I have checked it with
my Original cable from RT Systems, the circuit diagram
is OK.

This will cost a little bit more, maybe 4,00 USD and
you will need about 15 minutes to assemble it.

OK.

I don't thing he has anything against it, that I have
told him that also other Software exists, he can test
everything and then chose, it is free after all.

And some freeware programms do have some futures that
the ADMS does not have, and the ADMS has some stuff
the Freeware programms don't have, logical.

You can get one directly from the source, at
http://www.rtsars.com/ complete with "stable, proven,
Yaesu-endorsed programming software for a Yaesu HT"
for about 40,00 USD

Or you can make one for about 4,00 USD, the original
circuit diagram and explanations, partlists, pictures,
all in fine english language you can find at:

http://www.icongrp.com/~sllewd/pcware.htm

You can find a lot of amateur, nonproffessional
Freeware software on my pages, without limitations
for Frequency entering, Software mods included, ...
Software for Linux, DOS and Windows, some sources
are also public.

If you need any assistance for contacting
RT Systems, please contact Mr. Clint Bradford,
he can point you to Free telephone Nummbers to
call RT Systems free of charge.

Hope this helps.

You might want to consider a Alinco DR-610TQ. I bought one a few months ago, and I am very satisfied with it. It has all of the bells and whistles that I need and then some.

Ok ,
I will admit 6 months is a long time for anyone to be asking for a
refund. But what if it takes 6 months to get in and back from the
manufacturer several times and It still is not working as it should?

What is the position of the dealer.. Does he say " Too bad.. it's past our
warranty period. Call the factory?" or does he provide a SERVICE and
assists the buyer as long as he can (within reason) to make sure he does
business with them again ?

WE CAN BUY HAM GEAR FROM ANYONE. The only product a dealer has is it's
customer service, or lack thereof.

I am looking to buy 2 to 4 Icom F40LT's, 430-470mhz, 96 channel, with keypad. Would also like the voice scrambling cards.

Should be in great functional/cosmetic condition and include programming software and cable. I will also consider less than great cosmetically as long as perfect functionally.

- thanks

2741. Re: Is the FT-100 Yaesu a good radio?

Source record: 102226

I have the original 706 and have recently purchased the FT100. The FT100 is a much better radio. The receiver is substantially better, and more importantly the menu system works much more logically. I understand that the 706 MKIIg has numerous improvements over the original, but the FT100 still got my vote after I scoped them both out at Dayton.

Source record: 102227

Hello,

I'm having a problem accessing the autopatch and signal strength functions on the local repeater. The keypad on my mic doesn't seem to want to work when the PTT button is depressed. If the PTT button isn't pushed, it operates just fine. Hoping that I can find some help here before I have to call the company I bought it from and have them send me another one. And no, the 16 key lock isn't enabled.

ICOM 2100h 2m mobile transceiver with ICOM HM98S microphone

Thanks in advance,

Mark Austin KC8LBS

Yes, that is correct :)))

He could also get a compatible cable from some 3th
party company, I have seen several on the web,
offering comaptible cables.

2754. Need Advice: Best 20m cw Xcvr QRP Kit Rig?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-06 00:00:00 UTC
From: kelly@dvol.com
Message-ID: <37aa5a76.3095418@news.dvol.com>
Source record: 101948

I'd like to build a 20m cw xcvr for portable/vacation operations. There are lots of kits out there but sorting out the advertising hype is a bit difficult to say the least. The ideal rig would pump out somewhere around five watts, I'm not interested in QRPP work. I consider sensitivity, selectivity stability and front end dynamic range important characteristics. Cost is not a big factor, I'm willing to pay for performance, but I'm not interested in popping $500. Some kit in the under $200 category would work.

I have zero experience in this facet of the hobby and would appreciate comments from those who have been there.

TNX in advance,

Brian Kelly, w3rv

2757. FT-51 stuck in reduced xmit mode

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-06 00:00:00 UTC
From: lee810@aol.com
Message-ID: <7odv24kfq1@nnrp1.deja.com>
Source record: 101951

I recently purchased an FT51R and am having a problem with it. I have the ADMS software and programmed a few channels using the software. While changing the battery, I noticed that all my memories had been wiped clean. When I attempted to download the file again, the template would no longer work so I had to create a new one. The file then downloaded OK, but the radio will not transmit on 146-148Mhz or on 440-450 Mhz. Only the bottom half of the 2M and 70 cm bands will allow me to transmit. I've since tried clearing memory with the procedure stated in the manual and everything gets erased, but I am still restricted on transmit. It seems that the radio has taken on a new bandplan, perhaps for a foreign country. The repeater offsets are still correct for North America. Any suggestions on how to fix this?

I read everything I could find on the mods for the FT-51 but nothing explains what may have happened. I did not attempt to mod the radio.

On the web page,

http://www.ocpapsych.com/ft51mod.htm

There is a 'softmod' that allows you to see the band that the radio is set to. Mine is BAND 0. I don't know if this is the North American band or something else. It will not allow me to change the band using the up/down Mhz keys.

Any suggestions would be most welcome.

Thanks,

Lee Devlin, K0LEE

Date: 1999-08-06 00:00:00 UTC
From: Owen Adair <owen.adair@NOSPAM.turner.com>
Message-ID: <37aac9ae@tbsnews.turner.com>
Source record: 101961

I walked through the Ten-Tec factory a couple of weeks ago when I was up there on vacation. I saw this rig in development, but I didn't operate it. It looks cool, though... Should be a lot of fun during the next sunspot cycle.

I was impressed by the company and their processes. Certainly made me put them back on my list of rigs to consider the next time I have some extra money...

Anyone operate the '526 yet?

I am in need of the owners or preferably the service manual for an RCI Ranger 2950.
I emailed the RCI service department twice getting the email address from thier web site and both times it was returned. I would be willing to pay for any and all copying, labor and shipping costs. Or if anyone has a good email address that would work also. Thanks for you time!

Well, it's very interesting...

No-one wants to rent the nut tool, but everyone wants to buy one, so here goes nothing:

(For those who've missed this "lively" thread, please see below for my description)

I know I offered to tell you where to buy the tool, but the guy I get them from doesn't really want to sell them onesy, so I'll act as middle man.

For $34 (money order or cashier's check, no cash please) I'll ship you your very own nut tool, to keep, to cherish, TO SHARE!!! If you don't like it, return it unharmed and I'll refund your money, less freight.

That's the best deal I got, and I ain't gonna get rich on this one, I do it simply to stick-it to the "establishment" that wants to charge upwards of $90 to loosen a nut.

If you're interested you can contact me via mail, email, or phone:

Neil Rosenberg, N1DMA
NeilR@innermedia.com
60 Plain Road
Hollis, NH 03049
(603) 465-2788

The supply is limited, so act soon. Be sure to check with me before sending any money, to make sure I haven't run out!
==========
The fine print:

I have in my posession a tool that is positively brilliant at loosening/removing/tightening those annoying circular "nuts" that you'll find on various Kenwood rigs. Yes, you know the ones I mean, the ones that no amount of coaxing with the tip of a screwdriver will budge. I've been told (but haven't confirmed) that the same nuts are found on many Icom, Yaesu and other rigs.

Why on earth would you want to remove this nut, you ask? Well for most of the affected Kenwood rigs, it's the ONLY way to get to things like digital front panels, lithium batteries, and so on.

You can see a photo of the tool at:

http://www.mv.com/ipusers/innermedia/kenwood/spanner.jpg

Disclaimer:

I make absolutely NO warranty as to the applicability, performance, or safety involved in using the tool I send to you. If you damage your rig, or yourself, that is totally your responsibility. If you void your warranty, that's also your problem. THINK BEFORE YOU ACT!

If the tool is not as I described it, if you chicken out, or if it doesn't fit your rig, contact me, and I'll refund your entire price (less my UPS cost) as soon as the tool is returned to me undamaged. In other words, treat me fairly, and I'll return the same.

Neil, N1DMA

I have a 1996 Ford Ranger 4.0 and it worked on mine just fine. I have
read in the Ford Explorer news group, which are made on a ranger
chassis, where some had two filters installed to rid the noise.
I can say the fuel pump noise was over S-9 in my truck and now I
barely hear it. Some have installed coaxial caps in the power lines
to the pump, but you had better purchase a good name brand if it
breaks you will be under the truck restoring the wires.

I believe this gentleman has a problem differentiating between ADMS
"templates" and "rdf" files. He goes on to state that he DID make a copy
of a template, but re-named it as an rdf file.

>"errormessage: Frequency to synthesizer values corrupted by previous
> software version have been corrected..."

I have never seen that one before.

Dear Paco:

Primero, SOSTENGA su directorio entero de ADMS!

1. Realice una " RESTAURACI&#65533;N PRINCIPAL " de su HT.

2. Entonces cree un modelo NUEVO de la radio.

3. Programe sus frecuencias, cercior&#65533;ndose de que usted utiliza el
TEMPLATE nuevo.

Sepamos si ese los claros suben su problema.

Jim,

I have the new Yaesu FT-90R and have had 0 problems with it. I think I've had it just over six weeks now. Its been a good little radio. I had the FT3000M prior to this. If you're cramped on space the FT-90R is definately the way to go. I haven't purchased the ADMS software for it yet. So far I only find two things about the radio I don't like that I had with my FT3000M: 1). The LCD display doesn't display tone status, enc/dec... All you get is your freq/alpha name and a choice of an S-Meter/Function key assignemnt or a voltage meter. 2). The function keys on the front of the radio are user programmable but only for a select number of features. I would like to be able to program those keys with any function of the radio, things like memory channel skip you still have to work your way though the menu for.

Actually Clint I don't search for your name. What gets me going
is the nasty superior tone you affect when someone asks a
question about ADMS software. I don't care much for your fast
and loose attitude about facts nor do I care much for your snotty
attitude toward me. What I find particularly offensive is misquoting

what I have said or just outright lying about what I have said.
This is the reason I will never respond via email because you
have repeatedly lied about what I have said in an email.

Since you have as you describe it a very public online presence
then you will have to live with some very public online scrutiny.
Sorry OM but that's just how it is.

Thanks for reading this post. I have for sale/trade the following items: 3-10 ft sections of Rohn 25G, 1-9 ft flat top section of 25G, Rohn TB-3 thrust bearing (unused), Rohn rotor plate for the 25G (unused), Glen Martin hazer for the 25G with the heavy duty thrust bearing, Cushcraft X-7 yagi with the 40 meter add on kit. All of the items were purchased new in July of 1998 and are in excellent condition, cost new was over $1800.00. My QTH was sold and all items are in storage. I will consider parting out these items, but I would perfer to sell everything as a package. I will consider delivering it within the D.C. metro area, or you can pick it up in northern VA. Best cash offer or will consider trades, laptop computer, computer equipment, or other ham related gear. 73 Jim.

If you would have bothered to read the related earlier posts, you would have seen there were other costs incurred in the shipping besides just the FedEx charges. You would have also seen in the original posting you replied to that Roland Geter AGREED to the costs involved before the package was shipped. Roland Geter is a creep, he has ripped off more people on these newsgroups then you could imagine. Be thankful this guy is warning the rest of us so we don't get ripped off. Why don't you get into a business agreement with Roland Geter and find out for your self.

You would have to know the Millen equipment to understand. It's like comparing a Hewlett Packard scope with a Heathkit. I owned an Eico GDO for several years, and it was a nice piece of equipment, but nothing like a Millen.

Gang, someone is sending me a DX-60A transmitter without a manual, but I do have a DX-60B manual. Any electrical differences between the two which would cause the 60B schematic to be uncompatible with the 60A transmitter?
73, Jeff KH6O

Cross-posted to: rec.radio.swap,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

You need one to remove the retaining nut from the large round 8 pin mic jacks. On the TS-850S the front cover will come off without the tool (if I remember correctly) but you have to remove the mic jack nut to get the front panel off most of the mobile rigs.

You can use a pair of the bent-type long nose pliers (mine are Xcellite) with fair results, but some are so tight that you have to have the tool.

Source record: 101991

Hi All,

I have for sale a complete 350 watt VHF Motorola Micor RF PA. It is continuous duty, and you don't need any additional cooling to do it. The unit came from a base station, model number B93RCB-3105B. This auction also includes the high power power supply TPN1131, low power TPN1132(one of the caps on the back is slightly damaged), external and internal metering panels TLN1075 and TLN5706. Also includes a TLN4198, TLN5705 and TFD6090(I don't know what these are) Also includes all the wiring. The unit includes two 8560 tubes. This unit was removed from service working, but has sat for several years. I haven't tested the unit, because I don't have the knowledge or time to, so the unit is sold as is. Also, the High power power supply is REALLY heavy, so I am unsure if it can be shipped UPS, so if you are close, with in 2 hrs or so drive, or want to meet me within the 2 hrs driving range, we can do that. Payment in the form of a Postal Money order is preffered, other froms will wait for bank clearance. Buyer is responsible for shipping costs, and any SPECIAL packing costs (Such as the High Power power supply). Please E-Mail all responses.

Thanx
Mike

Don't bet that the cable isn't the problem. I struggled with this one for nearly a year - finally, was able to compare programming failures with my original cable to NONE with a new cable. By flexing the cable, I found the ground lead was a cold solder joint. Fixed it in a motel room with a hastily-acquired RS soldering iron at Dayton.

Three mos later, smae cable failed again! This time, the RED conductor parted about a foot from the quad plug. Cut out the damaged section and found the break upon dissecting the cable. Works perfectly now everytime.

I must have had a bad cable - it had never been handled roughly or pinched. Looks brand new today, except for the splice!

Arthur Shulman.

Hi Folks,

The 7036 has the same pin-outs as the 6BE6, but it's not exactly the same electrically. The 7036 (like the 5915) was designed for computer applications and the "signal grid" (pin 7) has a sharp-cutoff characterstic, not the remote-cutoff characterstic of the 6BE6. The 7036 makes a usefull substitute for the 6BE6 only in circuits that do not apply AVC voltage to the signal grid (pin 7).

Following modifications are possible:

1. Wide band reception (Conversion A) - K destinations outside 800Mhz band
support
2. Cross band repeater (Conversion A and B) - Completed with K destination
measures
3. Page answer back (Conversion A and B) - Completed with K destination
measures
4. DTMF remote - Operates even without conversion, but some items function
when Conversion A and B are made.

Conversion location:
Remove the power cord from the main unit, remove the upper/lower case, flip
down the panel, then operate.

Factory setting destination jumper table
Bit Destination (K, M, E)
3 R542 (W501) O X O
2 R543 (W502) O X O
1 R544 O X X
0 R546 O X O

(O: Jumper, X: No jumper)

Conversion A - Reception wide band (already dealt with for M destinations)
E destinations - Eliminates mounted chip jumper resistor R546 (0 Ohm)
```

K destinations - Cuts the mounted jumper wire (W501)
Conversion B - Repeater/answer back (Already dealt with for K destinations)
Chip jumper resistor 0 Ohm added (R92-0670-05) - The chip removed in
Conversion A can be used in Conversion B. When adding or eliminating the
chip jumper resistor, be careful not to peel off any of the printed cicuit
pattern and not to harm any other parts.

ALL THESE MODIFICATIONS ARE THE RESPONSABILITY OF THE OWNER !

2819. Alignment of MULTI-2700 (KLM & FDK) ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-07 00:00:00 UTC
From: No_Spam@No_Site.ca
Message-ID: <8GXq3.33$K72.278@198.235.216.4>
Source record: 101888

I recently picked up a fairly sick MULTI-2700 two-metre multimode transceiver for a re-build project, and would appreciate it if anyone could provide me with the alignment info for the transmit section. My version of the radio is marked FDK, however my research on the 'Net and at the DejaNews archive suggests this radio was also available from KLM.

One of the problems the radio had when I obtained it was a very slow rise of the output power when switching from receive to transmit. The time from when the mic button is pressed to the time the output power finishes rising is about 2 seconds, on both high and low power. I traced this to a corresponding slow rise in the 9.8V TX power supply line from module X16 into module X9, the balanced mixer and low-level RF section. The radio's main T/R switching is accomplished with a relay, and it pulls in instantly and solidly.

Upon inspection of module X16, I discovered that TR7, the SCR labled M2IC had been replaced with an ECG 5404 during a previous repair. The previous owner indicated to me that it was after this repair that the slow response time developed. This SCR is across the zener in the base of the pass transistor that supplies the 9.8 volts, and the trigger of the SCR goes through 10K pot VR6 to a pickup coil on the RF output stage, module X10. I suspect that this is the ALC circuit, where VR6 sets the level of the rectified RF that is fed to the SCR's trigger. When I disconnected the line going to the SCR's trigger, the rise of the output power when switching to transmit on FM was instantaneous, since the 9.8 volt TX power to module X9 rose instantly to its proper level when the mic button was pressed.

I have tried to get the specs for an SCR with the part number M2IC (or M21C), but haven't had any success. I suspect that the ECG part is not an appropriate replacement, and is causing the poor TX response time. The only way that I can get anywhere near the specified output power is to turn the level from the pickup coil's rectified-and-filtered output to the SCR way down by adjusting pot VR6. I can see the RF output level rise and fall while adjusting the pot.

I also had to replace 500 ohm pot VR1 that sets the DC base current to the driver, and 100 ohm pot VR2 that sets the DC base current in the final. The original pots had oxodized to the point where their settings would not hold. All the TX power problems existed BEFORE I changed the pots, so the trouble is not related to their replacement. Their current incorrect settings will definately be a contributing factor NOW, though!

There is no alignment info supplied with the radio's documentation. Just a basic description of the radio's circuits and a block diagram in

the user's manual. The supplied schematic gives _SOME_ DC voltage levels at various points, but no RF levels or alignment info. If I could obtain the alignment info for the RF output module X10, and an idea about how (and when) the SCR is expected to respond, I could probably get this thing finished. Specs for the original SCR probably wouldn't hurt, either!

I would appreciate any assistance anyone could provide.

2820. Re: Need Dual Band Mobile Comments

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-07 00:00:00 UTC
From: k7obb@aol.com
Message-ID: <19990807105037.23639.00006149@ng-fz1.aol.com>
Source record: 101889

Hi Jim,
Just my 2 cents. Lots of people don't like Alinco but I have 2 DR-610s and have had very good luck with them (I also used the previous models DR-590 and DR-600 with no problems). They'll do everything all the others will do - extended receive, x band repeat, etc., and Tech America sells them for $409.

Good luck and 73,
Dana K7OBB

2821. Re: Bad FT-100 Yaesu

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-07 00:00:00 UTC
From: Matthew Williamson <sales@texastowers.com>
Message-ID: <ISXq3.75$ya5.576@news.flash.net>
Source record: 101890

Well not quite--and I guess it irks me too.

> I asked to see a
> IC-706mkIIg to compare it with the Yaesu because they did not have one on
> display.

I'll admit that we don't have an IC-706MK2G on display. Until a few weeks ago we had an IC-706MK2 out, but sold it recently since it has now been discontinued. The IC-706MK2G has been popular enough, and supplies limited enough, that we haven't yet put one out. I would anticipate having one on display within the next 2 weeks or so.

> I explained to them that I had heard of many users were experiencing some
> levels of problems with the Yaesu, I then asked about what problems, if any,
> had they heard about. Texas towers says " ..We had heard of NO problems and
> they have sold hundreds without any problems whatsoever."

You were NOT told that we had sold several hundred and had heard of NO problems. I heard the conversation myself. Gerald told you that he felt the rumors of all the FT-100 failures were unfounded, and I agree with him. He then said that we've sold about 100 units, and he wasn't aware of any problems. If it's so hard to believe that Gerald hadn't personally heard of any problems with the FT-100, then why did you ask what problems "if any", we had seen?

I did some research. To date we've sold 63 units (not 100 as Gerald guessed). I searched the repair log for all Yaesu repairs this year. There was one, SN: 9E031544, sent back to Yaesu in June. That's it. That's a return rate of 1.5%, well within the range of acceptable.

As far as the IC-706MK2G goes, we've sold 30 to date, plus 41 of the IC-706MK2. I searched the repair log and found only one repair. This is a return rate of 1.4%. Interestingly though, this failure was caused by a ribbon cable that was damaged during a mod, so it's hard to blame the radio.

I thought I'd also check on the VX5R, which is also rumored to be a radio will all kinds of problems. To date we've sold 203, with two returns, that's lower than 1%!

I remember looking at return rates back in the early 90s. It was common to see the return rate as high as 4%. From my point of view, a return rate of 1-1.5% is excellent. I'm sure there are individuals who have had problems, even multiple problems with all of these radios. The fact is that there were always problems, and there always will be. The difference today is that the internet offers a convenient forum for the communications of these problems.

From my point of view the internet lets more people become aware of fewer problems.

If you have programming software, set the offset in the software and download it to the FT50.

If you do not, press the (F) button and the 6 (RPT) button. turn the knob to the desired offset (- or +). Press the PTT to exit. Store the frequency and offset by pressing and holding the F button until the display flashes. Let off the F button and push it again.

LOL

If I remember, you and Gerald agreed that you had one on display and don't know where it went to.
All I wanted to do was look at it, you did not even OFFER to let me se a box with one in it.. You admitted to having several in the box for sale. I don't buy a box of bricks. I like to look at it before I pay my money and take it home to find there is a crack in the LCD or whatever..

I asked about problems to find out about other undocumented problems and to see if you would agree that there are issues with the Yaesu. and as I also recall, I did not ask Gerald, I asked you.

But I can see that the customer is never right in your store, so I will take my business elsewhere and make sure all of my colleagues do as well. (Not that makes any difference to you,)

Oh, It's coming down a bit, is it? Yes, I'd like to to see one of those rocks that would be only slightly less sensitive than a good Sony ICF-2001 receiver. If you have the RF gain in the highest of its three positions, and get comfortable using the tunable preselector, it will hold its own with most portables, including the Sony ICF-2010. Yes, the Sony ICF-2010 (aka ICF-2001D) and Grundig Satellit 700 are better, but not really by a whole lot. The ICF-2001 sounds better than a -2010. Just don't run it on the batteries. Of course, if your ICF-2001 is really in top condition, and you have the original owner's manual and the original AC power adapter in good condition, and if you include shipping by USPS or UPS ground in the 48 contiguous United States, then you might get a taker at $100. After all, the radio was introduced in 1979 or 1980 and discontinued in 1984 with the -2010 was introduced. The -2010 is actually still being made in 1999, although not in Japan anymore.

2825. Re: Bad FT-100 Yaesu

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-07 00:00:00 UTC
From: Matthew Williamson <sales@texastowers.com>
Message-ID: <aCYq3.118$ya5.771@news.flash.net>
Source record: 101894

Actually that was Marc you were talking to. I was in my office (that over-grown cubical thing in the opposite corner) answering email.

Yes, we did have an IC-706MK2, on display until recently, but never a G model.

Yes, there are issues with the FT-100. There are also issues with every radio ever made, currently made, or ever will be made. In our opinion the FT-100 has had no more problems than "normal", perhaps less.

As far as the customer being right, you falsely accused us of lying in your last posting. I was simply offering the facts. As Robin Williams said in "Awakenings", "If you were right I would have agreed with you." ;->

I'm sincerely sorry you had a bad experience. It actually does matter to me, but there just doesn't appear to be much I can do about it. All I can do is offer to take an IC-706MK2G out and let you compare is side-by-side to the FT-100. If you'd like to come back by, I'd be happy to do so. I'll even buy you a Coke.

Just a thought:
Maybe Yaesu takes out all the good radios and makes sure we get them. ;->

2826. WTB: Johnson 275w matchbox

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-07 00:00:00 UTC
From: tm3@mindspring.com
Message-ID: <tm3-0708991153110001@pool-209-138-129-48.atln.grid.net>
Source record: 101895

looking for a johnson 275w (or kw) matchbox in excellent operational condition. will accept a few scratches and dings on the exterior.

email details. thanks.

tom wb4pne

2827. favorite cw rig?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-07 00:00:00 UTC
From: tm3@mindspring.com
Message-ID: <tm3-0708991157120001@pool-209-138-129-48.atln.grid.net>
Source record: 101896

i'm interested in a new rig, and primarily want good cw performance (full break in, selectivity, etc).

i've been reading some product reviews, but would like to consider some of the older rigs i hear about from time to time (kw ts930, tt corsair) but that i am not familiar with.

i'd appreciate hearing any comments from those with some experience with different rigs.

thanks and 73,

tom wb4pne

Hello Lee,

I think you need a CR2032, which is pretty common. You can purchase the battery at Radio Shack, but it won't have the solder tabs on it. You should be able to get the battery from Kenwood for about $10 or so, plus postage.

If you like, I have one from Yaesu that I'll send you at no charge. The solder tabs don't have holes like the Kenwood, but you should be able to use it with no problem.

Send me an email or call me at the number below.

Yes, but can't you get the front panel off without it?

If so, you can use a regular pair of pliers to remove the retaining nut once the face is off.

You might check the Ten-Tec web page, the kit building area. They have some new single band, 3-watt CW kits in the $95 range, exclusive of pwr supply...

Source record: 101901

Contact Tnic@erols.com

For Sale SGC 2020. Great condition. Used but never abused.

$500 firm - we split the shipping.

Radio is ideal for low power operation. I have used it on Kayak wilderness trips using a gell cell and solar pannels to operate. The radio is built like a brick outhouse and a pleasure to use.
This is not a feature festooned rig with every imaginable gee gaw. It is a stripped down capable rig that uses very little power has a voice compressor and about 24 watts of power. The power can be lowered to 1 watt if you desire to save energy.

I have made contacts all over the planet from the middle of nowhere with this rig.

A great little rig!

Contact Tnic@erols.com

You can find details about the rig at www.SGCworld.com

>
The relay in Kenwood equipment would appear to handle the 120V without
any problem. I have used the SB-200 with the TS830 for a few years, and
lately with the TS870 for a couple of years. I believe that the Yaesu
relay is not quite so tolerant. Not certain about Icom.

I don't think so. I built one, well it was 40 years ago (only 55 years old not, not over the hill) but I think the main difference was the case. Send me a schematic of the A and I will help you with your B model.

Hey Matt maybe you should have done this in the first
place?

Regardless of the facts, having an argument with a
customer and whats more in a public forum is poor
buisness sense. You only get 1 chance to make a first
impression but you get lots of chances to ruin a
relationship and turn a potential customer (like me)
away from your doors forever.

That is not to say that I personally won't buy from
Texas Towers or Yaesu but this whole thread has made
me wary about your customer service attitude.....

Shame.

And yes, I do own a 706mkII and am shopping to upgrade
to a 706mkIIg. The only big reason I prefer the Icom is
the remote cable connecter style (I can only afford one
"big" radio and need to switch from mobile to base with
ease).

I will keep an open mind about your company - maybe
this whole incident will change things in the future.

Time will tell.

there was a great problem for the first 1-2 years whent he Kenwood TS-570 D came out with the Lithium battery going dead. Kenwood had no idea at that time and guy tried changing the battery and it lasted not long. Then the fix was to change the battery while the unit was powered up. Finally I think the Circuit was changed that either keeps the battery charged or what. I would contact Kenwood or you will be changing batteries every 90 days. I bet the guys who sold you the radio sold it to you as he got sick of changing the battery.

A lot of these Fords have both power leads (both hot and ground) running the entire distance back to the fuel tank. Some folks have minimized or even eliminated the need for the RFI choke by simply grounding the power return at or very near the tank. If the frame of your truck is well bonded (as you should have ensured as a normal part of preparing it for radios), you might want to see if grounding the fuel pump power return as close as you can to the tank will improve the situation.

I just purchased a Yaesu FT5100 at a hamfest and, of course, it didn't come with a manual. It powers on OK but I don't have a clue as to how to set frequencies, etc. A half hour of button pushing convinced me that I need help!!

If someone could send me the basic instructions it would be greatly appreciated. I think the first thing I need to do is a "master" reset to clear out whatever is left behind from the previous owner.

There was a service bulletin for my TS-50 that said to cycle the radio on
and off after changing the battery or the battery will be drained. Check the
Kenwood FTP site, there may be similar information there for the 570...

I am trying to figure out how I got channel 60 to be a priority channel.
Any one know how to make it channel 1 or even change it?
I looked in book but cannot find out how to change it.
any help would be appreciated!

Ten Tec!

Corsair II works very well - have had one for better than three years. Full break in CW is Ten Tec's forte, and it works very well in the Corsair. I recommend a 500 Hz and 250 Hz IF filter, it makes life much easier whatever rig you decide on.

LOL
Max

Sent my TS-570S in for the (G) mod and at the same time to have the battery changed as it had gone dead. While talking to Tech Support about the mod and battery I asked about how to change the battery if it goes dead every 6-12 months. Tech Support said that there was a problem with the radio's but along with the (G) mode they were automatically doing a fix on the battery system so it would no longer be a problem. I have had no problems since the mod was done and the battery is fine. You may want to contact Kenwood and find out exactly what the fix for the dead battery problems is, otherwise you may be changing a lot of batteries.

Big clean-up this weekend, the skip is in the driveway
and everything must go.

This Collins has been sitting in the garage for many, many years.
Probably won't go, but might make an interesting restoration
project.

If I don't get any takers by Sunday night, it goes in the skip.

I have an as new Icom dual band ht with several included options. This ht is in perfect condition and is a 10 out of a 10 functionally and cosmetically. This ht has a detachable front panel which allows you to use it as a digital speaker microphone. The Z1A has an alphanumeric display, alphanumeric message and paging, backlit keypad, independent tuning knobs plus many other features. This ht has an extended receive from the factory and there are many modifications that can be done to enhance this radios capabilities. I am selling this ht with 4 battery packs, 1 AA battery case, rapid charger, cigarette lighter power cable, speaker microphone, vox headset and a comet high performance rubber duck. I am the original owner and have the boxes and manuals plus all of the standard accessories that came with the unit.
$300.00 including shipping. n8ihs@home.com

2879. Re: Bad FT-100 Yaesu

Newsgroup: rec.radio.amateur.equipment

From: Randy Biesel <rrb5@flash.net>
Message-ID: <7aOq3.681$xY.1435@news.flash.net>
Source record: 102021

Please forgive me for being wordy, this really irks me, and I fell everyone should know about it. I have been reading the saga of the 'poor little radio that could' for a week now..

Today I traveled to Texas Towers for myself, money in hand, to purchase a new Radio.
I really wanted to see the both the 706MkIIg and the Ft-100 and compare them for myself.

I had the chance to LOOK at the ft-100 but not use it. I asked to see a IC-706mkIIg to compare it with the Yaesu because they did not have one on display. I was told that had several in the box new for $1329, but not one open for me to look at. (now maybe I was expecting too much, bit I don't buy anything without taking it for a test drive first.) No offer to open one, or tell me where I could get a LOOK at one, much less try it out. (Great customer service) NOT!

I explained to them that I had heard of many users were experiencing some levels of problems with the Yaesu, I then asked about what problems, if any, had they heard about. Texas towers says " ..We had heard of NO problems and they have sold hundreds without any problems whatsoever."

It seems to me, as small a staff as Texas towers has, I am sure they speak to one another. So Why would they deny that the Yaesu ft-100 has difficulties. (because they want to sell radios maybe?)

This experience has re-affirmed my belief that customer service, honesty and integrity no longer exist. If anyone could suggest a dealer that still deals from the top of the deck, I would enjoy talking to them.

Always tell the truth... its the easiest to remember!

Randy Biesel
N5ISV

Well I had hopes that customer service and honesty were still virtues that were alive and well in the America..

I just installed EVE 1.70, and am having trouble sending data to my VX-5R.
How do i create a template of the hardware, or does that happen
automatcally? Anyhow, it'll get data, but it won't send. I've also noticed
that the "CLONE TX" stays on even after the meter says it is done uploading.
Is this suppose to be happening?

2887. Help: TS-570D Battery

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-07 00:00:00 UTC
From: Lee <lee_kabilyo@ids.net>
Message-ID: <37AC002B.999D8F92@ids.net>
Source record: 102029
Cross-posted to: rec.radio.equipment,rec.radio.amateur.equipment

I recently purchased a used Kenwood TS-570D and realized that the Lithium battery must be dead or weak (memory purges at shutdown).

My question is: how difficult is it to get a replacement battery (CVS, Photo store??) and how difficult is it to install?

Obviously there is no warranty and I would love to avoid sending it to Kenwood for something as simple as a battery. God know what they would charge for that, let alone the shipping/ins. costs!!!!

Any help would be appreciated.

Lee

Well, sorry to those W's who offered to take it off my hands -
I have found a good home for it. VK2ZIO has a museum
for radios and he is an expert restorer. He lives only 20 minutes
from my place, and he will collect it tomorrow.

For Sale NEW 7036 (6BE6) tubes.
The boxes have the following information on them:
5960-00-074-4833 ELECTRON TUBE
1 EACH DLA900-82-G-0017-005
A-3/83 GE-7036 GENERAL ELECTRIC CO. Tubes are 5 to a sleeve.
The 7036 is electrically the same as the 6BE6 but it physically
taller. It is the same height as a 6AQ5 so tubes shields will
not fit from a 6BE6.
$11.00 per sleeve plus $3.20 priorty mail shipping U.S. locations only.
1-4 sleeves $3.20 priority mail shipping
4-8 sleeves $6.20 priority mail shipping
Thanks Larry WA9VRH

2892. Re: Connecting a TS-940S to an SB-200

Newsgroup: rec.radio.amateur.equipment

Get the SK-200 mod from Harbach. If you don't I suspect you'll burn the relay in the 940 to a crisp. There is -120V on the keying circuit of an unmodified SB-200.

BE aware that the power handling of the TR switch is limited to
relatively low level - the competing SSB (brand name) unit is
substantially higher in rating...

Well nearly.
Program almost complete and WILL be released as freeware hopefully before the end of August. It will only work on a PC with win95 or above. I'm working on the save/load scan options at the moment and apart from that, it's all working. If you know of any other YAESU rigs that use the same command set as the FT920 then it will work with them as well (please let me know which ones. If the serial port rate is the only difference that's ok - I can allow for that)
You can see a screenshot at http://www.campbell84.freeserve.co.uk

All true. (It's amazing how many hams are gun people, too. Weird. Whenever I have a shooting discussion on the radio, somebody always seems to pop in and say "me too!". The anonymous sport..)

Anyway, I think the problem in all areas starts with the disposable product. It's not unusual for the first owner of a car to never have any major repairs. So there's a market for quick oil change & brake shops, and maybe never a need to see a dealer. With radios, how many new radios require you to go to the local radio store to buy tubes?

We live in a disposable income, disposable product economy. Joy.

I don't want to defend a lousy market situation, but I can
"feel the pain" of the distributor/reseller.

I run a small computer company. If somebody buys something
from me, and doesn't like it, I play the nice guy and return
it, and eat the shipping both ways. If I'm lucky, I don't
have to pay a restock fee. All for the chance of making a
15% markup on something, which is NOT much.

Now if the same customer wants to return the product four
weeks later, I'm in a bind. At that point my distributor
won't take the product back for credit, and I can't resell
it as new. And I didn't make the damn thing! Some
companies claim not to take product back at all.

And don't get me started on software! The least reliable,
lowest quality, cheapest to manufacture product you can't
return! I think they do this because it all sucks. (Ok,
I'm just ranting at this point, but how would you like to
buy a radio that the manufacturer knew had more than a
thousand things wrong with it, that they would maybe let you
buy a minor fix for as an "upgrade", for 25% of the cost of
the product, six months later.)

Anyway, I'd point the fault back at the manufacturer. (And
then they'd probably ask me how I expect them to make a high
quality 2m radio for $180 after dealer markup.)

I have listed for sale a HAMMARLUND SP 650 JX 23. Check it out at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=143471088

This is a all-band HF/6M tube type BOATANCHOR! It is a big 'ol hunk of metal. It is complete, however operating condition is unknown. Has one replacement knob (Tuning - is right vintage, but wrong knob) and one replacement toggle that needs replaced. Has ALL tubes etc intact. No extra holes in face. This is an excellent chance to add to your boatanchor collection, or start a new one!

WANTED:

I will pay $100 or more (depending on condition)
plus shipping for a BC-942 Receiver in
unmodified condition. I will also negotiate trades.
This receiver, made by Western Electric, looks just like the
common AN/ARC-5 R-28 VHF receiver but has a Signal Corps U.S. Army
nomenclature plate showing BC-942.

I will also pay or trade well for the following
"ARC-5" type command sets:

Western Electric BC-699 transmitter (looks like a T-23).
AN/ARC-5 R-112 Receiver
AN/ARC-5 R-113 Receiver
AN/ARC-5 T-89 Transmitter
AN/ARC-5 T-90 Transmitter
Any radio, rack, part, dynamotor or accessory marked
for set RAT, RAT-1 or RAV.
BC-455 with English modification for 28-41 MC.
Any AN/ARC-5 unit with "X" appended
to its nomenclature (i.e. AN/ARC-5 R-26X)
Crystal Frequency Meter O-4/ARC-5.
Any unit factory-marked in Cyrillic.

2915. Info re Melco QM100DY-2H

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-08 00:00:00 UTC
From: Phil Wheeler <w7ox@mindspring.com>
Message-ID: <37ADF887.3192ECE9@mindspring.com>
Source record: 101808

The following was posted on the QRP list (qrp-l) by someone with no newsgroup access. Does anyone have the knowledge/interest to help him out? I take it that he wants info on the Mitsubishi device and its application.

Phil W7OX

CO8JY, Josue, lives in a small town of
eastern Cuba, and he needs info on a
power device for his new power supply.
Ok.. it is for a QRO rig, so I apologize
for the bandwidth, but please try to help
this young ham if possible...
He may soon be one of our QRP enthusiasts
too !

Here is the device's data
It is a three stage"Darlington look alike"
three stage amplifier.
It has access to all three transistor's base
connections
The output terminals are really for heavy
current with a 1/4 inch - 6.25 mm bolts
and washers + nut .
It works controlling a 440 V AC 60 Hz
motor , and the control signal that drives
this device comes from an IC , so Josue
thinks that the said device has lots of
gain !

The motor uses up to 40 amps per phase
at the 440 v 60 Hz voltage.
The device is manufactured by Mitsubishi
Electric and is clearly marked as
QM100DY-2H
Each phase of the controller for the motor
uses two of these devices.

Josue wants to use it as the series regulator
for his 20 to 30 amp 13.5 vDC power supply
for the FT-757II that he just got a few
days ago .

73 and really appreciate your help
send any info directly to
arnie@radiohc.org
And I will relay it to Josue CO8KY via
oour 40 meter NVIS link !!!

Message-ID: <x7ogghvqe5.fsf@dumbcat.snafu.org>
Source record: 101812

"Gary" <Hains@smellynet.com> writes:

> I am trying to figure out how I got channel 60 to be a priority channel.
> Any one know how to make it channel 1 or even change it?
> I looked in book but cannot find out how to change it.
> any help would be appreciated!

The method was posted here a while back...

1) hit MR button to get into memory mode
2) select the channel you want to be your priority channel
3) hold the F/W key to get into write mode
4) hit the BAND key

When you're in write mode the display will show the next empty
memory -- igore the display.

Ever thought of a filter? No, not a bandpass filter; an asymetrical notch filter. Very small, very sharp cutoff of offending frequencies, no power, stays in the transmission line for xmit or rcv. Check out www.parelectronics.com. You cannot place an order over their website, but you can check out the filter(s) they have to see if they will satisfy your need(s).

They certainly did for me. Living in the DC/southern Maryland area and using a dual band radio that receives DC to light (an Icom IC-2710H), the radio was practically useless. Then a local ham sent me to Par. The '2710 is quiet as a tomb now.

Good luck,

Turner

From: Ken Diaz <kenjd@email.msn.com>
Message-ID: <ulBA58g4#GA.322@cpmsnbbsa03>
Source record: 101821

Sirs, does anyone know what the am receive selectivity figures (-6 and -60 db) are if a FL-103 ssb wide filter (2.8kc) is properly installed in an IC-781 ?? I'm not sure, but I "think" it is not 2.8 kc but rather 6 kc or greater due to the a.m. i.f. only passing through the less expensive 455kc filter (4 pole?). I can probably analyze the service manual or bother Icom if nobody has an answer here in internet land. The owners manual is not clear on this at all. Also looking for a SP-20 (reasonable). Thanks. 73, Ken. KENJD@msn.com

FOUNDATION FOR AMATEUR RADIO
c/o Al Brown
8645 TOWER DRIVE
LAUREL, MD 20723-1244

-- For immediate release --

F.A.R.FEST '99 AT NEW LOCATION

The Foundation for Amateur Radio (FAR) will sponsor the 42nd annual F.A.R.Fest amateur radio hamfest on Sunday, September 26, 1999, at Prince George's Stadium 1/4 mile south of the junction of US-50 on US-301 in Bowie, Maryland between Washington, DC and Annapolis, Maryland.

This is a new location for F.A.R.Fest, with a paved area that accommodates over 700 tailgaters. Vendors and other sellers will be able to set up under the canopy of the stadium concourse. General admission tickets into F.A.R.Fest '99 are $5.00 at the gate; $10.00 for tailgating, which requires the purchase of general admission. Vendors and other exhibitors should contact Marry Morris, N4TCI at amateur_radio@hotmail.com, or at 703-971-3905 for more information.

The Special Events station W3PRL-AM will be on display.

Talk-in frequencies are 146.520 MHz and 147.105(+) MHz.

To get to F.A.R.Fest '99:

From points North:
Take I-95 south to the Baltimore Beltway (I-695) to Exit 4 (I-97 South) toward Annapolis. On I-97 South, take Exit 7 (Route 3 South - Bowie/Odenton). Take Route 3 for approximately 11 miles. After passing under the Route 50 overpass, proceed to second traffic light and turn left into Stadium Drive. NOTE: Route 3 changes to Route 301 after you pass under Route 50.

From points South:
Take I-95 North to Exit 104 (Route 301 North). Take 301 North past Upper Marlboro. Go through the traffic light at the Route 197 intersection (Rip's Country Inn will be on the right). At the next traffic light, turn right into Stadium Drive.

From points East:
Take Route 50 West to Exit 13A (Route 301 South). At the second traffic light, turn left into Stadium Drive.

From points West:
From I-70 East, follow directions coming from points North.

From Washington, D.C. or the Capital Beltway:
From D.C., take New York Avenue to Route 50 East, or the Capital Beltway, Exit 19A (Route 50 East). Take Route 50 to Exit 11 (Route 197). Go South on Route 197 for approximately 1.5 miles to Route 301. Turn left onto Route 301 and remain in the right lane. Turn right at first traffic light into Stadium Drive.

For general information on F.A.R.Fest '99, see the webpage at URL:

http://www.amateurradio-far.org/

or contact Al Brown, KZ3AB, at ﷺamateur_radio@hotmail.com,ﷺ or at 301-490-3188.

As a follow up to my original post and to be fair to Kenwood, I found a short in my control cable between the radio and the external faceplate. This caused an internal fuse, F2 to blow. I haven't replaced the fuse yet, but I am about 95% certain that I have solved the problem. Thanks to all who replied, and thanks to Kenwood. They emailed me after I had sent a message via their home page, and the response nailed the problem right on the head.

Not only that, but Ten Tec has much better quality control and fewer defects than the other manufacturers. I have received consistently superior support from Ten Tec, on my Scout and several kits I have purchased from them. With Ten Tec, you can call them on the phone and speak to a real tech, often an RF engineer who helped in the design, right away, and they will take as much time as needed with you to explain things, or talk you through adjustments, finding faults, and fixing them.

With the kits, I have botched things several times, and they patiently told me how to fix things, and in two instances sent me replacement parts for ones I had lost and burned up, at no charge. I love Ten Tec.

And when things go fine, no worries, the gear is great. I think the Scout, in terms of gut-level RX especially, is worth twice the price (I even managed to get a tech to tell me how to fix the familiar transmit frequency jump in CW with one cap change, and now a good, clean, no-frills radio is even better. BTW, they are putting the new cap in new production Scouts, so now the one significant defect in the design is fixed).

Ironic, isn't it, that the one ham radio manufacturer that went to direct sales to cover the lack of retail support, and keep retail prices down, sells the highest value:dollar radios in the business to begin with?

DLR18SH wrote:

> If there is a local store near you check out the state law and you will see it

Are you saying that Texas Towers, or other retailers, cannot or will not replace or refund all purchases where the item is defective (*not* due to modification or other "abuse") and within 30 days of original purchase date? If true, whether due to manufacturers lack of sufficient production or other reasons, you should get out of the business.

One of the things that almost killed Apple Computer is shipping buggy computers, and simultaneously not having production capacity to make up the difference. J&R Music World, and a number of other major mail-order dealers stopped selling Apple Powerbooks for awhile because of Apple's bad management. I would encourage TT to follow suit with any ham radio manufacturers that won't ship you working units in a timely fashion.

Simply put, is is the obligation, legal and otherwise, for a retailer to honestly sell products that perform as they are claimed to. If you can't provide reliable units from your inventory from the start, maybe you should not stock that item. At a minimum, your customers need to know up front, that if the radio they buy from you turns out to be defective out of the box, you will not exchange it.

I own neither, so take what I say with a grain of salt. However, given the comments I have read over the last several months about defective units, among other problems, I would have to conclude that the Icom IC-706 series are a better bet. Since the IC-706 is already over four years old and in its third generation, more bugs have been worked out, fewer defective units reach the retailer, and the overall design has had the time to mature and improve.

Possibly in a year or two the FT-100 will have been improved and the maunfacturing defect problem eliminated substantially. Until then, I would be much more comfortable with the 706. At the moment, regardless of claimed specs and 'potential' superiority of the FT-100 RX, a working 706 beats a dead 100.

I have Knwd 940 and so does a friend a few blocks away. They are,
simply put, GREAT, Other friends have the 930 and swear by them .
I've heard that the rx on the 930 might be better but don't know that
from first hand experience. Either woud be " so good you couldn't
hardly standit it" if in good shape. It might be awful hard to get
repair parts for either, though.

2967. IC 229H 2 mtr malfunction

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-08 00:00:00 UTC
From: fjones@ionet.net
Message-ID: <7ok5gmeld1@ionews.ionet.net>
Source record: 101868

For several years the above rig worked fine in my van. One day when I turned it on, it came on in transmit mode and wouldn't un-trigger. I erased all memory, and the rig functioned okay for a while. The same thing occurred but erasing the memory didn't work that time. I left it off for a day or so and the next time I tried the it didn't come on in xmit mode and I could punch in freq , offset, and tone using VFO but not memory and it worked okay except sometime when I turned the rig on it would be on xmit for an instant. I replaced that rig with a newer rig for mobile and use the faulty one as a base rig where it works most of the time using only VFO and not trying to store in memories.

(One other thing, when received the mike output was low and a zener diode was replaced in the mike as specified by Icom, after which output was fine. Another local ham to do the same thing.)

Has anyone had a similar malfunction with this model? Was it fixable?

Message-ID: <37ada233@news1.us.ibm.net>
Source record: 101871

My 1993 Explorer (4.0/5 speed) was extremely noisy all across HF. Rather
than install the RFI filter, I properly grounded my HF antenna. This removed
virtually all the noise and I don't even have to use the noise blanker now.

Good Luck

Win WB5KOM

2971. WTB: ~250-0-250 or ~500V CT transformer

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-08 00:00:00 UTC
From: ntesla@nospam.ntesla.csd.sc.edu
Message-ID: <37ad9d7e@nntp.logicsouth.com>
Source record: 101872

WTB: 250-0-250 or 500V CT transformer

Take "nospam" out of my email address to email me directly.

The transformer I need should measure 500V across the windings and/or 250V from each end of the winding to the center-tap. If it has a 6V filament winding, that's even better. Current
should be 100mA or more on the 500 CT, and at least 1.5 amps on the filament winding if it has one.

Thanks,

Dan

Source record: 101876

Ten-Tec Omni D's can be had for about $400 with a power supply.
Pretty reasonable for a really nice cw rig. Ten-Tec repairs all their
old rigs also. Try that with the Kwd 930!! AND the 930 will set you
back $700 bucks.

I have my Kwd 440s that I bought new in '79. I love it with all the filters,
but prefer the TT for cw. Go figure.

Good luck... Mike

Howdy! I'm "Mike not Mic"!
You are in contact with Tornado Alley
My call is W5OLD and all my radios smell like smoke!
Send all traffic to w5old@sonetcom.com

I got one a few years back and even in our little town it was a intermod nightmare. I returned it to AES...Not AES fault and they were more than happy to take my return. So I order a Yaesu 5100 from them. It turned out to be a great radio. Now don't get me wrong I've had a few ICOMs and like them all. Heck I have a Icom 2000 and 229H now! Maybe I just had a bad 2700.
I think I'd like to try a 2710 and see how that one turned out.
Oh buy the way I'd never have one with remote mic due to you got to have a charger cradle on all the time

Hi Randy. I havehad no problems dealing with AES or HRO. AES
replaced a bad battery pack tgha came with my Kenwood TH-G71a last
fall. No questions asked, and no hassle. I just sent it in (no RMA
numbers or anything!) and they sent me a new one. I believe that
some people order a new rig just to "try it out" and if they don't
like it, the try to return it as defective. This ruins things for all
of us as, if dealers have much of this type of thing happen, the end
up losing money on the equipment. This translates to higher prices,
restocking fees, and overly restrictive return policies.

I am posting this on behalf of a local amateur who has been responsible
for disposing of this equipment.

Circuit 2m convertor made from kit with helical filter ,28-30 MHz out
with 116mhz transvertor output. ï¿½10.

Maplin Frequency Meter adapter kit (LK20W),turns a digital multimeter
into a frequency counter. ï¿½10.

Digital timer to fit uk mains socket ï¿½5.

E:mail or phone George 01376 326577 UK only.

You'll need a crimp tool that will handle 8 conductor RJ-45 plugs. These are the same ones used on Ethernet patch cords and ISDN modems. The Radio Shack crimp tool will only do 4 conductor RJ-11 plugs (unless they've changed it recently).

We've had MUCH better luck with the modular plugs than we ever did with the round ones, though you'd never believe it by looking at one.

Good luck,

-Matthew Williamson, N5VQT

I found the plugs some years ago from Kenwood, though they didn't supply the darned pins. To top it off, you apparently need metric sized pins which are unavailable here in the states.

Parts Numbers:
Icom (425) 454-8155, ask for amateur parts
Kenwood (800) 262-1312
Yaesu (562) 404-2700, ask for amateur parts

Source record: 101696

You might want to try switching it from transmit to receive and back a bunch of times. Sometimes gunk builds up on the T/R relay and you get no receive until the relay is clean. If this is the problem, operating the relay 30-50 times might burn off the oxidation.

Good Luck,

Perhaps you fellas have some knowledge on a Millen Rx preamp - plug in coils. Dad (W9EHS) passed away and left one. He had it since, at least, the early 50's. Appeared he was still using it, possibly on an NC300. He wound a 21 MC coil. Is has coils for higher freq's - I think 14 to 50Mc. I think 4 controls - Don't have it in front of me, but can get more the next time I go to visit Mom.

Comments ?

The FT-2400 and FT-2500 are both excellent at combating intermod! With these rigs you still get expanded RX. With a bandpadd filter, you'll be restricted to 144-148 MHz RX only.

Bring the audio from the receiver into a phono socket, plug a phono splitter into this, then take two feeds from this into the filters. Just switch off the filter not in use.
If you want to be really upmarket, use a wafer switch fitted into a little box.
David.

Do you already know : Analyzer2000 has now also a logarithmic frequency axis!

Analyzer2000, one of the world's most fastest and famous audio analyzers,
is now available in the 3.20 version.

It's full functional shareware and can be download at
http://members.aol.com/btf1

+++Superfast spectral analysis with FFT display for time and frequency variant
signals
+++FFT sizes from 256 to 16384 points, dynamic range up to 160 dB, graphical
zoom up to 32:1
+++linear or logarithmic frequency axis
+++Time analysis with oscilloscope and envelope display
+++Sonagraphic analysis with waterfall display
+++Measurement tools like markers, frequency rulers, level rulers, time rulers
+++Easy determination of THD, SNR (SINAD) and VCO phase noise (dBc/Hz)
+++Built-in test generator for sinewave and/or noise stimulation (full duplex
mode)
+++Multi morse decoder
+++PSK31 modem driver for the new RTTY mode
+++Simultaneous recording directly from PC sound card to standard wave file
+++Snapshot functionality (20 seconds post trigger memory)
+++Analyzing of standard wave files or post trigger memory in offline mode

Hey Don,

You are incredibly misiformed on the DX70. It is a great little radio esp. if you consider size/price. Good mobile, I have not treated mine especially gently, and it works GREAT. Now if you are comparing it to a $3,000 plus FT-1000, well.... you know, apples, oranges, you fill in the blanks.

Make sure the switch on the side is in XCVR and not RCVR. Also clean the contacts on the relay with a burnishing tool, and check for an open antenna fuse (a plug-in #47 lamp).

Gary

Matt and the group.
Icom parts numbers:
Plug 93606287
Pin 93602726 (obviously you need 6)

Less than $3 a set.

Hi,

I just bought this unit June 22nd, and received it July 14th and have
used the MVT9000 very little since the time of purchase, < 1 hour on it.
I have
just recently acquired an IC-R7000 base model and I never really had a
need
for a handheld, but it was great while it lasted. Including accessories:

OP-90 Case
MVT-7100 Antenna (It sure beats out the stock 9k antenna)
Radio Shack 20-006A
Universal Power Adapter
Box, manual, packaging (yes i kept it :)), original receipt, batteries,
belt clip, handstrap, 9k stock antenna, etc...

Please e-mail me a reasonable best offer, everything is mint, less than
an hour of use and no "shock" thanks from help from Rich on the polarity

part :).

Regards,

Aaron

Message-ID: <l5Or3.725$n7.99352@typhoon-sf.snfc21.pbi.net>
Source record: 101723

Hello,

I've got an Icom IC-02AT in EXCELLENT condition with the following
accessories:
2 - BP4 battery packs (also in EXCELLENT condition)
1 - DC1 pack (in very good condition)
1 - HS10 boom mike (needs new pad for ear piece) that has been modified
to hold a BNC antenna
1 - HS10-SB PTT switch box for the HS10 (in EXCELLENT condition)
1 - HM65 (?) Speaker / mic (in VERY GOOD condition)
1 - BC-25U Wall charger
***** Looking at the price lists on the web, that's over $300 worth of
accessories alone!

I don't have the manual for the unit, but it all works great!

I'm asking $275 O.B.O. (you ship) for the whole package.

I DO NOT want to sell this in pieces, it's all or nothing.....

73's
Brian

I have an HTX-404 for sale for $80 shipped to anywhere in the lower 48 US. It is a 7 out of 10, only due to minor scratches here and there, none on display. If not for the scratches it would be a 10 out of 10. Has original box, Manual, Alkaline pack, NiCD (recently rebuilt) wall charger and antenna. Original antenna was lost long ago, but has replacement Larsen 70cm antenna. This is a GREAT HT very tough and durable, Loud audio, and GREAT condition electrically/operating wise. One of the last models with Realistic instead of Radio Shack on the front. Some people feel these are better quality, but I don't know I have only owned these with Realistic? If you are interested please E-Mail me at one of the addresses bellow and let me know if you are interested, either in E-Mail or here. Thanks....

Source record: 101741

Well you know Matt,

You folks had the opportunity to let me compare the two rigs side by side the last time I was in the store. Shouldn't anyone that enters your store be afforded
this same courtesy ? No one was willing to take the time to show me the 706MK2G. or let me try it and the ft-100 out side by side. It felt like I was a bother and the $5000 I had to spend was of little
concern to Texas Towers. I can purchase ham equipment anywhere, any establishment I buy from must
earn my respect with quality equipment and excellent customer service

Also, the correct answer does not include pointing fingers at your customers saying " you falsely accused us of lying" arguing, or treating us like a 4 year old.

I was very eager to buy an entire new mobile station from you because you were closer than San Antonio, We pay your salaries, keep the lights on and the doors open.
You never get a second chance to make a first impression. Most consumers only care about being treated fairly, with respect and dignity; AS well as having their inquiries answered in a timely and honest manner..

Consumers shop at stores like Nordstrom's and Neiman's because they treat us with respect and courtesy. They don't argue and go out of their way to assist us. They know the dollar in our pockets is theirs to earn. That is why they are successful.. Take a lesson from them and you will be very successful. Don't and you will perish like so many others before you

Thank you for the numbers I am sure it interests someone, as for me, I will have purchased a new station by Wednesday from someone that respects my wallet and me.

Randy

Clint anyone with a sixth grade reading comprehension has know
the conclusions I draw from the facts I present are mine. I know
you're not the sharpest pencil in the box but I thought even you
might get this. I guess I over estimated you.

You do something questionable say like trying to obtain propriatary
information about coding Yaesu radios then later try to buy 100
Yaesu programming cables. Even one as dense as you should see this
as a bit suspect. But then I'm dealing with Clint aren't I.

>
> RT Systems has absolutely no problems with my posts. And, of course,
you

Why do you keep bringing up RT Systems and why do you keep bothering
them. They're not going to tell some ranting idiot they object so they
can get even more stupid whining calls from said fool.
>
> It is you - and only you - that equates my online presence with any
> deviousness or underhandedness.

I just present the facts and a thesis everyone else can make up
his own mind as to your deviousness etc.

>Don't you read you own email? Folks are
> tired of your psychopathic "anti-ANYTHING-Clint-writes" rants.

What email would this be Clinton? The only email I have received
reletive to our little spad are a few affirming my position that
you are a jerk and some complaints about faulty ADMS software.
The only negitive email I have ever received about my Clint comments

were from you and there I must consider the source. In fact the only email I received since this latest argument started was one of Welcome to the .misc newsgroup.

>
> I have nothing to change about how I initiate and/or participate in
> threads here, Gerry. Go find some other target for your rants.
>
I'm sorry you cannot see how nasty you come across but then I did not expect that you had an open enough mind to even reread some of your posts.

As to finding another target sorry I don't take orders from self-important yahoos. As long as you continue to belittle people for the high crime of not finding the world just like you do you will have to continue to be my poster child. It really is a waste of my time but I do it gladly as a public service. Letting the hot air out of blow hards is the Lords work.

Have a lovely week and try to be a nicer person. Say hi to the JFK guys for me.

The relay is rated at about 25 watts. However, the ARR is EXTREMELY
susceptible to damage from RF. I have had a couple and they both
suffered the same malady. They were destroyed by nearby signals from
transmitters. The two meter one by the 440 transmitter and the 440 one
by the 2 meter tx. Not the best choice for satellite work...

I now use Landwehr mast mounts. There was a gent on a few days ago who
had the pair (2m and 70cm) for $150. Certainly priced to sell....

3042. Re: Kenwood Nuts Revisited

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-09 00:00:00 UTC
From: DontDoIt@ImNotHere.com
Message-ID: <37aeaee5.1147761@news.mv.com>

Cross-posted to: rec.radio.swap,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

That's great Matthew, and people should definitely try the simple approaches first. One's that I've tried are:

1. Using a single pointed instrument, like a small screwdriver, see if you can gently tap the nut loose (by pushing in a counter-clockwise direction on the nut). By occasionally switching to different slots, you can possibly just work it out slowly.

2. If this is not successful, do as Matthew has suggested, simply take some flat stock (or a fork) and make a custom-shaped two-toothed thing that you can turn with your hand. This can most easily be done with a file or grinding wheel and some flat steel stock, approx .030 to .050 inches thick. In my case all this yielded was a bent tool, since Kenwood had really torqued the nut on.

3. If this is not strong enough, you can move to the next level, a needle nose plier. The best method I've found is to use a very small c-clamp on the sides of the pliers to help strengthen the plier's hinge point. First spread the pliers to fit two of the slots, and to clear the microphone connector housing, and tighten the clamp really tight. If you're very careful, you can apply quite a bit of torque this way, but if you slip (as I did) you'll probably gouge the front panel of your radio.

4. If, incredibly, this still is not strong enough, or you don't want to risk hurting the front panel, then you need to bring in a tool such as the one I've found.

Well, I can only speak for myself, but what I'm getting from this is that I have to be carefull not to only listen to half of the story. It's always going to be slanted. (Like the news!)

I'm reading along mostly because I'm wondering about other problems that yaesu may have, like with the 2600. I haven't heard any decent statistics yet on that one, only 1 story plus a friends that keeps 'blinking out' on him.

Date: 1999-08-09 00:00:00 UTC
From: Mont O'Leary - K0YCN <moleary@rbci.com>
Message-ID: <yuAr3.40$xx3.222@news.flash.net>
Source record: 101759

I just purchased a Yaesu FT5100 at a hamfest and, of course, it didn't come with a manual. It powers on OK but I don't have a clue as to how to set frequencies, etc. A half hour of button pushing convinced me that I need help!!

If someone could send me the basic instructions it would be greatly appreciated. I think the first thing I need to do is a "master" reset to clear out whatever is left behind from the previous owner.

3049. Drake TR-4 question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-09 00:00:00 UTC
From: tfort@mindspring.com
Message-ID: <37af9dd4.134236380@news.mindspring.com>
Source record: 101760

I picked up a Drake Tr-4 yesterday that was supposed to work good. I was told that it hasn't been used to transmit in 3 years but has been used to receive recently and received well. I brought it home and hooked it up to my SW antenna and couldn't get hardly anything. My antenna is just a 75 foot wire run along the top of a privacy fence. The same antenna on my old hammarlund works pretty well. Does the drake need a better antenna or should it receive as well as the hammarlund? I am wondering if the radio has problems. I am a fairly new ham and have only been on 2 meters. I would really like to get into HF. This is the only way I could afford a radio.

Thanks.
Tracy

3050. SCAM ALERT Follow-up

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-09 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <37AEDD75.CFCACE7F@ix.netcom.com>
Source record: 101761
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

Here's a follow-up to the scam alert I relayed a couple of
days ago. This contains contact numbers should you be one
of this guy's victims.

I don't have any further information at this time.
73 Dave

SCAM ALERTS;
As a result of last Saturday's emergency "Scam Alert", several
responses were received ....
The subject of that message was a Mike Kirby, operating
out of a P.O. Box in Panama City Florida. Kirby was prosecuted
for this very same activity in 1991 and an in-depth article
was published in "Antique Radio Classified"...
(see Feb. 1991, pg 21, ARC).
He operates by selecting want adds from various radio related
publications, then offering much sought after equipment at a reasonable
price. He accepts 1/2 payment up front, with the further incentive of
free delivery by his brother-in-law who is a supposed independent truck
driver. Needless to say, neither the equipment,
nor the brother-in-law exist.

So far, he has targeted persons advertising in QST,
Antique Radio Classified, Electric Radio, and Amateur Radio Trader.
Currently Kirby is again being investigated by both the U.S. Postal
Service, and the Bay County Fl. Police. The evidence so far against him
is mounting, but more is sought. If you too have suffered at his hands,
or can offer additional information, contact Detective Robert Luther of
the Bay County FL Intelligence Division at the following phone numbers:
850-872-3129 ext 3129, or fax 850-747-5914. As Kirby is also guilty of
mail fraud, and interstate & international wire fraud, it would also be
a good idea to file a complaint with your local Post Master and FBI
office(indicate to both that other investigations are currently in
progress and give them Detective Luther's number),
and the publishers of the magazines that promped
Kirby to contact you.

As investigations are currently underway,
it would NOT be a good idea at this time to confront Kirby yourself!

Here are some responses to the scam alert posting.
I am simply relaying information received as requested.
I do not have any personal knowledge as to

the accuracy of any of these allegations and
cannot myself make them.
I suggest and request that you use
your own judgement in each case.
D.S.

Also as a result of the Saturday "Scam Alert" Message, several
other complaints were received about persons operating similar scams, or
questionable activities. All of them have been reported before, so I
feel
they warranted including here.

#1, say, there's another guy who advertizes a "List of WW2 radio
equipment"
and has offered this list for 2 years now. I just saw it still
advertised
in Ham Radio Classifieds. This is not on the same level, i wouldn't
really
call it a scam except your money for this list is wasted, the list has
some home radios and junk and not anything you would want! I don't
understand the payoff for this guy and why he continues to list the same
junk month after month.

#2, There is a person named Bob Van Dyke,in East Quoge,NewYork,out on
Long Island.He deals mosly with entertainment type antiques, and
although
his
tactics are perhaps barely legal,he is one of the most hated people in
these parts when it comes to antique radio.He does
deal in surplus when it
comes around, so some of us could be victims.I told him that he is never
allowed to come on my property or communicate with me in any way.His
tactics are mostly lieing about the completeness or condition of
equipment,and drawing you into a deal of "bait and switch".

#3, The below company has been reported here before with their
outlandish
claims, ridiculous prices, and non-existent equipment for sale, I'm
informed that there is now a Federal Task Force who's sole purpose is to
investigate internet fraud. Perhaps it's time to blow the whistle on
these people too!!! Anybody know how?

I WONDER IF HE IS RELATED TO LESTER KALTENECKER,
THE GUY SCAMMING PEOPLE WITH PRC-77.

Another "bad guy" is Les Kaltenecker. He runs "American Military":
http://www.ammil.com/ (of Orlando, Florida).
The site which offers: "PRC-6, better than new!"
He seems to have a great stock; so I ordered some rare exotic military
stuff.
If You order he immediately charges Your credit card and nothing
happens!

I lost about 670 USD 2 years ago.
I don't know how to react from Europe!
Your "desperate -----"
BE AWARE!

Hello. I'm trying to figure out the best way to use two separate audio filters with one Drake R8B receiver. Basically, I've gotten use of a Powerclear DSP unit and a Datong FL3 analog filter, and I find that they are both useful for different things. The only problem is that connecting and disconnecting them when switching between them is a pain. Is there any way of splitting the audio out from the receiver so that I can switch between the two filters using like an A/B switch?

I've thought of using a basic speaker selector switch found at audio stores, but these use wire connectors rather than plugs, and I'm also concerned about impedence matching problems. I've also looked at audio source switches from Radio Shack, but these are for line-level audio, and I'm afraid they're not up to the task of switching external speaker audio power.

Anyone have any ideas?

Thanks.
Bruce

>That is what I'm trying to solve, and despite some others sarcastic
>comments, the manual is not clear on the pinout connections. I was just
>hoping someone here had a similar setup.
>Thanks for your sincere suggestions....

Just ignore the critics and sarcastics. They're the ones driving down our great hobby. It's up to the rest of us to be the good guys that keep amateur radio afloat in modern times. With some of the attitudes on the bands I'm sort of surprised there's still so much interest in hamming!

I'm updating an Ameritron AL-84 amp with more modern tubes, and which also uses an external relay switch, for mating to my TS-930. We're in the same boat. Thanks for asking the question for me, I'm really into the replies!

73, Mike KC2EAL

P.S. Maybe we should make people pass exams on computer architecture, use and programming before they could post to the Internet. That would even the playing field and stop a lot of the criticisms. For example, "What offset amount in assembler causes a jump in the program bug of exactly 14 bytes for an IBM PC-architectured motherboard?" (roughly equivalent question to effective bandwidth of CW) Or, "What's the minimum practical free memory size for the program launch subroutine used by the Microsoft C++ version 6 compiler?" Oh, the havoc we could wreak... I would settle for required netiquette lessons!

One drawback to the cheap methods I've tried is that, especially with the mobile rigs, it's very easy to have the pliers or screwdriver slip and scratch the front panel.

Try the fork deal at your own risk, but remember, it's always easier to get forgiveness than it is to get permission.

I've done it both ways. The tool is awfully nice.

It attaches to the Mic/Earphone jack on the radio. From what I understand,
it will NOT work with a Motorola radio.

We had someone do a demo last night on our net. Pretty nifty - especially
for a quick temporary repeater setup.

Look at the Radio Shack collection of cable connecters, and get a
Y-splitter that fits your plugs -- there's male & female splitters,
and you should be able to rig something. May take several splitters
&/or connectors.

It seems you could get a Y-splitter coming out of your receiver's
speaker output to each filter input, then a Y-splitter connecting each
filter output to your speaker plug.

I'd draw you a picture, but this newsreader doesn't draw...

Howdy! I'm "Mike not Mic"!
You are in contact with Tornado Alley

I want a AZ-21A; my offer is one of theses two mobiles....

1. Alinco 110 the one with the multi-color display (easy on the eyes)
45watt high, braket and manual...unique radio.

OR

2. Icom 229H High power version. With manual and braket.

If your knowldege of these radios is slim I'd be more than happy to answer
any questions.
But, if it were me I'd take the Icom I got, it's the better radio. But I
like the 110 better because It's a breath of fresh air in VHF radios. It's
so colorfull!!!

I'm always open to offers....heck you know it never hurts to ask...well I'd
never ask a giant why he was so ugly. OUCH!!

My call is W5OLD and all my radios smell like smoke!
Send all traffic to w5old@sonetcom.com

You get what you pay for. They don't call it Stinco Alinco for nothing.
They are VERY poorly made radios that fall apart easily.

Can these radios cover the ham bands? I am taking my tech exam in a few days and would really love to keep these radios to use.

Jarrod Taylor
Please reply by email.

3081. FT-757GX No Tune

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-10 00:00:00 UTC
From: CJ <cjr@visi.com>
Message-ID: <37B09259.11D27714@visi.com>
Source record: 101586

Working on an FT-757GX which I understand was dropped. The display is "stuck" at the lowest frequency on all bands. There is no reponse to the tuning knob. All the other front panel controls seem to act normally.

The lowest frequency on the 30m band is 10Mhz. It receives WWV just fine there, but it won't transmit (into a dummy load) on that frequency.

There is no obvious damage either inside or out.

1. Any ideas about how to proceed? I have both the owner's manual and the technical supplement.

2. I know its a long shot, but is there a procedure for resetting the CPU on this rig? Seems like it couldn't hurt.

Thanks es 73, CJ K0CJ

3082. WTT: Nice Tek2445 for nice HF rig

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-10 00:00:00 UTC
From: Richard <rhager@TAKEOUTahha.com>
Message-ID: <37B095BA.56D7A33A@TAKEOUTahha.com>
Source record: 101587
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Hi all,

New ham here, looking for my first decent HF rig, in
anticipation of passing my 5wpm next week.

I have a fancy Tek 2445 150mhz 4-channel scope, which
I'd like to sell
or trade for a nice HF rig, like TS950 etc..

A little web-surfing shows this scope selling for
$1,600 to $2,800, depending on the place (and how good
their salespeople are I guess!). Would like HF rig in
the same range of value, especially model which
receives two sigs at once, has DSP, especially if IF,
etc. etc..

Scope is pristine physically, and appears OK
electrically, although I have no way of telling if it's
in cal or not. It puts signals on the screen, gives
you delta-time and voltage readouts right on
the screen, etc. etc.... A VERY nice analog scope.

I have the big original blue Tek manual with it too.

Please remove 'TAKEOUT' and reply to
rhager@TAKEOUTahha.com

Also have some other test equip and CNC-control equip
I'd be willing
to trade for a couple HF rigs, 2M rigs, and HT's for my
brother and I.

Thanks much!

Richard, KC0FVV

3088. TS-570D: Computer control glitches keying

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-10 00:00:00 UTC
From: Robert Brandon <rbrandon@nospam.austin.ibm.com>
Message-ID: <37B0A9AD.F2D6E108@nospam.austin.ibm.com>
Source record: 101593

I just picked up a TS-570D and have connected the computer interface to use it with DX4WIN.

Everything works, except when the software polls the rig for frequency, mode, etc. (once per second by default in DX4WIN), CW keying hiccups. It either drops a dit or stretches a dit into a dah.

Has anyone else run into this? Any workarounds?

Please remove the "nospam" in the address, and reply via e-mail. Thanks very much.

Go to QRZ.COM and check the DJ-191 mod out. The only difference between the 190 and 191 would be the DTMF keypad on the unit. Just like the DJ-191, just cut and secure the blue wire.

The DX-70T and DX-70TH are great radios.
Not sure where your coming from, but I have found these to be the best
of all of the 100 watt compact mobiles. I have tried the ICOM 706, and the Kenwood
TS-50, have not tried the New Yaesu FT-100 yet, but for the $ value, the Alinco is great!

The DJ-120 is an older 1980's vintage handheld & my best guess is that you will nedd a regulated supply that could deliver at least 2.5 to 3 amps cont. output to be safe. most 5W HT's draw around 2 amps or so at high power xmit. Good Luck!

You didn't mention the range required, but Parallax Inc. has available
RF modules (operate on 303.825 MHz) for short-range communication. They
are RS-232, not sure at what maximum data rate. They are intended for
use with PIC microcontrollers and Basic Stamps, I think they even come
with example source code. They are around $70 each.

Oh. OK, a little out of the range of the Parallax modules, by an order of magnitude or two. Another suggestion would be to obtain an inexpensive HT and re-package the electronics with a PIC microcontroller or Basic Stamp (there is code available on the web to turn them into a programmable modem or even format ax.25 packets for UNPROTO reception by a standard TNC). Depending on what you need your on-board microcontroller to do, you may well be able to combine all the required functionality into a single PIC controller, they are extremely versatile. A used Icom 2A handheld would be great for the RF deck, the electronics package is small and easy to remove, they are very easy to interface, and they only draw about 20 ma. on receive. You should be able to find a clean one for around $75. There is undoubtedly pre-packaged hardware out there to do this as well, but the cost will be much higher than home brew, and probably much less versatile. Depends on your budget and requirements.

Sounds like a fun project, hope this helps.

- Seth

Thank you Mr. Price-Police. Please check your facts
prior to
needlessly making life more difficult for others. A
scan of 4
recently completed auctions on ebay shows the average
to be $680,
not $500 as you stated; about a 40% error.

None of those included a manual, about $60-90 at the
manual-dealers,
bringing the average 'comparable' to about $750+. None
were pristine;
all were 'as-is', adding another factor to the price
equation.

Regardless of all that, as the original post stated, a
scan of
reputable used-equipment dealers does indeed show a
range of
$1,500 to $2,800 for this scope.

The point of the whole thing is simply to find someone
with an
extra HF rig who wanted a nice scope, and get
negotiations started.
Not to determine a planetary-wide value for Tek scopes.

sigh....

I understand the Tekk data radios already have a digital port, so you shouldn't have to build your own FSK circuit. I'm not sure whether it's RS232 or TTL-compatible though.

Hi,
I prefer to use Motorola radios as scanners. I really like how the VHF MT2000 performs (great sensitivity), but was wondering how the HT1250 compares. I have been told that the new HT1250 radios will replace the MT2000, PLUS....a new HT1250 is cheaper than a used MT2000.
Anyone have any opinions?

Source record: 101642
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

I'm looking to set up a telemetry system between a small
microcontroller and a PC. This is strickly a one-way connection so
using a packet system really isn't necessary. I simply want to take the
RS232 data from the microcontroller, send it over the air to a receiver
connected to the serial port of the computer. The ideal system would
handle 9600 baud, and be small and light weight. I have been looking at
the Tekk Data Radios but assume that I would have to build a FSK circuit
between the micro controller and the radio.
I'm sure that this has been done before and I don't really want to
reinvent it. If you have any ideas on radios that can do this for me,
or have schmatics of systems that you would be willing to share, please
let me know.

Thanks

I have for sale a Tempo ONE HF rig with the AC-ONE power supply and speaker on e-Bay at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=143478898

Unit seems to work fine, although I have not tried to transmit. No mic. Face looks 8+ with one small scratch. This is a later unit with the black face. These are Hybrid solid state/tube radios, built by Yeasu as the FT200 and brand labeled for Henry Radio as the Tempo.

This would be a great entry level HF rig.

3128. 220V to 110V conversion

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-10 00:00:00 UTC
From: Jim Allen <jim_allen@hp.com>
Message-ID: <37B03352.C57@hp.com>
Source record: 101652

I'll be traveling with a 100W solid state rig. It needs 12V at 20 A. I have a nice Astron 20A switching power supply. My problem is that the main part of my trip is to a place that has 220V.

I was thinking of using one of those travel converters, but that might not be a good thing. The directions say that you can use them with hair dryers, etc., but not electronic irons, ect. I'm thinking that maybe they don't supply a good constant voltage.

I have one that is rated at 1600 watts. Is this going to work? Anyone have a better (and hopefully light weight) idea?

Thanks,

Jim

Many power supplies have a switch for 220V. In some cases, a soldering is needed. I used to have a Yaesu switching PS that had a switch. Some other PS need soldering to switch to 220V.

I don't think that a travel converter will do any good except ruining your PS and possibly your rig.

I have over 300 pieces of vintage radios for sale. I am in Redding,Ca. and would love NOT to have to ship alot of it.If you live within driving distance,you might want to come and see it all. I have about 60+ pieces of Hallicrafters (no 115's or 88's),50+ Hammurland,50+,National,20+ Johnson encluding a desk KW,80+ on misc.rigs,tubes,some parts,Collins R388,40+ speakers,etc. Please DO NOT EMAIL ME FOR A COMPLETE LIST. You can call me at (530)241-0843 if interested and I can go through it with you.All emails for "do you have this do you have that" will NOT be answered. I only type about 10 wpm and it would take me too long to put out the list to every one who ask. Prices are good and I will cut a better deal for those who buy multi items.

You may want to look at the Astron switching power supplies. They are much lighter, and have switchable input from 120 to 220 vAC. They are also very lightweight, about 5 pounds.

Message-ID: <01bee34e$4f6f48c0$ce0231d1@default>
Source record: 101661

Howdy! I'm "Mike not Mic"!
You are in contact with Tornado Alley

I want a AZ-21A; my offer is one of theses two mobiles....

1. Alinco 110 the one with the multi-color display (easy on the eyes)
45watt high, braket and manual...unique radio.

OR

2. Icom 229H High power version. With manual and braket.

If your knowldege of these radios is slim I'd be more than happy to answer
any questions.
But, if it were me I'd take the Icom I got, it's the better radio. But I
like the 110 better because It's a breath of fresh air in VHF radios. It's
so colorfull!!!

I'm always open to offers....heck you know it never hurts to ask...well I'd
never ask a giant why he was so ugly. OUCH!!

My call is W5OLD and all my radios smell like smoke!
Send all traffic to w5old@sonetcom.com

Source record: 101681

Hi Guys!

I came acrioss this old, dusty beasty lately. It's dusty/dirty and
been sitting in garage for ALOT of years, so I am not sure it works.

If anyone might be interested with an offer in AS IS condition, please
email me.

The line cord will need replaced. Tubes LOOK good but I am too chicken
(so far) to replace the line cord and power it up without checking the
electrolytics and tubes first.

This is an oldie and the guy I got it from said he used regualrly
before putting it in the garage. if only he covered it up or boxed it.

He also could not find the key - This is a CW and receiver only I
believe he said.

This is a real fixer upper if you are into that sort of stuff. I am
just trying to rub pennies and get a decent, used, inexpensive HF rig.

Thanks - 73 - Ed - KF6YKM

3158. FS/FT: 6 Meter MIDLAND Commerical Radio - 80 watts

Newsgroup: rec.radio.amateur.equipment

Message-ID: <37b28920.2623018@news.gte.net>
Source record: 101682

Hi Guys!

Another goodie - a friend gave me this to sell to get a HF rig - He told me it was a 6 meter, programmable, 80 watt rig and he paid $250 for it.

I have no idea what it is truly worth so will consdier all offers.

It is a heavy grade critter with a long cable on it and a control head and externbal sopeakr. I think this is so the unit can go in the trunk and then the control ehad, speaker and mike can fit in the front dash area of the vehicle.

What it would be used for, I have no idea. He said that it has 50 memories programmed into it.

The model number is 70-056C.

The unit itself has a heavy duty 'handle' on it.

Please feel free to send email with any other questions. In the menqtime I'll try to fire it up and se eif I can figure an antenna to test it it on (I have only a 2m/70cm HT and a CB, but and external CB antenna).

Thanks - 73 - Ed - KF6YKM

3160. Need help with QRM!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-10 00:00:00 UTC
From: Lorna & Tim Mize <tmize57@juno.com>
Message-ID: <37B0A58F.DAE8E054@juno.com>
Source record: 101684

Hi, I am having some problems with interference from a pipe organ into our PA system at our church. When you have a mic channel up you get a click or pop in the PA as you release a note on the organ. I have done some filtering on line inputs and outputs and that helped some. The mixer, an Electro-Voice, has filtering on the XLR inputs, but is not transformer balanced. I tried building a test filter on one of the inputs (as suggested by Shure Microphones) using 3mh chokes with 6-50pf varible caps across them and .01's to ground on the mixer side, also 100uh in the ground line. This didnt help either, I then purchased a Sescom matching transformer that will pass phantom power, (with problem happens only using electric-condenser mics by the way), as suggested by Shure, this didnt help either. It is being caused by the solinoids as they collapase, just on some notes. I can filter this right at the solinoid, but this would require many caps, probably around 150, and if you saw how hard it is to get the solinoids you would understand why we have to go the filtering in the PA route. If any of you hams have had to filter out CW or a similar QRM and can offer some advice I would appreciate it. We could use non-condersor mics, but we really need the electrics as they pick up so well. Thanks for reading this and for your

time!

3162. Pulling hair out over Clipperton-L

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-10 00:00:00 UTC
From: Tim <tvendt@kear.tds.net>
Message-ID: <3vKr3.62$R_6.30930@ratbert.tds.net>
Source record: 101726
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Greetings.... I am wondering if there is anyone out there that is familiar (intimately??) with a Clipperton-L and problems with parasitics etc etc etc... I have tried to read some of the threads on the users groups that have to do with this problem and ones like it but they keep going off on so many tangents that it's hard to keep track of what is trying to be said. Everyone has their own opinions as to what causes parasitics and how to remedy them... My problem is that back several years ago my bandswitch zorched due to what I think was a parasitic. I rebuilt it, installed it after replacing all four suppressors on the tubes (two were cracked...another indicator). During the time it took me to remove the switch and then repair/replace it (two years) I lost the notes I had taken that showed where all the connecting wires went to on the switch from the various tap points on the tank coils . I was able to figure out where they went using the schematics (actually about 95% sure). Now I only get output on 160 mtrs. One thing that I think is telling me that I am still dealing with parasitics is that as I sweep the tuning and loading controls through their range without drive, I see the plate current meter peak. Also I'm not sure if I'm also dealing with bad output tubes. If I seem to be getting good power out on 160, wouldn't that tell me that my tubes are good??? or do they lose something even going up to the next band (75mtrs), Should I just junk this amp and spend my time and money on another amp. I guess I just feel like I'm spinning my wheels at this point. Can this amp be made to work reliably and well without spending hundreds of dollars. Heck for that kind of money I'm almost halfway to a used AL 80 or L4-b. At least they seem to have a decent track record... Or, I have 99% of the parts to build a 4-1000 rig... A project I've put off for years but maybe with winter coming, it's not starting to look that bad..... and I can heat my house with it!!!!
Any Help would be appreciated.....
73 Tim KB1MM

One thing to check- make sure the noise is not being coupled through the the mic element's power supply. Put isolation filters on both the mixer and organ power lines. Ensure your shields are continuous and everything is grounded(to a single point if practical). Good luck

Don,

I'll echo all that's been said about the Alinco DX-70TH, it's a great radio with a hotter receiver than my IC-706 or IC-756. I've used it mobile and portable and have knocked it around plenty and it still works like the day I bought it...a solid performer.. Grab one at that price before they are sold out!!!

Hi all. I recently did a job where we used about 500 LTS2000 Motorola portable trunking radios. Now I'm interested in purchasing some, but before I commit to them I'd like to check some stuff out first. I'm looking primarily for the RSS software so I can see what I can program these radios to do, but I'm also looking for any manuals ie. the radio manual and the RSS manual. Should I decide to buy these radios, I'm planning to buy most of this stuff new, but I don't want to spend all the money and then find out i don't need it. Also I'm having some trouble with my news programs, so if you could cc a copy of your reply to my email address, it would be muchly appreciated! Any info at all will be appreciated!

Thanks in advance for your help!

Hey Josh,

We have 35 of those radios in 900Mhz and they're absolutely lousy. Poor
r'cvr and transmitter preformance, only run about 6 hours on a charge.
If I could throw them away, I would. We've had a lot better luck with the
MTX9000 radios.
But you know what they say about opinions...

Dan

3183. FS -Westinghouse Receiving Tuner and Detector Amp

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-11 00:00:00 UTC
From: Bob <hcouture@ime.net>
Message-ID: <7otdvs$3a5$1@news.harvard.net>
Source record: 101447

Hi, I was given a Westinghouse Receiving Tuner Type RA and Detector Amplifier Type DA. There are patented dates of 6-30-08 and 10-6-14 on the receiver side with a build date of 5-29-22.(I think). The detector tag says style 307190; patented 4-17-06 10-6-14 7-3-17 5-10-21 with build date of 5-29-22 (I think). The unit is mounted in a wood case with a flip up section on the top of the unit on the right side. The flip up section allows access to 3 tubes. One is a Cunningham cx-301-a, Televocal 201-A, and RCA Cunningham Radiotron type .01-A.
Lol, to think that this was someone's pride a joy at one time. Give me a fully digital x-ceiver any ol' day.
Any idea what this thing is worth? All the screws and the dials are attached. I thought that someone had replaced some of the front panel screws but since the color pattern matches I guess not. I mean that there are 8 silver screws around the perimeter and 8 black screws inside those.
Serial number for unit is 139527. Does that mean unit was built in 1927?
E-mail me at Tech25@yahoo.com if you have any information or want to discuss unit.
Bob

Just buy Samlex America SEC1223 and forget your problem, exellent PS
for HF/VHF/UHF rig.
All you need for mods - add simple slide switch 110/220 V.
WBR,
DIA

Have for sale:
2 units in like new condition and are identical

Compaq model Deskpro 5100
Intel Pentium 100 - 100mhz processor - up-gradeable to Pent 166
16mb of D-Ram - uses 72 pin ram - upgradeable
850mb IDE hard drive by Quantum
8X SCSI CD-Rom Drive
3-1/2"-1.44mb Floppy drive
Sound Blaster compatible sound card
1-open bay for Tape drive or ??
1mb on board SVGA video
2-serial ports
1-printer port
1-bus mouse/ps2 style port
2-open (un-used) ISA/16bit slots
1-open (un-used) 32 bit PCI slot
Keyboard an Mouse
Win 95b installed
This is the late version of the Deskpro 5100 series computers which
Compaq produced before going to the 6100 series. They are extremely good
for RF tight applications and do quiet on the HF bands. I am using one
in my own station. All metal case with finger stock around connectors.
Both units are in excellent condition and look as new. No scratches or
dings.
Price - $190.00 with 14" SVGA monitor - $215.00
with 17" .24dp SVGA color monitor - $315.00
Plus shipping Continetal US.
Thanks for reading and 73 de Dave K4DLJ Darlington, SC

3207. WANTED: Panel meter for Lambda PS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-11 00:00:00 UTC
From: Richard <rhager@ahha.com>
Message-ID: <37B1B655.AA23B720@ahha.com>
Source record: 101558

Hi,

I need an ammeter for a Lambda LMK360 power supply.

It's one of those meters with all 4 sides slightly
curved. Made by GE maybe??

It's the size which is about 2.5" across the face, and
fits into
a 2.125" hole.

Something which already reads 0-100 amps would be
great, but I could
work with just about any amp/milliamp model by redoing
the face and the shunt.

Please click 'reply:both' so I get a direct email too.

Thanks very much!

Richard

Date: 1999-08-11 00:00:00 UTC
From: Richard <rhager@ahha.com>
Message-ID: <37B1B7DD.5DE8EA8A@ahha.com>
Source record: 101559

Hi,

My brother's gotten real interested in becoming a ham
too, and
building his own antennas. So I'd like to get him some
books.

Would like a recent ARRL and/or RSGB handbook, recent
Antenna Handbook,
and recent "Now You're Talking" or similar tech-class
study guide.

Recent means....oh, past 5 years I guess, except for
the study guide,
which needs to be 'current'.

Could also use a pair of MFJ or similar code-practice
keys.

If you have some extra books you'd like to clear out at
a bargain,
please email me.

Thanks!

Richard

Message-ID: <7osf53$g5e$1@bgtnsc02.worldnet.att.net>
Source record: 101561

I am looking to purchase an HT. However, the choices have been narrowed to three contestants. I am appealing to the experience of this newsgroup in helping me resolve this "debate" concerning the three HT's.
1). Contestant number 1 is an Icom IC-T8A Tribander. I have been told that this particular unit is not capable of programming European reapeaters?????
2). Contestant number 2 is an Icom IC-W32A Dual bander. Yes, I am aware that I am comparing a dual bander to a tribander. IS the extra band really worth the features that this unit might possess?
3). COntestant number three is a Yaesu FT-50RD Dual bander. I have been told virtually nothing concerning this unit other then the advertisements of various catalogs.
All three of these rigs possess a max. output of 5watts(without a docking booster). I am wanting to know arguments basically for which unit is a "better buy?" MOney is not really of any concern. I am more interested in reliability and flexability to other repeater environments. Any help that could be given in this matter would be taken with utmost gratitude.

Shawn,

I just went through almost the same thing. I was comparing the Icom W32a with the Yaesu FT-51R. I ended up settling on the FT-51R. I have been very pleased with this particular HT. What specific features are you looking for? I'm currently looking at buying the W32a, and running both HT's to determine which one I like best. I will say that I'm please with the FT-51R, except for its small foot print (with the length of the antenna its very easy to knock over.) Computer programmability was a major consideration in my purchase, and both the W32a and the FT-51R are PC programmable....

If your considering the Comet SMA3, (144/430/900MHz) I've tried it
on 900MHz. I haven't tried it for 144/430 yet. If performance on 900
was any indication, you can stuff your ink pen in the radio's sma
connector and get about the same results while saving $ 30.

Hi All,

I just finished the restoration of two Heath AT-1 transmitters. I started with four. I have a box of AT-1 parts that consists of most of two transmitters including transformers, chokes, front panels (one without extra holes), some of the tubes, coils,
knobs, two chassis and one cabinet. All as is, and available in one lot. I would like $50.00 shipped to your door in continental USA.

73,
Bob, N6CM

Apparently you do based on this post and the fact that you
felt the need to delete both my comment and your nastygram
that elicited said comment.

> ANYONE can look at this thread and see a healthy, analytical dialogue
> between the original poster and myself.

If your original post was so perfect why delete it?
Folks seem to be tired of this little spat so I am outta
here until your next nasty post. If your posts are not nasty
you won't be seeing me any more. You can shut me up Clint it's
very simple you know how. It's up to you Clint.

>
> Then you enter the thread, and it degrades.
>

No Clint when I enter the thread it is because you were nasty.
You have been nasty to me, to Goran, and a host of others and I'm
simply fed up with your mouth. If you don't want your feet held
to the fire don't build a fire.

Hi folks,

Looking for a very-good-shape Kenwood R820 receiver
(companion rcvr to the TS820 receiver). Always
wanted one....

Minor nicks/scratches on case/paint are OK, and I
can figure out how to fix 'em up, but front panel
should be pristine - unscratched, all legends
intact, all knobs, etc.

- Please don't direct me to an E-Bay auction
as I do not do business with 'em.

- Please reply to wiese@jps.net in addition to NG,
as my NG server may occasionally be a bit flaky.

Thanks!

From: Frank Dubec <frankdubec@earthlink.net>
Message-ID: <37B1EEE7.50EF@earthlink.net>
Source record: 101580

My TS-50 VFO is 1 Khz. low. e.g VFO displays 7.250 and really xmits and receives on 7.249. This is common on all bands. I tried adjusting the reference freq. trimmer cap. TC-1 but it won't correct for 1 Khz.
Is there a way to change the displayed freq. rather than the ref. freq.??? Or.... do I have a bad 20 Mhz. (X1) xtal???

Anybody have any suggestions??

Tnx

> They are VERY poorly made radios that fall apart easily.

Only two experiences with Alinco, the first was with the credit card HT, the UHF version, the recieve failed after about 1 month, I sent it back and had it returned in 1 week. Worked fine ever since.

The second was with a DX-70T, simple radio, clean display, has worked very well and performed beyond my expectations. Audio very nice and good filtering in wide and narrow mode. Paid $690 for mine on a closeout from AES. Very very happy with the radio. For the difference in price to the the FT-100 or 706 Mark II you could buy a separate 2/440 rig.

What WOULD be EXTREMELY helpful, is to pick a random number of items from each maker, and list condition/price.

SOME folks make these types of goods available at pretty reasonable cost - OTHERS consider them to be gold - and THOSE may not even be worth the price of the phone call...

I live in Vacaville, not TOO far from you, love old BA stuff, would LOVE to see yours if I really had reason to suspect it is decent stuff at decent prices...

Can you provide samples?

Agreed! I have a DX70TH with the EDX-2 autotuner that makes
a very good easy to use rig, anywhere...just string up 60 ft
of wire to whatever supports are at hand,(I carry some
swaged aluminum tubing that makes a 12 ft pole) lay another
40 ft or so on the ground for the counterpoise, and go on
the air, any HF band. And be HEARD. Even tunes up easily on
160, though I haven't yet used it there.
I used this setup camping in a motorhome for 2 and a half
weeks earlier this summer including field day, at a Corps of
Engineers lake with the antenna wire not over 10 or 12 feet
off the ground, and made all sorts of GOOD contacts.

Thanks, but actually I need more range than that provides. I guess I should have been more specific. The transmitter is going to be placed in a model rocket for transmitting data from science experiments. Currently, we are looking at altitudes of around 50000ft, possibly higher at a later date. Also I have access to the TTL (5volt) data stream coming out of the micro so the transmitter doesn't specifically have to take RS-232.

Thanks

Hello All,

I am looking for plans for a 2m folded dipole.
We are trying to make an antenna for a 2m
repeater, and I was told that a folded dipole
may do the trick.

I would also like some info on how to phase them.
We plan on phasing 4 of them together.

If you can help, please E-mail me.

E-mail: mikrounit@hughes.net

Hi there
I have for sale a Kenwood TS-450SAT in excellent condition. It has a
couple of small scratches on the top but the front panel is pristine.
Electrical condition is perfect and it puts out full power. It has no
filter
installed but can hold three at the same time. I don't have the original
box, sorry. Comes with:

Power cord
Instruction manual
Programming manual
Desk mike (not Kenwood), never got the hand mike.

Asking $800. U.S. including shipping and insurance.
Cannot ship COD from Quebec to the U.S., sorry.
Can give references of U.S. hams I have dealt with lately.

Inquire by email if interested.

Frank-

I suspect your trimmer capacitor is at the minimum-capacity end of its rotation, and still can't bring the crystal on frequency. The most likely cause would appear to be a defective crystal. (Try Kenwood Parts at (800) 637-0388.)

I installed the optional Temperature Compensated Crystal Oscillator (TCXO) in mine, which required disconnecting a couple of resistors to disable the original oscillator. If you bought it used, perhaps yours has the TCXO installed, so adjustment of the original trimmer will have no effect. (If so, I wouldn't expect the error to be that bad!!) If that happens to be the case, the TCXO has a trimmer that can be accessed by peeling back the top left corner of its label. Mine was located under the "E" in "Kenwood".

To adjust it, I used 20 MHz WWV as my standard. The beat note seems to be enhanced by listening in FM mode. If you can't hear the beat note, tune it so that 20 MHz WWV's tone has the same audio pitch in both upper and lower sideband, as it has on AM. However, to do this, you MUST be sure that the ten Hz and 1 Hz digits are each zero.

The VX5R is the winner hands down, and also has the tone burst for european repeaters

I am looking to purchase an HT. However, the choices have been narrowed to three contestants. I am appealing to the experience of this newsgroup in helping me resolve this "debate" concerning the three HT's.
1). Contestant number 1 is an Icom IC-T8A Tribander. I have been told that this particular unit is not capable of programming European reapeaters?????
2). Contestant number 2 is an Icom IC-W32A Dual bander. Yes, I am aware that I am comparing a dual bander to a tribander. IS the extra band really worth the features that this unit might possess?
3). COntestant number three is a Yaesu FT-50RD Dual bander. I have been told virtually nothing concerning this unit other then the advertisements of various catalogs.
All three of these rigs possess a max. output of 5watts(without a docking booster). I am wanting to know arguments basically for which unit is a "better buy?" MOney is not really of any concern. I am more interested in reliability and flexability to other repeater environments. Any help that could be given in this matter would be taken with utmost gratitude.

Can you tune with the up and down controls on the mic? If so, move the frequency or go to another band and try to transmit.

It seems to me like there was a bad VFO encoder issue with that radio. There was a thin plastic washer used as a bearing. The sticky stuff would come off and the washer could gum things up in the encoder.

Good luck,

Cross-posted to: rec.radio.amateur,rec.ham-radio.swap,rec.ham-radio,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

You CANNOT miss this deal if you are looking for a UHF/VHF HT!

I have for sale the following items-
An Icom W32A HT: The radio is in MINT/PERFECT condition! It has NO dents, scratches, or other damage and no signs of wear. I have all of the ORIGINAL documentation, including the manual which came with the radio. I have its ORIGINAL box and all the paperwork for it. I purchased it from Ham Radio Outlet in New Castle, Delaware about 1 year ago. I am the ONLY owner of this radio and it was used as a backup radio. The radio has had VERY LITTLE use and the battery has been charged and discharged only twice. I have performed NO MODS at all on the rig.

That is not all, however!
I am looking to sell with the radio-

An MFJ Dual Band 144/440 MHz Antenna which works well with the radio (model MFJ-1724B). I have the original packaging for the mag-mount antenna and it is in very good condition.

A MAHA Speaker/Mic which also works well with the radio (model MH-800). I have the ORIGINAL packaging for the spkr/mic as well.

An ICOM Power Cable which supplies power to the unit from another power supply or from a carï¿½s electrical system. A cigarette lighter attachment can be added for more portability. This power cable runs the rig AND charges its battery. It is double-fused and in good condition.

A Radio Shack Discone Antenna for outdoor use. The antenna has very wide receive and transmits on 2m and 70cm (440). Please note that I DO NOT have the cable for attachment between the radio and the discone antenna. That would have to be purchased/made separately.

If at all interested, please contact Mark at hr_rig@hotmail.com I am an individual selling one unit with all of these accessories. I AM NOT a reseller. Please feel free to email any questions, concerns, or requests to that email address as well.

All serious bids will be considered!

Mark - hr_rig@hotmail.com (if telephone works better, please email me here and we can set up a time to talk!)

ps. Of course, the wall charger, rubber duck antenna, and all other accessories which came with the unit are included. I even have the belt

clip and wrist strap STILL IN THEIR ORIGINAL, FACTORY SEALED POUCH!!!
Email me soon... hr_rig@hotmail.com

3262. FS: Kenwood 2 Meter All-Mode Mobile & Accessories

Source record: 101345

Hello,

I have for sale or trade a Kenwood TR-9000 2 Meter USB/FM/CW/LSB
Mobile rig. It works great and is in very good shape!

Dimensions of the radio:

6-1/2" W x 2-1/2" H x 9-1/8" D

Weight: 5.5 lbs

The rig operates from 143.900-148.895 MHz
The rig does have memory channels, 5 of them.
This is the one that has RED easy to read Digital Display.

What is included:

TR-9000 2m USB/FM/CW/LSB Mobile rig
BO-9 Base Unit for this rig (Turns it into a base setup)
Base Microphone
Communication Specialists TE-32 PL Encoder, w/box & manual
12 VDC Power Cord
Operating & Service Manual for the rig

I thought that this rig was sold, but I cannot get a hold
of the guy who was suppose to get it. It has been well
over a week. So, this is why I am posting this again.

As said above, this includes the Comm. Spec. TE-32
PL Encoder, so you can use the repeaters out there.
Everything is in working order.
I am asking $275 for all.
If you are interested in it, please E-mail me or call me.

Phone: (661) 272-6949

E-mail: mikrounit@hughes.net

Robert Brandon wrote
>Everything works, except when the software polls the rig
for >frequency,... [the] CW keying hiccups.

I've never noticed that problem in my TS-870 with either the
Kenwood software or my homebrew (QB and VB)software. I'm
guessing the 570 control circuits are similar since the
Kenwood 570 software is similar and actually works on my
870 for the controls it supports. (BTW I'm not familiar with
DX4WIN)

If you're using a paddle, a real easy fix would be just to
use an external keyer. But that DX4WIN is likely a DX
program that needs your keyboard input to log with.

You might try increasing the port Baud rate, if the 570 and
your program allow it. It could be the buffer is clearing
too slowly. The TS-870 allows Baud rates up to 57600.
(Unfortunately my old VB1 and QB4 programs won't support
that...)

While looking at the three digit code on the battery from left to right. The first number is the year and the second two numbers are the month. So a date code of:

932= the 32nd week of 1999.

Doc

From: warphead@my-deja.com
Message-ID: <7ovledtas1@nnrp1.deja.com>
Source record: 101366

Hello,

Could someone be so kind as to try to explain to me the difference between a 12.5khz and 25khz VHF radio?

Are the 2 radio types compatable? Will they work together? Can you mix them? i.e. a 25khz repeater and 12.5khz handheld or mobile, 25khz simplex to 12.5khz simplex.

What types are allowed where? I am asking specifically for a commercial system. Apparantly, we have a 25khz repeater and I ordered 12.5khz radios.

Will they work? Will there be degredation? Or will I need to return the radios to Motorola.

Thanks

3291. FS: $750.00Henry Radio 3000 watt generator/pwr amp and supply

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-12 00:00:00 UTC
From: Norman Gillaspie <norman@pcseng.com>
Message-ID: <37b374fb@jolt.pagesat.net>
Source record: 101374
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

I have a Henry Radio generator that
has a 3CX3000 tube and amplifier stage.

The unit has a 14MHZ crystal oscillator followed
by a push-pull solid state pre-driver.

Both Solid the pre-driver and driver run off 28 volts.

The pre-driver uses a pair of MRF433 transistors and is
right out of the Motorola App notes.

A 300 Watt push-pull solid state driver amplifier is right out
of the Motorola APP note number EB27A it has 12db of gain
and will output 300 watts using MRF-422 transistors.

These amplifiers drive the 3CX3000 output stage.

I believe this unit can be modfied for a straight amplifier.

It looks in good shape.

It includes the power supply.

The final test report in indicated the following.

plate current .998 amps
grid current .300 amp
PA Voltage 4200 volts
PA Filament 7.6 Volts
3-23-95

The amplifier is in a 45 inch tall by 19 inch rack.

The unit has three sections which can be removed as a unit

3CX3000 tube amplifier section in a chassis with matching circuits
turns counter etc.

The solid State driver section with 28VDC supply

High voltage power supply. I have pictures I can send via email as
PDF files just ask.

I believe it works. I am trying to get schematics

However I am selling it as is. These units were used as RF Sputtering
sources.

I am asking $750.00 for this unit.

From time to time I get various pieces of RF equipment forsale to hams. If you would be interested in being notified when I have equipment forsale please
send an email to norman@pcseng.com and say add me to the list.

3297. Help with Icom 24AT ...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-12 00:00:00 UTC
From: Ken Burton <kgburton@mmm.com>
Message-ID: <37B39094.A5AF6001@mmm.com>
Source record: 101380

I have an IC-24AT without a manual. I need some instructions on how to control the settings (in particular setting the guard tones). Is there anyplace where I can get a PDF of the manual? My buttons are also worn so that it is difficult to remember what functions the buttons do.

Thanks
Ken

Cutting through all the BS and eggo trips between Clint and GGS.
In the beginning there were some problems with both ADMS and EVE not setting half frequency bits in the radio on 2k5hz or something like that.
Have you tried manually entering the desired frequencies and seen the result.

Things like cables will give clone error.

The question I have is are you ussing the standard belt clip. As oversize screws can kill 70cm output power.
Did the radio use to hit the repeater OK?

Cheers
Eric.

Source record: 101456

I've gotten a lot of responses with a lot of suggestions, and I appreciate all your input into the matter. One thing in common, all want the radio for parts, so here's my angle: I need the MARS / CAP mod for the Yaesu FT2600 mobile. I've talked to Yaesu tech support who said they would give info to a valid MARS / CAP certificate holder, which i'm not. I know this radio's not type accepted...blah blah blah...but this is a fine radio, and I would like to put all my ham / public service stuff into one field programmable radio. Whoever can get the mod for me first will get the radio and mic, I'll even pay shipping. Please help!!! This info is available for free out there, just takes resources that i don't have....
Thanks a ton everyone!

Advanced Receiver Research preamp. These have the highest signal to noise ratio of any amateur radio Preamp available. Model SP144VDG. They have a built in RF TR relay that will handle 25 watts. Just add 12 vdc and plug in the antenna. This is a perfect match for Yaesu FT-726R but will work with any of the radios with 25 watt or under transmit power. Excellent condition, great for 2 meter SSB work. $75

Hi there
I have for sale a Kenwood TS-450SAT in excellent condition. It has a
couple of small scratches on the top but the front panel is pristine.
Electrical condition is perfect and it puts out full power. It has no filter
installed but can hold three at the same time. I don't have the original
box, sorry. Has the auto tuner inside. Comes with:

Power cord
Instruction manual
Programming manual
Desk mike (not Kenwood), never got the hand mike.

Asking $800. U.S. including shipping and insurance.
Cannot ship COD from Quebec to the U.S., sorry.
Can give references of U.S. hams I have dealt with lately.

Inquire by email if interested.

73 de VE2CJW
Michel in Quebec.

I agree to all, I had a DX-70T for a year, (had to sell it when I got married, you know the drill) and used it on field days and mobile and in the shack, never had one problem with it. I used it, but did not abuse it as I would any piece of equipement whether I paid $20.00 or $2000.00, and did not have the seperation cable, so I cant comment about that, but always got good signal reports. Had alot of fun on 6 meters, good audio to, liked the CW filter. And yes it does have general coverage on recieve, used it for WWV and the BBC alot! Great radio!

Message-ID: <37B2CE6C.9B08C0B1@juno.com>
Source record: 101469

Thanks for your reply! The QRM is only coming in on the mic lines themselves. I connected the PA to a completly different AC source and still got the QRM. I tried an expieriment by running a good shielded mic line away from the front of the church and pipes, I had to get the mic about 30ft away before it would not pick up the QRM. I also grounded the PA to a water pipe, not knowing for sure about the integrity of AC outlet ground. I dont think that filtering the AC line on the orgran would help, since its not coming in through the AC line, just the mic lines. If I had a spectrum analyzer I would be able to see what spectrum the QRM is on, I know that I can recieve the QRM on my AM radio in my car in the parking lot about 200ft away thought, loud and clear! Thanks again for your advice, I will double check the AC side of the problem.

I also saw the advertisement and am considering the radio for the price. The only downside of this radio is that the
ctcss tones are selected from a dipswitch under neith the radio and the smallest tuning steps are 20 hz. (sort of choppy for ssb). Still, how many HF radios100 watts with 10 watts on 6 go for $600.
I used the DX-77T at a friends and it is decent. Last Year Tech America had a special for $575.
Basically, I would check Tech America's
Website specials each month or subscribe for specials . Some of the deals are great.

Date: 1999-08-12 00:00:00 UTC
From: Chris <ck5@ix.netcom.com>
Message-ID: <37B2ED26.729F@ix.netcom.com>
Source record: 101474
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

This is a brand new in the box 2.8KHz wide SSB Filter. This can replace the 2.4 filter in the 706, MK11, MK2G, to add a more bandwidth to the transmit audio. This makes a great improvement to the audio on these rigs which sound normally pinched. Requires soldering in where the 2.4 filter was. Exact fit. Takes about 10 minutes to do.
$50 shipped.

3326. 1999 Fingerlakes NY Hamfest and Fly-In

1999 Fingerlakes NY Hamfest and Fly-In

Saturday, August 21, 1999
General Admission beginning 7:00 AM, vendors 6:30 AM

Great Door Prizes!
Airplane Rides available from FAA certified commercial pilots!
Inexpensive seller space!

Tompkins County Airport
Brown Road, Ithaca, NY
Near the Intersection of Rte 13 and Warren Road
Talk-In via 146.970- Repeater (Ithaca, NY)

Our new location offers:
- Huge airplane hangar with plenty of indoor space
- Breakfast and lunch starting at 6:30 AM
- VE testing onsite (pre-registration preferred)
- New equipment dealers
- Paved flea market and parking areas
- Friday evening setup available
- Handicapped accessible

Admission: $5 door, $4 advanced , under 18 free
(no advanced tickets after July 31, 1999)

Selling space charges:
Indoor tables: $10 / 6 foot space, table supplied
Outdoor spaces: $2 / 8 foot space, table not supplied

Indoor vendor setup 6:30PM - 9:00PM Friday August 20,
and resuming 6:00AM Saturday August 21.

Pilots: Fly in to our Hamfest!
- Tower: 119.60
- ITH VOR 111.80
- ATIS 125.175
- Unicom 122.95

The trimmer cap will compensate for an error much greater than +/- 1
khz. Are you sure you are adjusting the correct cap??

Yes the DX70T/TH does incorporate HF general coverage
receive.

3330. Re: Future trends & recommendations in UHF/VHF mobile rigs

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-12 00:00:00 UTC
From: kb0haespam.stinks@arrl.net
Message-ID: <37b2e142.616049@news.mcleodusa.net>
Source record: 101479

Hi Robert. With the size of the mobile trancievers shrinking, there would probably be room for a dual band (2m/70cm) tranciever combined with an AM/FM/cassette, or AM/FM/CD stereo unit that would fit in most any vehicle's dash. There would be some interesting possibilities. Such as having true dual receive, and having 2m use say the right speaker, and 70cm use the left speaker. These could be the regular stereo speakers, or there could be other arrangements. Like having sterio speakers in the rear deck, and the front doors, and using the speakers in the dash (or 2 communications speakers, such as the ones from Rat Shack) or elswhere. Another option is to be able to listen to music until a signal breaks the squelch on 2m/70cm, or until the mic is keyed.

Also, maybe in a few years, we could see an HF/VHF/UHF integrated with an AM/FM/CD stereo. Maybe with the stereo's front panel acting like the removable face plate on say a 706MKII, with the actual ham rig mounted elsewhere. Just a few of my own thoughts on the matter.

Source record: 101480

Hello,

I've got an Icom IC-02AT in EXCELLENT condition with the following
accessories:
1 - BP4 battery packs (also in EXCELLENT condition)
1 - DC1 pack (in very good condition)
1 - HS10 boom mike (needs new pad for ear piece) that has been modified
to hold a BNC antenna
1 - HS10-SB PTT switch box for the HS10 (in EXCELLENT condition)
1 - HM65 (?) Speaker / mic (in VERY GOOD condition)
1 - BC-25U Wall charger
***** Looking at the price lists on the web, that's over $300 worth of
accessories alone!

I don't have the manual for the unit, but it all works great!

I'm asking $225 O.B.O. (you ship) for the whole package.

I DO NOT want to sell this in pieces, it's all or nothing.....

I don't where this figure came from, but my DX-70T will tune in 10 hz
increments. Just fine for SSB. The tune rate is selectable from
the menu I do believe. I think you'll find they will all
tune down to 10 hz.

I use their notch filter, too! Excellent construction and performance
especially on wideband RX 2m rigs and dualbanders. I notice that the
original poster is in Canada. I don't know if their pager frequency is
also in the 152MHz spectrum, where the notch occurs.

Best 73!

I have an as new Icom dual band ht with several included options. This ht is for 2m and 440Mhz. The ht is in perfect condition and is a 10 out of a 10 functionally and cosmetically. the ht has a control panel that detaches from the body of the radio which provides a fully functional speaker microphone and displays all operating conditions. The Z1A has an alphanumeric display, alphanumeric messaging and paging, backlit keypad, independent tuning knobs plus many other features. This ht has an extended receive from the factory and there are many modifications that can be done to enhance the radios capabilities. I am selling this ht with 4 battery packs, aa battery case, cigarette lighter power cable,speaker microphone, vox headset with microphone and a Comet high performance rubber duck. I am the original owner and have all the boxes and owners manual plus all of the standard accessories that came with the unit.
$300.00 including shipping. n8ihs@home.com

1425MHz is the image frequency, since the I.F. is 275MHz.
It is still illegal to sell or use such an equipment in the U.S.,
regardess of what frequency happens to show on the LCD of the radio,
with severe penalties.

As you've probably guessed already, the middle terminal is used to charge the battery. By having separate contacts for charging and discharging the batteries, it's possible to have battery packs that can be charged on the radio (NiCd, NiMH) and other packs that can only be discharged (alkaline).

I've got one and it gets hot as well. There's nothing wrong, the die-cast aluminum chassis serves as a big heat sink. I find that if I'm in a long qso, i hold the radio by the sides without touching the back....or use my speaker mike.

I do love the radio in spite of the heat!

3350. SV: Yaesu VX-5R

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-13 00:00:00 UTC
From: SM6OWQ <sm6owq@home.se>
Message-ID: <1n_s3.1420$7d.3209@nntpserver.swip.net>
Source record: 101396

I also like my VX-5R very much but don't use higher power than "L1" (300mW) except for emergencies.. if higher ERP is needed i recommend use of a better antenna..
By the way i have noticed that the low battery symbol appears when transmitting with higher power even when the battery is fully charged..! this is due to the Lithium-Ion batterys charachteristics and very limited current output..!

3351. RADIO SHACK's new 10M mobile....

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-13 00:00:00 UTC
From: advanspec@aol.comburger
Message-ID: <19990813160403.27924.00000469@ng-cj1.aol.com>
Source record: 101397

Here's some interesting news.....
The new HTX-10 all-mode 10M mobile will appear in the new RS 2000 catalog due out in about 2 weeks. Features 25W output on SSB & FM, does AM too, split frequency and full freq control, full 10M, not stuck in "bands or channel steps" & has memory channels. The catalog price is $149.99 & the radio looks alot like last year's Radio Shack SSB CB (I think it was called the TRC-485??) and also like the similar "eagle" & road force "export" rigs. Knowing R/S, it is most likley not going to be easily modifiable to CB, but if it is the $149 price is going to give the '2950's and the new Delta Force Magnums that sell for well over $240 a kick in the pants. I'm not impressed with the Xmit audio & recieve on the similar looking rigs, but that price still has to be the lowest retail on an all-mode 10M radio w/full freq display (and between "employee discounts, Sales and franchise dealers, the price will go lower). This wasjust someinteresting news I came across.....we do not carry Radio Shack products.....

- Goto menu 21 (Key)
- select M/T
- select MON

The other option (you currecnty have) TCAL is transmitting
the european 1750 repeater tone

Cross-posted to: alt.ham-radio.vhf-uhf,alt.ham-radio.nocode,alt.ham-radio.packet,rec.ham-radio,rec.ham-radio.swap,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

You CANNOT miss this deal if you are looking for a UHF/VHF HT!

I have for sale the following items-
An Icom W32A HT: The radio is in MINT/PERFECT condition! It has NO dents, scratches, or other damage and no signs of wear. I have all of the ORIGINAL documentation, including the manual which came with the radio. I have its ORIGINAL box and all the paperwork for it. I purchased it from Ham Radio Outlet in New Castle, Delaware about 1 year ago. I am the ONLY owner of this radio and it was used as a backup radio. The radio has had VERY LITTLE use and the battery has been charged and discharged only twice. I have performed NO MODS at all on the rig.

That is not all, however!
I am looking to sell with the radio-

An MFJ Dual Band 144/440 MHz Antenna which works well with the radio (model MFJ-1724B). I have the original packaging for the mag-mount antenna and it is in very good condition.

A MAHA Speaker/Mic which also works well with the radio (model MH-800). I have the ORIGINAL packaging for the spkr/mic as well.

An ICOM Power Cable which supplies power to the unit from another power supply or from a carï¿½s electrical system. A cigarette lighter attachment can be added for more portability. This power cable runs the rig AND charges its battery. It is double-fused and in good condition.

A Radio Shack Discone Antenna for outdoor use. The antenna has very wide receive and transmits on 2m and 70cm (440). Please note that I DO NOT have the cable for attachment between the radio and the discone antenna. That would have to be purchased/made separately.

If at all interested, please contact Mark at hr_rig@hotmail.com I am an individual selling one unit with all of these accessories. I AM NOT a reseller. Please feel free to email any questions, concerns, or requests to that email address as well.

All serious bids will be considered!

Mark - hr_rig@hotmail.com (if telephone works better, please email me here and we can set up a time to talk!)

Of course, the battery wall charger and an original battery are included as well as all of the other parts in the original box!

3358. FS: Kenwood TS570D HF rig

>Is anybody else having this problem with their VX-5R? What is the cause?

The basic cause is that handhelds are (very roughly) about 50%
efficient at generating RF. If you have the radio set for 5 W of RF
out, there is about 10 W of power being drawn from the battery. 5 W
ends up as RF, and the other 5 W is dissipated as heat inside the radio
- mostly by the power amplifier module. Smaller radios make the
problem worse by having less mass to dissipate the same amount of heat
into, so the radio gets hot faster than a physically larger radio
operating at the same power.

However, you hardly ever need 5 W of output. Use the lowest power that
still provides readable communications, and you will usually be well
below 5 W. Heat buildup will be less of a problem, and the battery
will last a lot longer.

If you really need a radio that can operate at 5 W output continuously,
you don't want a handheld. Mobile radios, with their fan and much
larger heatsink, will operate at 5 W indefinitely while remaining
cool. Even they won't operate at full output indefinitely (40 or 50 W)
without getting hot. Repeaters, which can be on continuously for long
periods, use radios designed for continuous transmit.

Dave

He told you:

> >...Cond.on the radio's are from parts rigs to very good/ex.

I drove to Redding yesterday, and bought one radio from him at a very
fair price. The price reflected the fact that it wasn't tested.
I would have bought several more, if I had the money available.

Imagine a storage unit FULL of boatanchors, Hallicrafters, National,
Hammarlund, and ones I'd never seen before in my 49 years as a
ham, like Breting and Meissner and Patterson. And this is just the
recievers!

Give him a call. He's friendly, and his descriptions when I talked
to him on the phone turned out to be accurate when I got there.

73,

John, K6QQ

Howdy! ��� I'm "Mike not Mic"!

I have these:

1. Icom 229H 2m Mobile
2. Kenwood 7400 2m Mobile
3. Azden 2000 2m Mobile

Now don't get to excited...I'm not going to give you all of these for your HT. Wait....maybe I spoke to soon...maybe you got one of those HT's that is to good to be true. What I'd like is, a Good-N-Tuff High power HT with hardy battery(s).
I need the to use the HT for when I'm out hunting this deer season. I might be dreaming but, if I get a 300 pound White Tail with a 20 point rack, I might need to call for help to drag it out. Or the real side of this is, I might want to order pizza to be delievered out at the hunting gounds due to I frightened off all the deer and I forgot my to bring my doughnuts again.

Send all traffic to w5old@sonetcom.com

Hi there
I have for sale a Kenwood TS-450SAT in excellent condition. It has a
couple of small scratches on the top but the front panel is pristine.
Electrical condition is perfect and it puts out full power. It has no filter
installed but can hold three at the same time. I don't have the original
box, sorry. Has the auto tuner inside. Comes with:

Power cord
Instruction manual
Programming manual
Desk mike (not Kenwood), never got the hand mike.

Asking $800. U.S. including shipping and insurance.
Cannot ship COD from Quebec to the U.S., sorry.
Can give references of U.S. hams I have dealt with lately.

Inquire by email if interested.

3386. Radio Gear FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-13 00:00:00 UTC
From: oris@dirtball.com
Message-ID: <7p05rn$7tm$1@nnrp1.deja.com>
Source record: 101497

I have three peices of radio gear for sale.

1) Yeasu FT 2400 50 watt 2-meter moblie $150.00 you pay shipping and insurance. This is a good little 2-meter rig apperance wise its a 7 on a scale of 1 to 10. It comes with a keypad mic. Drope me a line if you are interested.

2) A Kenwood TS 120 moblie HF rig. This rig is a very simple HF rig. It covers the convental HAM bands 80 thru 10. It does about 70 watts out and is a again a 7 on a scale of 1 to 10. I'm asking $300.00 for the radio mic and power cord.You pay for the shipping and the insurance.

3) Dentron Clipperton L HF amplifier. I have $550.00 in the amp, with all the work I have invested in this amp that is what I have in it. But in all farness the amp isn't worth what I have in it so my asking price is $400.00. You pay shipping and insurance. This amp has been redone inside. I replaced the caps last year. It now ask 220uF caps in the power supply in stead of the 100uF and it also has new 1N4007 diodes too. The band switch is also new. The 572bs have very low use. I put new 572bs in the amp back in Feburay. I think I have fired it up 3 times since then. This amp is my back up. I run a SB 220 and I have another amp coming from Maryland for a back up amp. Its a pair of 813s built in the 1960s by my grandpa. Fullwave bridge powersupply the whole nine yards. So I don't need the Clipperton L any more.

I'm looking to get another HF rig. My TS 930 power supply crapped on me. I have ordered a new Power supply board for the rig and I just put a new PLL board in the rig. I really will not know what the damage is until I get the new power supply board installed.
I will also listen to any trades that anyone might have to offer for all of the equipment above. Heck I'll swap it all for another WORKING TS-930S/AT with the AM filter or TS-940S/AT with the AM filter.
I also have the Narrow CW filter that I would trade for the 6 KHZ AM filter that goes in the TS-930S/AT.
Thanks for reading and 73 from Oris

3387. Grid Driven 4-1000 amp schematics anyone???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-13 00:00:00 UTC
From: Tim <tvendt@kear.tds.net>
Message-ID: <3mMs3.101$Sr3.14016@ratbert.tds.net>
Source record: 101498
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi.... I am in the process of putting together a bunch of stuff that I've had kicking around here together to make a 4-1000 amp... I have at least a dozen schematics for GG amps but almost nothing for Cathode grid driven amps using the 4-1000. The only real drawback that I've seen so far is that it requires a slightly more complicateed power supply (screen voltage and the like) but I already have the stuff to incorporate that into it. The main advantage that I can see for this amp is that it takes very little drive to send a 2500 watt bird slug into oblivion (or at least to cause the needle in the meter housing this slug to gently tap the right hand stop pin). I can imagine, though maybe not rightly, that this amp may be a little more difficult to tame, parasitically speaking, but then I plan to swamp the heck out of the input grid circuit to knock down the input drive to a level that won't cause the tube to exceed the plate dissipation rating....in my way of thinking this would seem to knock down a "possible parasitic" enough to where it would never get started... where is Rich Measures when you need him...anyway, any info would be helpful I'm looking to start this project in the next 1-2 months....

You seem to have an attitude problem.. You want someone to send
you $2000.xx for a bunch of halicrafters radio,s and you do not even
say how many are dead or alive. For all anybody knows, these could
have been pulled from the "junk pile" at the last hamfest you
attended.. BE MORE SPECIFIC.

Bob

Hi Ken, I bought a new one about 9 weeks ago and have not had a lick of trouble from it. I dont like it all that well because of the menus and lack of knobs but as far as performance and versatility it is a super radio. If you are looking to buy one that has been "burned in" and tested I would sell this one. It has the AM filter and was modified by the vendor for open transmit. Included is a new FS-20 auto antenna tuner. I have all the boxes, manuals, and warranty card for the radio. You can not tell it from new. All shipped to you for $1200.

I have a nice JRC station for sale or trade.
It is the JTS-135 Digital Transceiver, Speaker, Power Supply, Antenna Tuner/SWR/Power Console and Desk mic. This radio will transmit 150 watts + on all ham bands. It is a 9.9 on a scale of 10 and comes with the operating manuals, service manual, and three page color sales brochure. Will ship it all to you for $1450 or trade for something of equal value. Email for photo.

Source record: 101523
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Looking for an Atatic "G" stand in excellent condition - actually, what I really need is just the base (paint is flaking badly on mine) the chrome handle, cord, etc. on mine are in fine shape - if you've got something laying around, e-mail me with price and specifics. I'd be interested in either the wrinkle finish or smooth finish - doesn't really matter.

Alternatively, if you know of a good "hammertone" type paint that I could use to refinish the base on mine, tell me about it!

73,

Source record: 101524

I have an FT-100 with the High Sierra HS-1500 mobile. I purchased the Yaesu at Dayton. So far it has not failed. One problem that stopped happening was transceiver turning itself 'off' when transmitting into a high SWR. I also have an Icom 706MKII. It has been trouble free and is mechanically a better design.

3414. Auction: HW-8 Manual and Hotwater HB

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-13 00:00:00 UTC
From: jbr101@my-deja.com
Message-ID: <7p1cms$11c$1@nnrp1.deja.com>
Source record: 101525
Cross-posted to: alt.ham-radio.marketplace,rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.swap

I have an original Heathkit HW-8 manual and a copy of the "Hot Water Handbook" for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=146218405

and the description is

An *original* manual for the Heathkit HW-8 QRP transceiver PLUS a copy of the legendary HW-8 modification text, "The Hot Water Handbook" by Fred Bonavita W5QJM. The Heath manual is complete and includes the giant 25" x 17" schematic and all assembly fold-outs and diagrams. One small tear on the front cover, otherwise in excellent condition. The Hot Water Handbook has chapters on Keying Waveform modification, An audio amplifier add-on, RIT modification, variable drive control, a new receiver front end (a great mod !), break-in circuit modification, 30 meter modification, inboard active audio filter, linear amplifier brick, VFO improvement, plus many more chapters on souping up the HW-8. Some mods also applicable to the HW-7. With these two publications you can repair your HW-8 and make modifications that turn this little rig into a really fine radio.

Closes 8/22/99.

I also have a GR-64, 1985 handbook, and a copy of Ade Weiss' book "The History of QRP in the US" on eBay so please check my other auctions.

Thank-you.

3415. Auction: Heathkit GR-64 Shortwave Rcvr

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-13 00:00:00 UTC
From: jbr101@my-deja.com
Message-ID: <7p1d2e$1c0$1@nnrp1.deja.com>
Source record: 101526
Cross-posted to: alt.ham-radio.marketplace,rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.swap

I have a Heathkit GR-64 shortwave receiver for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=146213481

and the blurb is

This is a Heath GR-64 superheterodyne general coverage tube-type communications receiver in excellent mechanical and electrical condition with spare tubes and whip antenna. Receives AM, CW and (with operator skill) SSB. There is an "extra" sticker on the back that I believe indicates that it was factory-built; at any rate it was assembled in an expert manner. The GR-64 (arguably) represents the pinacle of small tube-type receiver design, as it used a PC board to mount most parts and employed a solid-state power supply to cut down on internal heat, reduce warm-up drift, and prolong component life. This receiver also has a variable BFO and a noise limiter, both features not normally found on a small receiver. Covers .55 to 30 mHz, works well and includes spare tubes. Also included is a small whip antenna that I had mounted in one of the rear-panel ventilation holes; I removed it to make the radio "stock" but it can easily be remounted. Use of the whip antenna makes a "semi-portable" package that you can keep in a drawer until you're ready to listen, then put on your kitchen table to receive BBC and other international shortwave broadcasts. An outside antenna would provide better reception, but this radio does surprisingly well with only the small whip antenna. A small chip on the top of the front panel is the only noticable defect; no rust on case or chassis, knobs original and in good shape.

Closes 8/22/99.

I also have a HW-8 manual, 1985 handbook, and a copy of Ade Weiss' book "The History of QRP in the US" on eBay so please check my other auctions.

Thank-you.

Hey Tim,
I agree 100 percent. With my recent customer dis-service experience with that company in Plano,Texas I was forced to find a dealer elsewhere (300 miles elsewhere). Not only did it seem like they had the " You Buy from us, it's yours" attitude I felt in general like they didn't want my business because they had enough other business, or they had enough of me.. One of there staff, I believe, now understands my pain and is attempting to change their mindset. However it is too little, too late for me. My first, second and third impressions have all been less than spectacular. I have not been back since.
This whole experience with the other dealer in Plano,Tx has been very frustrating. Even the manufacturer sent me a note telling me, in great detail I was wrong, and how they support their dealer.

However, I have found that KComm in San Antonio Texas has been a very refreshing change. very cordial, that actually offer to help and have performed everything I have asked of them, no arguments. I had a question about accessories, they scanned the accessories page from a vendor catalog and emailed it to me so we could both see it and talk about it. Plus they had very competitive pricing and all the products I need.

It works well, though the low light sensitivity is not up to where I'd like.
I have a unit in the car, with the interface cable to the TM-V7. I think
they were a little silly not to power it from the car, since it does eat
batteries rather quickly.

This TR-4C station is in very good looking and good working condition.
All original and on the air. 8.5+ out of 10. Comes with a good copy of
the manual. The receiver is very sensitive on all bands and the
transmitter sounds good using three 6JB6 in the output. Just plug in the
mic and you are on the air with full output 80 through 10M.
$375 shipped
I have jpgs available if interested. 73 Chris VE3NGW/W4 Florida

I cannot believe that you purchased RV-75's for that price. Perhaps
you bought the non-synthesized RV-7's rather than the synthesized (and
very rare) RV-75's? The RV-75 should go for about $350-450. The RV-7
goes for $90-125.

Wow...that's weird...I was going to give you their Web site at:

http://www.peetbros.com/

Eddie - how did you "approach" them? I mean, did you tell them that your Web site is going to highlight the quality and affordable nature of their systems, and that you need this replacement part?

That sounds just too weird for a company like Peet Bros. to NOT support its clients with spare parts.

3451. Ham Gear FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-14 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <37B583A9.49E613FA@dirtball.com>
Source record: 101300

I have three peices of radio gear for sale.

1) Yeasu FT 2400 50 watt 2-meter moblie $150.00 you pay shipping and insurance. This is a good little 2-meter rig apperance wise its a 7 on a

scale of 1 to 10. It comes with a keypad mic. Drope me a line if you are

interested.

2) A Kenwood TS 120 moblie HF rig. This rig is a very simple HF rig. It covers the convental HAM bands 80 thru 10. It does about 70 watts out and is a again a 7 on a scale of 1 to 10. I'm asking $300.00 for the radio mic and power cord.You pay for the shipping and the insurance.

3) Dentron Clipperton L HF amplifier. I have $550.00 in the amp, with all the work I have invested in this amp that is what I have in it. But in all farness the amp isn't worth what I have in it so my asking price is $400.00. You pay shipping and insurance. This amp has been redone inside. I replaced the caps last year. It now ask 220uF caps in the power supply in stead of the 100uF and it also has new 1N4007 diodes too. The band switch is also new. The 572bs have very low use. I put new

572bs in the amp back in Feburay. I think I have fired it up 3 times since then. This amp is my back up. I run a SB 220 and I have another amp coming from Maryland for a back up amp. Its a pair of 813s built in the 1960s by my grandpa. Fullwave bridge powersupply the whole nine yards. So I don't need the Clipperton L any more.

I'm looking to get another HF rig. My TS 930 power supply crapped on me.

I have ordered a new Power supply board for the rig and I just put a new

PLL board in the rig. I really will not know what the damage is until I get the new power supply board installed.
I will also listen to any trades that anyone might have to offer for all of the equipment above. Heck I'll swap it all for another WORKING TS-930S/AT with the AM filter or TS-940S/AT with the AM filter.
I also have the Narrow CW filter that I would trade for the 6 KHZ AM filter that goes in the TS-930S/AT.
Thanks for reading and 73 from Oris

It expects an antenna with a roughly 50 ohm feed impedance at the operating frequency. If you supply it with one, it does an excellent job. Note, on the AM broadcast band, that would be a rubber ducky approximately 200 meters tall. The stock antenna is an extremely high impedance at AM broadcast frequencies, so it doesn't work well at all.

> looking to get IC 746 comments please

I have one and like it alot. Only suggestion I would have is to get the optional 9 MHz I.F. filters, either from Icom or InRad. Out-of-the-box, the selectivity is not the greatest. The QSK is excellent. The builtin tuner works well, even with high SWRs. The LCD display and menu system are easy to use. I have yet to find any useful purpose for the band scope, but have not made much of an effort to use it.

I have a complete set of Icoms -

IC275H
IC375A
IC475H
IC575H

All are in as-new condition. With all boxes, manuals, orig accys, etc. Used maybe two or three times. I also have one UT34 CTCSS board and one UT36 voice synthesiser board.

Can supply jpg pics. Guaranteed as advertized.

$4000 + UPS for the entire pkg.

I use two digital filters (W9GR III [A] and DSP-599ZX [B]) in a manner similar to your proposal. I wired a rotary switch such that I can use them as [A]-only, [B]-only, [A] feeding [B], or [B] feeding [A]. Thus, I have four possible combinations to use, depending upon the type of conditioning I want to do; a bypass switch bypasses both filters when I don't want to use them. The switchs and enough RCA jacks to handle all the inputs and outputs are mounted in a Radio Shack cabinet that sits next to my radios.

I concur. How difficult would it be to add a frequency doubler to the
board and make a decent little all-mode rig from the "export" rigs?

Imagine how many NCT's and Tech+ would gt on six literally "overnight".
I'd even add a 6M mobile.

For good, simple passive grid amplifier that works with any tetrode, go
to http://www.oceanfree.net/ei9gq.

In case I've got that wrong, just enter ei9gq into Alta Vista.

No complicated screen supplies. Circuit is based upon the G2DAF linear,
which was popular here in the '60s, using 813's.

>their systems, and that you need this replacement part?
Just told them I had a paddle bronen off in a storm. They replied "the assembly has to be individually calibrated", but it is simply a magnet and a metal strip inside a plastic hub that slides on and off. I was able to fabricate a replacement wind cup and balance the assembly to restore operation 'till the UV radiation got to my Plas-T-Pair. Have since purchased a new Davis Weather Wizard III which I believe to be a much better instrument and the Davis folks will sell replacement paddles etc.
>That sounds just too weird for a company like Peet Bros. to NOT support

On the chance that this whole message is some sort of an attempt at a sting: Get a life! Please bother a less educated, easier to pick on group of people. rec.drugs that don't hurt anyone but the user would be a suggestion.

On the chance that this is a serious message:

On Sat, 14 Aug 1999 06:22:15 -0700, Dwight Stewart <stewart@amouse.net> wrote:

> There must be five hundred darn scanners out there. Which one do I >buy?

And five thousand opinions! Take a look at www.strongsignals.net. Has lots of reviews and info, the guy running it seems to know quite a bit about the current radios. I have an old AOR-2500 and an Icom IC-R7100. The ICOM picks up things clearly that the 2500 doesn't even lock on to, but it scans slow.

> What is a good mid-priced handheld scanner that has easily >unlockable cellular?

There aren't any in the US. Anything that can be modified easily has been banned, in order to protect the feelings of people who think it will keep people from listening to their private conversations. Old ones that are open, or modifiable are often offered for sale, I believe legally, in various places.

> I don't need anything fancy. I just want to monitor a few 2m ham >frequencies, the local VHF/UHF police frequencies, and occasionally >listen to cellular.

For the local public safety, the radio probably doesn't matter too much, signals are probably strong. Same would go for the local repeaters. I'd suggest a little bearcat. You may want 800 Mhz, depending on where you live.

As to cellular - even if it were legal, from what I understand it's pretty boring.

Good luck, and sorry about the ranting.

Bill,

Once you have stored the frequency in a memory slot and selected
memory mode, shut of the radio, hold down the LOW/MN button (right beside
the orange power on button) and turn on the radio. Once the radio powers
on, press the REV button (farthest right button of the four below the LCD
screen) to enter the alpha mode. Once there, use the mike buttons to run
through the alpha chars, and press the LOW/MN button to go on to the next
one, press the VFO button to back up. When you're done naming the
channel, leave it alone for a few seconds or press the REV key again to
store it.

Any further questions, let me know.

I'm solving the same problem here with in-line female jacks, wired to
whatever the particular radio wants.

3490. Re: 12.5khz vs 25khz VHF radios

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-14 00:00:00 UTC
From: Ian Jackson <ianjackson@g3ohx.demon.co.uk>
Message-ID: <p4dazFAhtLt3Ewa$@g3ohx.demon.co.uk>
Source record: 101423

Yes.

"25kHz radios" have a channel spacing of 25kHz. "12.5kHz radios" have (guess what) a channel spacing of 12.5kHz (ie you can get twice the number of channels in a given slice of spectrum). This means that the selectivity of the receiver must be twice as sharp as for a 25kHz radio. Also, a 12.5kHz transmitter must use half the FM frequency deviation as for a 25kHz system (this gives half the audio output, which, to some extent, can be made up for circuit design, eg by more audio gain).

The normal FM frequency deviation for 25kHz is +/- 5kHz. For 12.5kHz it should be 2.5kHz, but they seem be pushing it to +/-3kHz. CB radio, with its 10kHz channel spacing, it is 2.5kHz dev.

In the 25kHz world, a 12.5kHz signal will sound somewhat quiet (ie undermodulated) whereas in the 12.5kHz world, a 25kHz signal will definitely sound loud. More seriously, it may also be very distorted during the louder audio passages, because the FM deviation is swinging the signal outside of the receiver bandwidth.

In short, a receiver designed for 12.5kHz will probably be OK provided that the frequency deviation of any strong, received, transmission on an adjacent 25kHz channel is kept down a bit. However, a strong 25kHz transmission will probably splatter over a adjacent 12.5kHz channel.

The moral is (I think) that you can't win 'em all!!!

Ian.

Hi there
I have for sale a Kenwood TS-450SAT in excellent condition. It has a couple of small scratches on the top but the front panel is pristine. Electrical condition is perfect and it puts out full power. It has no filter
installed but can hold three at the same time. I don't have the original box, sorry. Has the auto tuner inside. Comes with:

Power cord
Instruction manual
Programming manual
Desk mike (not Kenwood), never got the hand mike.

Asking $800. U.S. including shipping and insurance.
Cannot ship COD from Quebec to the U.S., sorry.
Can give references of U.S. hams I have dealt with lately.

Inquire by email if interested.

Message-ID: <MPG.121f3643ebb18eb998968f@news.vsnl.net.in>
Source record: 101427

I have a commercial frequency assigned for our company- 161.675 MHZ. I have an amateur radio license also. Can someone suggest which handheld transceiver to buy which will transmit both in the amateur bandwidth and commercial bandwidth.
Also a model which can receive and transmit in the UHF bandwidth also is preferable. I like the Yaesu compact models- please tell me which one to buy.
Can a Yeasu VX-5 be made to transmit in the 148-174 MHZ bandwidth ?
Any help would be most welcome!
Thanks
Vikram

From: eric_fre@hotmail.com
Message-ID: <7p2rt4$1vc$1@nnrp1.deja.com>
Source record: 101431

Ok guys first off there is a VX-5 mailing list at Onelist.com I recomend subscribing to.

Ok all HT get this hot. The difference is the VX-5 keeps the PA within safe operating conditions because of the heat sink case. Other HT use a plastic case which means internal temperature can become seriously high. I would recomend not using external power for extended QSO. Second dont use the soft case while on high power.
One should always use the minimum power required for good signal.

If you have modified the radio then the PA might have been damaged.

Lastly the low battery indicator should not come on and may indicat faulty PA.

There was a translation error in the user manual. the 6m loading coil has to be used for 6m and bellow not for bellow 6m!! This could have damaged your PA.

Regards
Eric.

Audio isn't RF, and the cables don't act like transmission lines
like they do at RF. You can pretty much wire any way you want,
as long as the load impedance is proper for the driving amplifier
(e.g. 8 ohms if that's that the output is rated for.)

Some audiophile freaks will insist that you must use Monster cable
(or something even more esoteric and expensive) for any run over
six inches. Don't believe a word of it. As long as you have a low
ohmage connection and proper shielding against hum pickup, it hardly
matters whether you use RG/8U or cheap brown insulated lamp cord,
since the terminating impedance pretty much tells the whole story.

I vaguely remember Stereo Review addressing this myth of
perfect matching and super-premium cables with some sort of A/B test.

Pristine. Less than one year old. Out of box less than two weeks.
Absolutely as new and without a mark. One-owner/nonsmoker, SN 20m+ (one
of the last made). Includes YK-88SN SSB and YK-88CN CW filters, IC-10
computer chip, and very rare VS-1 voice synthesizer, all installed by
Kenwood-authorized-service.
Also SP-430 matching speaker, manual, original packing. Selling only
because I have used it less than 10 hours. A $1,450 value, will sell
for $650 + shipping. Price firm, no trades. Tks es 73, Jan N0JR

(This is a relisting; prospective buyer backed out because of impending
divorce.
If you contacted me before please do so again.)

My original IC-706 had low SSB output also. It seems that they just do not have a lot of audio drive on SSB. I finally achieved decent SSB power out and audio by 1) running the mic gain at full, 2) using a good amount of compression, and 3) junking the stock mic and replacing it with a SM-6.

Orange County, California?

Heck...you have a Ham Radio Outlet on Euclid Avenue 1/2 mile south of
the 91!

This is a mint, one-owner/nonsmoker AC-4 power supply, with original carton, from a world-class collection of classic American amateur radio gear. The AC-4 is the supply for the TR-series transceivers and the TX-series
transmitters. This one is true collector quality: all original, bright and shiny, ready
to plug in and go.You're not likely to find a better one. $145 + shipping, no trades. Tks es 73, jan N0JR

>
That's a pretty common thing in most areas, I think. I
don't know if they know why, but using a cell does make it
much harder for the average joe to hear what they're talking
about. With a 2way radio, you're only got a couple of
channels to listen to, to hear any particular service. It's
a little tougher if they're trunked, but not much more so.

With a cell phone, even if you know which carrier they're
using, and assuming they're still using analog, you have
something like 400 channels to scan through in most areas.
Even if you have a very fast scanner, it would take a couple
to a few seconds to scan through that, meanwhile you're
missing information. And if you have to stop and listen to
20 other callers for a second, to pick up the right voice,
you're most likely going to miss the whole call, if it's
short.

I know, if you know exactly where the guy is, you can scan
the channels used by the closest cell, but that's easier
than it sounds in most places, as the coverage overlaps.
Cell tower locations are compromises much of the time.

Note that we're assuming "conventional" scanning techniques
here...anything else I could only speculate on. And I'm
sure there are exceptions to the usefullness. I'd be
willing to bet that most calls are short, and are for
exchanges of personal/semi-private information, but I could
see using cells for special tactical work sometimes, that
could be longer, more interesting calls. Where I live, we
don't get that much intrigue.

> However, I understand your concerns. So please ignore my previous request.

No problem, I'm just a little jumpy sometimes.

From: Gordon Brown <freeman@mail.bcpl.lib.md.us>
Message-ID: <9QCt3.270$F4.577821@news.abs.net>
Source record: 101148

I need a tube tester that can handle tubes from old radios (40's & 50's general coverage receivers) to audiophile amps? I see a lot of Hickok's, EICO's,B&K's, Jackson's etc. on Ebay. Which is best and what model's can do the job?

Also need a signal generator for alignments (am/fm/sw), all ages of radios. Any suggestions?

Thanks,
Gordon

Hello 706 Owners..
I have seen numerous notes about issues of low power with 706's. Mine has never had a problem? I run the Mike gain at 6, with no compression, and I get about 90 to 110 watts out. I have also heard people taking out some filter in the HM103..

My suggestiong to the fellow with the observed output problem is the have someone from Icom look at it.

My rig is the most abused... In and out of suitcase's, moved from rental car to rental car etc...

The Icom 706 is a Great Rig..

3534. THE DIFFERENCE BETWEEN THE MC-60 & MC-60A

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-15 00:00:00 UTC
From: rong@computer.net
Message-ID: <37b73475.2459632@news.computer.net>
Source record: 101168

I found the difference between the Kenwood MC-60 & MC-60A microphones. I had an old Kenwood brochure, and it has a small picture and description of both mics. The MC-60 only has 2 buttons--a PTT and a PTT LOCK---no up/down, and no amplifier, and a 4 pin plug at the end of the cable.

The MC-60A has 4 buttons--up, down, and the PTT and PTT LOCK. It also is amplified, and comes with an 8 pin plug at the end of the cable, and a dual impedance switch on the microphone itself.

Evidently though, Kenwood did not change the base casting, as both the MC-60 & MC-60A only have MC-60 cast into them. So, if you have an MC-60 with the up/down buttons, an 8 pin plug at the end, an impedance selector switch on the mic itself, and an amplifier in the base, it's actually an MC-60A.

I have an MC-60A, and it is as described above. The instruction sheet says MC-60A on it, but the base casting only says MC-60. Now we all know what the difference is. If you want to see the actual section of the brochure, you can view it at:

I built one of these and it works fine. Mch better rig
on 2 metres than an older multimode.

Actually, the repeater used by the police around here seems to be rather limited. Nearly all of the calls are limited to a few frequencies in the lower part of the cellular band. So it does not seem too difficult to locate the call.

I've been using a friend's scanner (sadly he wants it back), and so far I have been able to locate the calls quickly enough.

However, I don't want to break the law, so I'll dig around for an older scanner that includes cellular. Of course, as Gary said, using it to simply listen into cellular calls may be illegal, so I will make especially sure not to do that.

Ugh, I really have been out of it lately. I heard about the
Electronic Communications Privacy Act, but was not aware that it was
that restrictive. All I heard was that new scanners could not include cellular.

How would anyone know that a person is listening into cellular calls?
In other words, how does one enforce such a law. Who is responsible for enforcement?

All these are rhetorical questions (no reply needed) - I can probably
find the answers somewhere on the internet.

Bought an IC-746 about 6 weeks ago. Looked at the Yaesu FT-920, IC-765, IC-756, and had a TS-940s that I was replacing. IMHO the IC-746 is one of the best buys on the market due to it's design, predicted reliability and support.

The design uses quad conversion (high IF, 9MHz, 455KHz, and 17KHz), and the dual passband tuning is pretty powerfull for SSB, as is the audio peak filter for CW. The 100watts on 2 meters with full PL has more value for my operating habits than the more expensive 756 with it's band scope. Reviewing the schematic, I noticed that most of the controls go right into the microprocessor. Haven't bought the RS-746 software, but I assume that most of the radio's controls will be remotely controllable.

Date: 1999-08-15 00:00:00 UTC
From: mikrounit@hughes.net
Message-ID: <37b63dc0.18277485@news.hughes.net>
Source record: 101258

Hello,

I have for sale or trade a Kenwood TR-9000 2 Meter USB/FM/CW/LSB
Mobile rig.

It works great and is in very good shape!

Dimensions of the radio: 6-1/2" W x 2-1/2" H x 9-1/8" D

Weight: 5.5 lbs

The rig operates from 143.900-148.895 MHz
The rig does have memory channels, 5 of them. This is the one that has
RED easy to read Digital Display.

What is included:

TR-9000 2m USB/FM/CW/LSB Mobile rig
BO-9 Base Unit for this rig (Turns it into a base setup)
Base Microphone
Communication Specialists TE-32 PL Encoder w/box & manual
12 VDC Power Cord
Operating & Service Manual for the rig

I thought that this rig was sold, but I cannot get a hold of the guy
who was suppose to get it. It has been well over a week.
So, this is why I am posting this again. As said above, this includes
the Comm. Spec. TE-32 PL Encoder, so you can use the
repeaters out there. Everything is in working great!
I am asking $275 for all.
If you are interested in it, please E-mail me or call me.

Phone: (661) 272-6949

E-mail: mikrounit@hughes.net

Thanks & 73, Mike Green KQ6MU

Cleaning up the workshop and have some misc. Audio and ham gear
for sale:
The Voice of Music Stereophonic 722 reel to reel tape recorder
-tube. needs new selector switch. $40 plus shipping
TEAC RA40 Stereo recording amplifier plus A4000 tape deck
-needs work. $40 plus shipping
RME Communicator DB-23
-good shape. $10 plus shipping
Hallicrafters Model HT-40 transmitter (tube)
-good shape. $60 plus shipping
EICO Model 625 Tube Tester
- needs work. $20 plus shipping
Sonah Linear Amplifier BR-21 (tube)
-good shape. $40 plus shipping
Realistic Pro 2005 400 ch scanner
- Great shape. Have box and manual. $250 plus shipping
General Electric Signal Generator YGS-3
-good for parts. $15 plus shipping.
Bel 615ST Remote Police Radar Detector
- works great. $200 plus shipping. Have box and manual.

I am open to offers.
email triodeamp@hotmail.com for more info.

>Cheers,
>--Weiyun

You need a tuned antenna with a tap for the feedpoint which presents the radio with 50 ohms (more or less). A standard car whip antenna fed to a tuned LC tank, with the L tapped near the cold end to feed the radio should do nicely. For walking around purposes, a similarly tuned ferrite loopstick out of an old pocket transistor radio will work. Just take the input to the HT from the coupling loop on the ferrite rod that originally fed the AM radio. I'll leave the physical mounting arrangement up to you, but you *can* just epoxy the rod to a SMA connector.

Note in either case you *will* have to tune the antenna, via the paralleled tuning capacitor, as you change from station to station. This is not a broadbanded solution.

There is a way to get a practical broadbanded solution, but it will require an active device. You can use a FET in emitter follower configuration. Connect the gate to the whip, and take the output to the radio between the emitter and ground (across a choke or low value resistor). You'll need a battery to power this. A lithium button cell, such as a 2036, should suffice, and last for several months if you bias the FET lightly.

I've actually tried the ferrite loopstick (and tuning capacitor) setup on my VX-5R. The results are about the same as you'd get with a $6 pocket transistor radio. In other words, it works Ok, but you might as well use the $6 AM radio from which you looted the loopstick and tuning capacitor instead.

You can relax. This is no "sting." Selling a new scanner with unlocked cellular is illegal. However, as far as I know, owning a scanner with the ability to receive cellular is not. Listening into cellular calls is also not illegal, but repeating what you hear is.

I do not _intend_ to listen in on private phone calls. Our local police department is using unscrambled cellular phones for some communications and I want to be able to follow them to 800MHz when they request phone communications between units. But, perhaps an older scanner with cellular would handle this just fine.

However, I understand your concerns. So please ignore my previous request.

Hi to all @ these newsgroups world-wide.
I am thinking about purchasing a Kenwood THD7 dual band handheld and i want a few opinions from people who have them so i know if i`m making a good choice or not ? What i want to know is how well does it perform from a packet point of view and is the receiver prone to breakthrough from radio pagers on VHF ? Let me know any good points or bad points you know about it and this will decide if i will buy one or not depending on the result of this message. If you know any weblinks to sites which have done honest reviews of this rig let me know.

Please reply to me privately and not to the newsgroup.

73 from John MI0AAZ in Coleraine, Northern Ireland.

I have a Peet Ultimeter 2000. The display unit started malfunctioning
(some of the LCD segments would get dim, or not activated at all). I
sent the display back to them and in less than a week, I had a brand new
display unit.

I would recommend e-mailing them. Chances are likely, you will get Mr. Peet himself and not a customer rep. He might be inclinded to handle things differently.

FWIW, when I ordered my unit, the person who took my order wrote down what I wanted. An hour later, she called back and said she was packing my order and found they were out of a particular length of cable and would the next longer length be OK. I had the entire system in 2 days.

Andy

That *used* to be true. The Communications Act of 1934 said
you could listen, but you couldn't divulge what you heard to a
third party. But the Electronic Communications Privacy Act
of 1996 changed that. Now the mere act of listening to cellular
is illegal.

3573. Re: Bad FT-100 Yaesu (Good TenTec & Drake!)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-15 00:00:00 UTC
From: Will White <wcw@uswest.net>
Message-ID: <37B64E5E.E8F5656@uswest.net>
Source record: 101271

You know, if somehow the people at Ten Tec and Drake saw it economically feasible to get back into ham radio, especially VHF FM, full bore, then I think the problem would be solved. Would I pay $100 *more* for a built and basic Ten Tec or Drake 2-meter mobile, and without the acronym jungle of KenYaeCom bells and whistles? $350-375 for the TT or Drake vs. $250-275 for the KenYaeCom? You bet I would!

I have a Drake TR-4, a B-line, a 2B/BQ, a SW-2, and am eyeing the 2M base; I have a TT Scout, a Century 21, a regen SWL kit radio, the 20-->6 transverter built unit, and several accessory kits. I have had few problems with any of them. Even when it is my fault and I admit it, like when I lost some parts to the TT wattmeter, broke a three band-module levers (hamfists on me) on the Scout, TT sent the replacements free, and they arrived 2nd-Day delivery, also free, both times. Hell, I have called Drake and spoken with Bill Frost half a dozen times about *all* my Drakes, gotten tech support, all sorts of tips, including advice on mods, even to the SW-2, and some *parts* for the TR-4 (ca. 1965!). Try that with the Japanese makers and their current models.

But still, I have had fewer problems, and quicker and fuller resolution, with Ten Tec and Drake, than with the half-dozen or so pieces of Japanese gear I have owned. All of them had glitches. In all cases (remember the Yaesu FT-50R original model power button? The one that stuck out so far the HT came on when your arm brushed against it lightly?) the solution took over six weeks, and was not always resolved entirely.

Add to the manufacturers sluggishness and poor customer relations the outrageous policy of the big stores to dump defective goods on their customers, and that "extra" $100 (even $500: I'll take an Omni VI+ over an IC-756 or FT-920/847 in a dark alley) or so for a comparable Ten Tec or Drake is really more the bargain. You get what you pay for, and if we continue to be such dickerers over $10 or $20 on a >$500 radio, we can expect to see the situation remain as shoddy as it is. I won't buy another *new* Japanese radio, not ever. We are starting to resemble audiophiles and home-entertainment super-center freaks in our willingness to sacrifice quality, basic functionality, and reliability for the sake of a few bucks and some cool looking design with some arcane functions almost no one uses after the first few weeks of owning the box.

Message-ID: <37b6a572.6821685@news.zip.com.au>
Source record: 101272

Hi

I don't know if anyone can help but my 2 year old IC706 has suddenly lost virtually all power on sideband transmit, which I assume is an audio problem - mike gain is still set at almost full. Everthing else seems to work, including full CW power.

Does anyone know if this is a known problem and what it might be or is it a return to ICOM matter?

Thanks

Source record: 101273

Tracy,

Get a can of DeOxit (order from Antique Electronic Supply, www.tubesandmore.com, TechAmerica, www.techam.com, or straight from Caig Labs) and clean the switches, pots, and contacts. Check the S0-239 connector on the TR-4, and just for good measure, shoot that with DeOxit too. Check the voltages on the AC-4. Look for tubes with open filaments (not lit up). Wiggle all the tubes in their sockets. Shoot a little DeOxit into the sockets. It is common and no biggie to have a bad tube. It's an old radio and this one has been sitting for awhile. I retubed my TR-4, less finals, for about $30 using US NOS tubes.

Does the RF tune control have a noise peak, with the antenna disconnected, at some point on all bands? If not, the rig needs an alignment. I haven't looked at my TR-4 manual lately, but I believe all you need for an alignment is a set of plastic alignment tools ($5 at tech america), a good VOM, a freq. counter or general coverage receiver w/digit. display, and maybe an RF signal generator. If you follow the instructions in the manual and take care around the HV, it isn't terribly difficult.

How do you have the antenna connected? My HQ-129 has screw-type antenna terminals. If you are just sticking a wire into the center part of the SO-239, maybe you aren't making good contact. Get a PL-259 (the male counterpart) and wire a piece of coas to it, then the antenna wire to the center conductor, and the shield to some sort of ground.

Hope it helps, at least start you on the path of eliminating what isn't wrong. It's a terrific radio, and you *will* get it back up and running. Then you will know why so many hams are nuts about Drake. Good luck!

New standard for FCC authorization is one of several measures to deter cellular interception. If the FCC goofs on its authorization, there is only one truth: you can or cannot hear the cellular. Sell, buy or use of the alinco scanner (the act does not say knowingly or not) is still illegal, if it does receive cellular.

At the TenTec web site, I notice they're coming out with a new
all-mode rig for 6 & 2 meters... and, of course, for some time, Drake
has been selling a 2-meter FM base station rig... slim pickings,
admittedly, but it's good to see at least something there, from usa
makers...

Will,
You forgot the two most common failures of TR4's (one of which turned out to be Tracy's problem). Always check the #12 bulb used as a fuse for the receiver, located in the final compartment (taking proper precautions with high voltages in that comparement) or under the chassis in some and one should always check the slide switch on the side that allows the use of a separate receiver. When this sits in one position for 30 odd years, the switch becomes intermittent. All your other suggestions are good ones, but thought future TR4 owners might need the above.

>"Sell, buy or use of
>the alinco scanner (the act does not say knowingly or not) is still
>illegal, if it does receive cellular.
>Ken".....
We are an Alinco Authorized dealer, and after speaking with Alinco I can
assure you that only the Europe/Canada version of the radio (DJ-X10K) is
illegal to sell in the US. Alinco had to specially make the "T" version in
order to get the fcc approval to sell it here, & untill Alinco is notified that
the type acceptance is withdrawn(which they are not excpecting) , all alinco
dealers coast to coast can & do continue to legally sell the X10T. Alinco
assured me they are in constant touch w/the fcc for radio approvals ect, and
could never legally distribute & advertize an illegal product.

3586. Radio Gear FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-15 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <37B6D173.8A4B2521@dirtball.com>
Source record: 101284

I have three peices of radio gear for sale.

1) Yeasu FT 2400 50 watt 2-meter moblie $150.00 you pay shipping and insurance. This is a good little 2-meter rig apperance wise its a 7 on a

scale of 1 to 10. It comes with a keypad mic. Drope me a line if you are

interested.

2) A Kenwood TS 120 moblie HF rig. This rig is a very simple HF rig. It covers the convental HAM bands 80 thru 10. It does about 70 watts out and is a again a 7 on a scale of 1 to 10. I'm asking $300.00 for the radio mic and power cord.You pay for the shipping and the insurance.

3) Dentron Clipperton L HF amplifier. I have $550.00 in the amp, with all the work I have invested in this amp that is what I have in it. But in all farness the amp isn't worth what I have in it so my asking price is $400.00. You pay shipping and insurance. This amp has been redone inside. I replaced the caps last year. It now ask 220uF caps in the power supply in stead of the 100uF and it also has new 1N4007 diodes too. The band switch is also new. The 572bs have very low use. I put new

572bs in the amp back in Feburay. I think I have fired it up 3 times since then. This amp is my back up. I run a SB 220 and I have another amp coming from Maryland for a back up amp. Its a pair of 813s built in the 1960s by my grandpa. Fullwave bridge powersupply the whole nine yards. So I don't need the Clipperton L any more.

I'm looking to get another HF rig. My TS 930 power supply crapped on me.

I have ordered a new Power supply board for the rig and I just put a new

PLL board in the rig. I really will not know what the damage is until I get the new power supply board installed.
I will also listen to any trades that anyone might have to offer for all of the equipment above. Heck I'll swap it all for another WORKING TS-930S/AT with the AM filter or TS-940S/AT with the AM filter.
I also have the Narrow CW filter that I would trade for the 6 KHZ AM filter that goes in the TS-930S/AT.
Thanks for reading and 73 from Oris

Reverse your transmit and receive data leads. The docs in the manual are misleading.

FWIW, Old dead mice have excellent cables attached (usually)

Hi there,

What is most likely wrong is that you have lines 2-3 reversed.
The Kenwood manual is not very clear on this. A very quick way to
check this is to use a nullmodem adapter with your cable and try to
connect with the radio. I believe you will find that this will solve
the problem. I am using the software with no problems in fact find
it easier to use than the ADMS stuff for the Yaesus since you
do not have to make a template. If you need further help please
write and I will try to help you.

Some people look for crap because that's all they know.

I know of more than just a few people who have turned the Uniden
chassis TRC-457 (and other similar rigs) into some impressive
and quite good performing 10M rigs.

But then, just maybe they knew what they were doing...

Repeater is in good shape and works well,it consists of the following.

2 ea Yaesu FT912R transceivers.
1 ea Sinclair 4 cavity pass/reject duplexer.
1 ea 1 watt in for 20 watts out power amp.
1 ea ACC RC-850 controller (ver 3.6 with rack mount,front display
panel,autopatch,computer interface and etc).
All cabeling to interface controller with radios.
All you have to do is apply 12 vdc,add coax and antenna and you are on
the air.
Package is $1700.
Will sell without controller for $1000.
Will not break down further,could even do some tradeing.
Thanks Al

You are correct. Analog cellular is easy to listen to. Digital cellular (CDMA and TDMA) sound like noise on the common cellular capable receiver.

Analog cellular is on its way out, though will probably be around in some markets for few more years.

The whole cellular industry is moving towards digital -- third generation wireless has chosen CDMA as the modulation of choice -- making it nearly impossible to monitor.

Those who have the older receivers that can currently monitor analog cellular transmissions -- make the most of it. Your time is running out.

Appearance is 9.5, a couple of small scratches on the top.
Electrical is a 10, puts out full power.
Has no additional filter installed, can hold 3 at a time.
Comes with a Midland desk microphone, instruction and programming
manuals plus power cable. I never got the box or hand mike.

Asking $700. U.S plus some help with shipping.
Cannot send COD from Canada to the U.S., sorry.
Can give U.S. hams as character reference.
Have done this before, no problem in shipping to the U.S.
Inquire by email if interested.

A manufacturer would not admit that anything they're selling could ever
be illegal, or they'd put the responsibility to FCC.
Anyway don't get me wrong. Alinco makes great products like DR-610T and
DJ-G1T, and these are legal to sell and buy.

Does anyone have any comments, either good or bad,
about the MFJ-969 160-6M 300W Roller Inductor Tuner?

Interested in purchasing one soon.

Adam Maurer VK3ALM/4

Hi All,
I am looking for any information regarding this
radio, reviews, opinions, comparisons with other
radios, hints tips, what is the difference
between the SDX and the S/SD ?
I want to know as much as possible before I spend
wads of cash.
Many thanks,
Gary - G7TOK

3636. Amateur Gear FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-16 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <37B7FC87.AD864C8@dirtball.com>
Source record: 101201

I have three peices of radio gear for sale.

1) Yeasu FT 2400 50 watt 2-meter moblie $150.00 you pay shipping and insurance. This is a good little 2-meter rig apperance wise its a 7 on a

scale of 1 to 10. It comes with a keypad mic. Drope me a line if you are

interested.

2) A Kenwood TS 120 moblie HF rig. This rig is a very simple HF rig. It covers the convental HAM bands 80 thru 10. It does about 70 watts out and is a again a 7 on a scale of 1 to 10. I'm asking $300.00 for the radio mic and power cord.You pay for the shipping and the insurance.

3) Dentron Clipperton L HF amplifier. I have $550.00 in the amp, with all the work I have invested in this amp that is what I have in it. But in all farness the amp isn't worth what I have in it so my asking price is $400.00. You pay shipping and insurance. This amp has been redone inside. I replaced the caps last year. It now ask 220uF caps in the power supply in stead of the 100uF and it also has new 1N4007 diodes too. The band switch is also new. The 572bs have very low use. I put new

572bs in the amp back in Feburay. I think I have fired it up 3 times since then. This amp is my back up. I run a SB 220 and I have another amp coming from Maryland for a back up amp. Its a pair of 813s built in the 1960s by my grandpa. Fullwave bridge powersupply the whole nine yards. So I don't need the Clipperton L any more.

I'm looking to get another HF rig. My TS 930 power supply crapped on me.

I have ordered a new Power supply board for the rig and I just put a new

PLL board in the rig. I really will not know what the damage is until I get the new power supply board installed.
I will also listen to any trades that anyone might have to offer for all of the equipment above. Heck I'll swap it all for another WORKING TS-930S/AT with the AM filter or TS-940S/AT with the AM filter.
I also have the Narrow CW filter that I would trade for the 6 KHZ AM filter that goes in the TS-930S/AT.
Thanks for reading and 73 from Oris

I would like to know what the Amateur "bandwidth" is.

Anyhow..... a Ham radio is not "Type accepted" for commerical use.
Other than that consideration the ADI 600 should do nicely.

Looking for prices on available rigs. Don't want anything really
huge!! Something around the size of an old CB radio would be
acceptable.. Maybe 2.5" tall, 8" wide, etc... Must be capable of 5
bands HF.. Tuner built in would be nice but, not absolutely required..

I need as much info as you can provide.. Pictures would be nice too..

> Ultimeter anemometer. Peet will not sell repair parts for this.

From William J. Peet II:

"The warranty is 1 year from date of purchase.

"If an anemometer is hit by flying debris or hale from a storm or high wind condition, it is not really a warranty problem.

"If any one calls with this type of problem we send out replacement cups free of charge. If the tabs are broken on the rotor, replacement with cups is only $20.00 and we also offer a recondition anemometers for $59.00 for replacement.

"I think that is about as much as one could ask in a non-warranty environment."

Shack, ADI
> or Alinco. It's the same when I buy a computer,

Man that is really unfair. I can't speak for any of the other companies, but we at ADI have actually found that, in most cases, it is less expensive and easier to replace a defective radio with a new or remanufactured one that to actually invest the money to repair it. It just doesn't make sense to spend $75 per hour on a tech to troubleshoot a 10 cent capacitor gone bad. Let alone the investment in test equipment.

That policy has given us, without a doubt, the fastest turn around time on defective products of any company in the business, usually 3-4 days. And, yes, we are able to offer remanufactured radios because of this policy.

Now as far as whether the big three have a lower rate of defective radios than ADI...? No one publishes those statistics, so who really knows? We have a very low rate of returned products, that I believe to be comparable to the industry average. The fact is that ADI is one of only two factories (us and Kenwood) to have an ISO quality control rating. ISO is a very strict process that aims at producing a 0% out of the box defective rate. While no company can every reach that ideal, we actually do come pretty close.

>
> How would anyone know that a person is listening into cellular calls?

There are a couple of ways, catch them in the act, or find that they've
disclosed or acted on information they could only have gotten by listening
to cellular.

The latter was the case in Florida, when a couple released a tape of
a political conference call, where the participant in Florida was
using a cellphone. There have been a number of other cases, mostly
also political spying, which have gotten people in trouble. The couple
in Florida were only fined, but jail time has been handed out in other
cases. One such case, brought before a Federal grand jury here in
Georgia, wound up with the perp serving 24 months in federal prison.

>Who is responsible for enforcement?

I'm not sure who the lead agency is for enforcement,
but in the case mentioned above it was the FBI. Listening
to cellular is now in the same category as wiretapping.
The FBI usually is the agency which pursues such cases.

Since you never had a new TRC-485 but received one 'in trade' it is not fair to judge it so harshly. No one knows what the first owner(s) did to the radio. As I said my pair of HTX-212's still work like new (and I bought them new) after nearly 5 years. Also there are many HTX-100's still on the air today . That unit has a great reputation. Obviously you got a lemon handed down from who knows how many owners . Therefore your 'review' is severely flawed.

Hello,

I have a Kenwood TR-9000 2 Meter FM/USB/CW/LSB mobile
transceiver for sale or trade.
It is in really good shape physically, and works great!

This rig comes with:

Communications Specialists TE-32 PL Encoder (For repeater Access) &
box, and manual
Base Microphone
BO-9 Base Unit (Turn the mobile into a base setup)
12 VDC Power Cord
Operating Manual
Service Manual

I am asking $275 OBO or TRADE.
If you are interested in it, please call me or E-mail me.

Phone: (661) 272-6949

E-mail: mikrounit@hughes.net

Thanks & 73,

Mike Green KQ6MU
DM04 Palmdale, CA

Whoa. All ISO certification says is that you have a process which
is documented to a specific standard. It doesn't say anything about
whether the process is good or bad. You could have a reject rate of
100% and still be ISO certified as long as the documentation
accurately describes the process used to manufacture the item.

The Alinco receiver is probably picking up an "image" of the cellular telephone transmission. This is an artifact of the way the receiver is designed. All superhetrodyne receivers (99% of the currently manufactured receivers) have these images, though more expensive receivers have them to a much lesser degree.

The federal ban on receivers is a joke, anyway. First Congress made it illegal to listen to cellular telephone conversations, as if an FBI agent was going to jump out of the closet whenever someone tuned their receiver within the 800MHz band. (Many TV receivers in circulation at the time would tune in cellular telephone transmissions.) When this obviously didn't work (as opponents said it wouldn't), Congress halted sales of all cellular-capable receivers. All this is obviously a payoff to the cellular telephone industry who wanted to lie to their customers with a straight face and claim their phones are secure. Real security would have required reengineering their phones and would have cut into their profit margins, so they spent the money on politicians and lobbies instead. The hypocritical handling of the Democratic party activists who taped Newt Gingrich's cell phone conversation (contrasted with the prosecution of Linda Tripp) shows how much of a joke it all is.

I'm looking in an old Radio Shack catalog -- about 4 or 5 yrs old --
and I notice that TRC-??? radios sell in the price range of maybe $70
to $150. While HTX-??? radios sell at prices like $269 or $299. Could
be, you get what you pay for, and at $150 or less, one should not
expect a whole lot, unless maybe it is CB and expectations for that
class of radio would be very modest.

No Bob I don't think so. The relative difference in price between CB equipment and Amateur equipment has to do with the complexity of the unit and the age-old law of " supply and demand '. Don't you think RS sells a ton more CB's then they do 2M rigs? Of course they do so they can be priced lower..also a CB is less complex then a 2M rig. Those are the reasons.

From: Oris <oris@dirtball.com>
Message-ID: <37B86028.9E597437@dirtball.com>
Source record: 101229

I have a sick TS 930 that I would like to sell. It has wide and narrow CW filters. It also has the new PIXX digital PLL board and a new powersupply X43 1430 00 from Pacific coast parts. the rig has 117 volt fans on the back of the power supply and on the back of the PA. The rig will not power up. It also has new power transistors. I can't find the problem.
It all started when L3 shorted against the cabnet of the rig. I burnt 33 ohm resistor that was in seires with L13 and L3. The power transfomer

and the rectifier are producing the 40 volts needed. but that is where is stops. I am lost!. I have over $400.00 in the rig in new parts and still can't find the problem. So if you think that your a good tech (better one than me time in this rig is killing me) then its the rig for

you. On a scale of 1 to 10 I would say the rig is a 6. It has a small scaches on the top corner of the face of the rig and it has those big 117 volt radio shack fans on the back. I will also throwin service manual and owners manaul. Like I said I have over 400 bucks in the rig. So if one of you send me 425.00 I'll send it to you shipping included. Its worth that in parts. It does also have the automatic antenna tunner.

Actually, you're arguing semantics. ISO is meant to show that we use a
standardized manufacturing process that includes adequate quality
control and inspection along the way. While it doesn't DIRECTLY
guarantee that we won't prouce a defective product, it does certify
that we enough quality control along the way to weed out most of the
problems. ISO itself has this to say on their website:

" . . . ISO 9000 concern[s] the way an organization goes about its
work, and not directly the result of this work. In other words, they
both concern processes, and not products at least, not directly.
Nevertheless, the way in which the organization manages its processes
is obviously going to affect its final product. In the case of ISO
9000, it is going to affect whether or not everything has been done to
ensure that the product meets the customer s requirements."

In other words, you're partially right, ISO doesn't DIRECTLY guarantee
that our manufacturing process is a good one. However, it is much more
likely that a company will produce a defect free product when operating
under ISO than without any standard. Otherwise, ISO-900x wouldn't be
so widely accepted. Because of the additional inspection and quality
control required by ISO you can be darn well certain that our
manufacturing process is indeed a good one, at least as good as any of
the other two-way companies making ham gear.

i have had bad luck with MFJ. The quaility control is terrible. However, you may have a different opinion. I have a sure way to protect yourself. Purchase the Tuner direct from MFJ and you have 30 days NO QUESTIONS ASKED RETURN POLICY.
You pay a bit more than from a Dealer but it is worth it. If you like it then keep it and you paid $15 more than from say HRO.
If you think it is junk etc. then send it back for a refund. I found the refund takes a few months to get you $$ back (Slow).
good luck though, TIM

Source record: 101234

it is a decnt deal for a guy who wants either a entry level HF radio or a
mobile one. The only down side of this radio is the
CTCSS tones have to be changed by means of a dipswitch underneith the radio. 6
mtrs is 10 watts not 100. The built in
CW filter is terrible and is the Narrow SSB is a total joke. However, if you
are looking for a basic 100 watts SSB radio this is the best deal around.
Alinco is closing out the radio and keeping the DX-70TH (100 watts
on 6 mtr) version plus the DX-77T table top model. Oh yes. The smallest tunning
steps on the DX-70T are 20 HZ. Most radios have 10 HZ or less. These means it
is Choppy tunning and not like a analogue radio.

My MFJ 989C seems well made and as-advertised. No problemma.

The instructions that came with it are awfully skimpy, tho', on how to
best utilize the tuner with antennas -- that is, how to twist those 2
capacitor knobs and the inductor knob to get the lowest swr. Tricky to
tune, basically.

But it's well-screwed together, and the cross-needle meter is great to
work with.

Well Mr. Charles T Johnston,
You sure assume a lot, and quick to pass on you opinions on all RS radios.

No the TRC-485 worked when I received it, and there was only one owner.
I also have a HTX-100 that works fine. I also had a TRC-457, TRC-458, and a
TRC-453
and they were very dependable radios, and all converted to 10 meters by
myself.
Without seeing and using the radio how can you say
"Therefore your 'review' is severely flawed"?
I have been in the radio field for over 30 years. I do not proclaim other
than what I know for
facts....
You may want to check my spelling again and let me know if all is
well....Have a nice day.

Fuzzy

Hello,

As many of you know, Radio Shack will be bringing out their new
catalog in about two weeks. Many stores have advance copies on hand and
I had a chance to look at it.
In addition to their two meter mini handheld they have a 440
version of it. They also will be bringing out a "new" 10 meter moble
caled the HTX-10. Sort of a revised TRC 485 a CB am / SSB moble. The
HTX-10 has, from what I could make out in the picture and what the
paragraph read is as follows, High and low power, AM and FM, repeater
splits, clairifier (tune) has a second use and that is push to activate
as a function. This activates second level menu on the six buttons below
the display. I could not make out the words on the picture but must be
repeater, scan and other functions. The primary use is mode, NB, band.
The display seems to be changed slightly to make use of these
new functions like low power and repeater. The radio is small about 1.5
x 6.0 x 7.5 inches. The knobs are backlit in a yellow or amber color.
Power out is 5 and 25 watts and this may indicate a heatsink on the back
panel, at 25 watts it should. No CW is indicated at all so is a loss to
some. :(
All in all a good value for amateur use at about 149 dollars.
There are similair rigs out there that must have a common source. The
Eagle Sidewinder 400 and it's clone the Roadforce. Neither have repeater
splits. The new Eagle Spitfire 454 is a handheld 10 meter and it does
have repeater functions. All these radios must come from a common place
as they look alike and have simillair functions.
Many other new items in the "Shacks" catalog. Like marine
radios, business band rigs, new scanners and some new shortwave
receivers. Also lots of new kits and many new parts. A big catalog but
$2.95!

Passing this along... D.S.

(Concerning the case of the Kirby fellow from Florida
that's been ripping people off)

The following message was received from Robert Luther,
the detective from Panama City, Florida handling the Kirby case:

"Please ask the people to whom you are talking to
provide me with a phone number so I can call and talk to them.
If you have any names or numbers please list them and
I will make contact.

If you can find out or tell me if any of the deals
were made over the radio or computer, such as,
did Mr. Kirby solicit any of the crimes committed
over the internet or by ham radio ?
If he did I need to know the call sign and or e-mail name used.

I have been in touch with the postal inspector and
they will start a case and work with me on this.
Once I have all of the original
mail that was sent I anticipate making
a quick arrest for the fraud.

Thanks, Robert Luther

From: N9IVO <steam@megsinet.net>
Message-ID: <sHzu3.977$PY.80190@news.corecomm.net>
Source record: 100860

I have two of these little jewels. The quality of the radios is great. Battery life is extremely long.

I use them primarily to cross-band to my dual-band radio which then transmits with 50 watts on a Diamond 500 antenna on 2 meter fm simplex. For this, I have the Alinco on low power.

In this capacity, I get three days usage out of the 800 milliamp nicads before they need a recharge.

The radio can be charged through the dc jack on the top of the ht. That way the batteries never have to be removed from the radio.

Using the ht's on simplex ht to ht, I get around 3/4 of a mile on high power.

Pretty limited with only 1/3 of a watt, but they serve my purpose perfectly.

I wouldn't recommend them for general use to hit repeaters and such, as the low power and pseudo-antenna just doesn't get it.

I've been watching this for a while, and yeah, I did make a smart comment, but I think it's time for this...

I really think the Cell industry WANTED the phones to be 'overheard'. I think they wanted to move piece by piece to new technology. Can you say 'upgrades'???

But enough. A number of years ago a friend (yes, I have a few) called me and started to tell me something VERY confidential.

(If you've seen this before, sorry. No, change that, TOUGH!)

STOP!! I asked if he was on a cell phone. He said yes, but the company told him it was secure. Well, I chuckled and we got into a heated discussion. (Ok, an arguement) It ended up with trying to figure out a way to prove it.

So I asked for listeners, if any, to call his office number (with phone mail) and leave a message that they heard us. The bet was for a 6-pack of Sam Adams. (It had to be a serious bet!) He announced his office number.

Anyway, he said he'd better call the office and make sure his voice mail was clear (with a snigger) just in case it flooded his system,

He hung up and didn't call back. And didn't call back. And didn't call back... Finally he called. First thing out of his mouth was "MY OFFICE PHONE WAS BUSY!!!" Turned out so many people were calling he couldn't get through!

The Sam Adams tasted sweet.

Mike

<snip>

I took the liberty of examining one of these units, and the included documentation, at John's booth at the Bay Area's Foothill swap meet back in July.

Although I can see that the boards are clearly useful for some applications, be aware that they do NOT put out NMEA-compliant data bursts. The output format is most definitely proprietary (though it is thoroughly documented in the links referenced on John's web page).

In any case, this means that the receivers cannot be directly used with some popular mapping software packages, such as Chicago Map's 'Precision' CD, or with DeLorme's Street Atlas, that expect NMEA-compliant data streams. I suppose it's possible to construct some sort of format converter if one wanted to go to all the effort.

Caveat GPS...

I think there are several reasons for the ban. The idiots
reason is to protect privacy - as has already been
discussed, it currently doesn't. The 'real reason' is the
one mentioned above, and probably what about 20% of the
morons in our government had in mind when they passed it.

But where's the evil? It's been my observation that
government is a combination of misinformed do-gooders and
greedy self serving bastards fighting each other, with a
very small sprinkling of highly intelligent amoral people in
the background pulling the strings.

The bill is a joke for analog - we all know that. But what
the bill does is effectively crush commercial development of
products designed to pick up digital cell phones. There's
no financial incentive to build a radio to pick up those
bands. This is part one.

Part two is that for some reason, or so I've been led to
believe, the encoding method used for digital cellular is
weak. Strong enough to technically be encryption, and to
keep out a typical hobbyist, but not so much as to prevent
real time decoding, given the right hardware. Why?
Probably economic. But a predictable, maybe even
'steerable' decision

What that leaves is a situation where, after analog is
phased out, the feds can listen to any cell call they want,
and nobody else can, or may even believe it's possible to.

The sad part is that even if they believed this was the
intent, many people would feel to see the evil in this.
"It's for the public good."

A stretch? Then why did the feds go after the guy that
built kit for the gizmo to demodulate digital police calls,
and why did this send dozens of web site owners into a tail
spin, pulling information off their pages.

This would add to their technology base. Tapping land line
phones, for example, requires access to telco equipment,
which at the very least is apparent to the telco people.
Monitoring which numbers call which other numbers - traffic
analysis, if you will - isn't, with the right hooks. And
traffic analysis isn't protected as private, the last I
heard. The cell phone tap, which of course can't be
monitored, gives them a voice to the web of these otherwise
voiceless numbers.

Nah, couldn't happen. Our people aren't that diabolical.
:)

I don't mean to be anti-government, by any means. I believe
that, as they say, death and government are both necessary
evils, and I further believe that we have possibly the best
form of government yet devised. Yet, like death, it is
still a terrible, horrible thing to bear, and like death, it
will always seek out the weakest, most vulnerable parts of
us to destroy. We have a kinder, gentler plague.

Cheers.

Every commercial radio-telegraph shore station did in fact conduct
broadcasts, including weather and traffic lists. (See the FCC's
definition of "broadcast" -- I believe Part 1 or Part 2 contains
all telecommunication definitions.)

3704. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7pb5js$gu2$1@news.hawaii.edu>
Source record: 101042
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Appearance is 9.5, a couple of small scratches on the top.
Electrical is a 10, puts out full power.
Has no additional filter installed, can hold 3 at a time.
Comes with a Midland desk microphone, instruction and programming
manuals plus power cable. I never got the box or hand mike.

Asking $700. U.S plus some help with shipping.
Cannot send COD from Canada to the U.S., sorry.
Can give U.S. hams as character reference.
Have done this before, no problem in shipping to the U.S.
Inquire by email if interested.

Hi there... I'm an electronic musician seriously searching for electronic musical equipment from the 1960's-80's, in any condition, BROKEN OK:

- SYNTHESIZERS
- KEYBOARDS
- DRUM MACHINES
- VOCODERS
- EFFECTS PROCESSORS
- ANALOG SEQUENCERS
- ANALOG MODULAR SYNTHS (full systems or component modules)
- MIDI GEAR

Dials or slider controls preferred but not required. The older and more unusual, the better.

Moog, ARP, Roland, Sequential Circuits, Oberheim, Korg, Roland, EML, EMS, Buchla, PPG, Aries, Steiner-Parker, Tonus, Ionic, SMS, Maplin, Yamaha, Simmons, Voyetra, Octave-Plateau, Bode, Polyfusion, Serge, Delta, Emu, Sennheiser, Mutron, Maestro, ElectroHarmonix, Electronic Music Laboratories, Electronic Music Studios, ANYTHING SIMILAR.

I'm also looking for older literature on old synthesizers and electronic music: periodicals, books, product brochures, etc.

Please email me at rolandman1@aol.com if you've got anything you'd consider selling or know someone who could. Please be sure to include price and condition. Thank you in advance and sorry if this message annoys anyone.

Steiner Synthacon
ARP Sequencer
Tonus ARP model 2600 Synthesizer
Mutron Biphase dual phaser

hi tracy,
the tr4 are not easy to set up!
i myself have one and my ham radio operator told me that it is "Weard" to operate.
you should have a swr/pwr meter connected between the antenna and the radio if not you may blow the finals ,like i have done.

it is a good radio mine is putting 215 watts full open but i use it at 75-100 and working great.

Digital phones still aren't encrypted, so it is still easy to listen in on them.
You just need a different sort of receiver. If you have a digital cellular
phone, you probably already have what you need. Most of them have a
test mode that allows you to unsquelch them and manually monitor
the channels. This mode is intended for factory test and repair purposes,
but many of them will let you access it with a special keypress combination
on power up. (Most of the older analog phones had this ability too.)

hi
as far as i now the 4 pole jack is manufactured under license from sony
and you cannot buy the plug on its own however you can buy an adaptor
plug from yaesu which converts it two a 3.5 threeway and a 2.5 2way

I have two peices of radio gear for sale.

1) Yeasu FT 2400 50 watt 2-meter moblie $150.00 you pay shipping and insurance. This is a good little 2-meter rig apperance wise its a 7 on a

scale of 1 to 10. It comes with a keypad mic. Drope me a line if you are

interested.

2) A Kenwood TS 120 moblie HF rig. This rig is a very simple HF rig. It covers the convental HAM bands 80 thru 10. It does about 70 watts out and is a again a 7 on a scale of 1 to 10. I'm asking $300.00 for the radio mic and power cord.You pay for the shipping and the insurance.

I DO BELEIVE THAT THIS AMPLIFIER IS SOLD!
3) Dentron Clipperton L HF amplifier. I have $550.00 in the amp, with all the work I have invested in this amp that is what I have in it. But in all farness the amp isn't worth what I have in it so my asking price is $400.00. You pay shipping and insurance. This amp has been redone inside. I replaced the caps last year. It now ask 220uF caps in the power supply in stead of the 100uF and it also has new 1N4007 diodes too. The band switch is also new. The 572bs have very low use. I put new

572bs in the amp back in Feburay. I think I have fired it up 3 times since then. This amp is my back up. I run a SB 220 and I have another amp coming from Maryland for a back up amp. Its a pair of 813s built in the 1960s by my grandpa. Fullwave bridge powersupply the whole nine yards. So I don't need the Clipperton L any more.

Hi folks, one question. Since I upgraded to a new computer and os "Windows 98". I cant seem to get the software for my multimeter to install. The setup program just hangs. RS says "they never heard that before". There are no updated version on their website and I cant find any third party software either. Any one have this problem cept me?

EMAIL IF YOU HAVE ONE.

3721. R.S. PRO-43 Scanner Troubleshooting help

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-17 00:00:00 UTC
From: "Robert G. Schaffrath, N2JTX" <rschaffrath@acm.org>
Message-ID: <37B97649.748D@acm.org>
Source record: 101059
Cross-posted to: rec.radio.amateur.equipment,sci.electronics.repair

I have a RadioShack PRO-43 Scanner which recently stopped receiving signals. Referring to the service manual (I have a JPEG of the relevant section of the schematic at http://www.schaffrath.net/pro43.jpg. It is about 690K. The circuit is question at the top.), I have been able to determine that the problem is with the RF amplifier circuit which consists of transistors Q104 and Q105 as well as other discrete components. I have verified that the receiver works. If I tune the radio the 162.55 MHz and connect a small antenna directly to the collector of Q105, I can hear the NOAA broadcast from New York City with some static. I took the following voltage readings on the transistors (the normal voltages are from the service manual):

Actual Normal
Q104 Base .62V 1.8V
Q104 Emitter .02V 0.5V
Q104 Collector 2.74V 2.2V
Q105 Base 3.34V 3.0V
Q105 Emitter Same as Q104 Collector
Q105 Collector 4.93 4.5V

Here is where it gets interesting, if I place a jumper across capacitor C144 (which is a 100pf unit), the radio comes back to life. Even without an antenna connected I can hear the NOAA station quite clearly which is a good indication that the amplifier has come back to life. Connecting an antenna to the antenna input on the RF board brings in a very clean signal. If I remove the jumper, the signal goes away. Checking the voltage readings with the jumper in place, I get the following values:

Actual Normal
Q104 Base 1.5V 1.8V
Q104 Emitter .88V 0.5V
Q104 Collector 2.39V 2.2V
Q105 Base 1.85V 3.0V
Q105 Emitter Same as Q104 Collector
Q105 Collector 4.75V 4.5V

I suspect that Q105 may be defective since its readings seem to be the most out-of-whack. However, being SMT technology, I do not have the luxury of being able to really poke around extensively by swapping parts. I am looking for a second opinion as to whether my deduction is correct or should I be looking somewhere else.

Robert

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications |
Corp. sells used Plectron receivers, in working condition, |
for $75-100. If you require crystals or reeds, TCS may be |
able to find some types/frequencies. Contact: |

Terry Marengi |
TCS Communications Corp. |
tel. 1-800-TCS-XMIT |
email: TERRYTCS@aol.com |

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

```
:
: <snips>
:
: >The Alinco receiver is probably picking up an "image" of the cellular
: >telephone transmission. This is an artifact of the way the receiver is
: >designed. All superhetrodyne receivers (99% of the currently
: >manufactured receivers) have these images, though more expensive
: >receivers have them to a much lesser degree.
:
: yep
: >
: >The federal ban on receivers is a joke, anyway. First Congress made it
: >illegal to listen to cellular telephone conversations, as if an FBI
: >agent was going to jump out of the closet whenever someone tuned their
: >receiver within the 800MHz band. (Many TV receivers in circulation at
: >the time would tune in cellular telephone transmissions.) When this
: >obviously didn't work (as opponents said it wouldn't), Congress halted
: >sales of all cellular-capable receivers. All this is obviously a payoff
: >to the cellular telephone industry who wanted to lie to their customers
: >with a straight face and claim their phones are secure. Real security
: >would have required reengineering their phones and would have cut into
: >their profit margins, so they spent the money on politicians and lobbies
: >instead. The hypocritical handling of the Democratic party activists
: >who taped Newt Gingrich's cell phone conversation (contrasted with the
: >prosecution of Linda Tripp) shows how much of a joke it all is.
:
: I think there are several reasons for the ban. The idiots
: reason is to protect privacy - as has already been
: discussed, it currently doesn't. The 'real reason' is the
: one mentioned above, and probably what about 20% of the
: morons in our government had in mind when they passed it.
:

The Intel community really doesn't want folks using the
encryption features already built into the phones. It would
make their job harder as they would have to get a court
order to listen.

: But where's the evil? It's been my observation that
: government is a combination of misinformed do-gooders and
: greedy self serving bastards fighting each other, with a
: very small sprinkling of highly intelligent amoral people in
: the background pulling the strings.
:
```

Somewhat close. But don't under estimate how lazy
most in government are. And how all the committees
make it nearly impossible to get anything done.

: The bill is a joke for analog - we all know that. But what
: the bill does is effectively crush commercial development of
: products designed to pick up digital cell phones. There's
: no financial incentive to build a radio to pick up those
: bands. This is part one.
:

Good point. However the newer DSP radios have the
ability to have software modules added to provide newer
forms of demodulation. DSP makes all the old rules go
out the window.

: Part two is that for some reason, or so I've been led to
: believe, the encoding method used for digital cellular is
: weak. Strong enough to technically be encryption, and to
: keep out a typical hobbyist, but not so much as to prevent
: real time decoding, given the right hardware. Why?
: Probably economic. But a predictable, maybe even
: 'steerable' decision
:

The new Optoelectronics interfaces have the data splitters
built in.

: What that leaves is a situation where, after analog is
: phased out, the feds can listen to any cell call they want,
: and nobody else can, or may even believe it's possible to.
:
: The sad part is that even if they believed this was the
: intent, many people would feel to see the evil in this.
: "It's for the public good."
:

It is always a battle between those in power and
the people. Always will be. A very good reason
to work for the government at some point in your
life. It helps to have insider experience. And another
reason why we should have the Draft back.

: A stretch? Then why did the feds go after the guy that
: built kit for the gizmo to demodulate digital police calls,
: and why did this send dozens of web site owners into a tail
: spin, pulling information off their pages.
:

Data splitters are now part of Optoelectronics scanner
interfaces.

: This would add to their technology base. Tapping land line
: phones, for example, requires access to telco equipment,

: which at the very least is apparent to the telco people.
: Monitoring which numbers call which other numbers - traffic
: analysis, if you will - isn't, with the right hooks. And
: traffic analysis isn't protected as private, the last I
: heard. The cell phone tap, which of course can't be
: monitored, gives them a voice to the web of these otherwise
: voiceless numbers.
:
: Nah, couldn't happen. Our people aren't that diabolical.
: :)
:
:

One reason that Americans will never become socialists
is that we hate going to meetings.

: ----------
: I don't mean to be anti-government, by any means. I believe
: that, as they say, death and government are both necessary
: evils, and I further believe that we have possibly the best
: form of government yet devised. Yet, like death, it is
: still a terrible, horrible thing to bear, and like death, it
: will always seek out the weakest, most vulnerable parts of
: us to destroy. We have a kinder, gentler plague.
:
: Cheers.
:

People have to become involved. That means taking sides.
Work for the government for a time. Join the Army is you
are young enough. Or at least join your local police reserve,
fire reserve or emergency management chapter. Work from
inside a political party. Get to know those in power. Understand
how foolish most are.

Anyone have a Ford Expedition with radio gear installed ? Where do you run power through the firewall to get to the battery ? I find no grommet of any kind. All wiring harnesses go through a connector on the firewall.

Any help would be appreciated

N5ISV

Hi Randy,

Follow the hood release cable and you should be able to pass a
stiff rod past the grommet at that point to route your power cables.

I have an extra 13.2 volt 35 amp commercial type regulated power supply made
by Newmar Electronics. It is in very good shape and I can supply a JPG
picture
of it.
Would like to trade this for a solar panel that will deliver 13-15 volts at
about 1.5 amps or more.

73,
Sandy W5TVW

Cool! I have felt from the start that if the cellular industry wanted
privacy, digital AND encrypted was the way to go, instead of the silly
STUPID unenforcable (well mostly) ECPA!

Hello,

I have a Kenwood TR-9000 2 Meter All-Mode Mobile for
Sale or Trade.
The radio is in very good condition, and everything works great!

Modes: FM/USB/CW/LSB
The digital display reads out to 100 Hz, but with
the RIT, finer tuning can be done.
This rig is a mobile compact size that may be
used at home or in the vehicle.

Included in this package:

Kenwood TR-9000 All-Mode rig
Kenwood MC-55 Base Mic
Kenwood BO-9 Base Unit (Turns the rig into a base setup)
Communications Specialists TE-32 PL Encoder
This is in the latest catalogues, AES & HRO. This allows repeater
access that need a PL to access. Also have Manual for this.
DC Power Cord (Rig runs off of 12 volts DC)
Operating Manual
Service Manual

I am asking $275 OBO for the entire package or Trade.
If you are interested in this great package, please
E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

Actually I first tried jumpering over the C144 with a 100pf capacitor with no change. I went back to the bench and tried bypassing transistor Q105 by jumping from the emitter to the collector. No change in operation. Then I tried bypassing Q104 by jumping from the base to the collector. Lo and behold, the radio jumped to life and most of the voltage readings were close to the service manual specs. So it looks like it may be Q104 and not Q105 that is at fault since bypassing Q105 offers no change. I am going to order two replacements just in case but replacd Q104 first.

This repair job also gives me the opportunity to overhaul the radio; upgrade the speaker, replace the rubber keypad and replace the pilot lamp.

Greetings, all...

What is the reputaion of Fair Radio Sales? There are a couple of items I've seen in their catalog that I've considered purchasing but have shied away from when I see them labeled "Works -- may or may not be within spec" or other lukewarm recommendations.

So... is Fair Radio a source of good gear? Repairable gear? Workbench Queens? ...or the most expensive way to stock a junk box?

If you have a private opinion, feel free to mail it instead of posting it!

tnx es 73,

Spray-painting your windows works pretty well.
Me, I got the voice synth.

I wrote kenwood and told them that if they made a new display, with decent
LCD, (or VFD) I'd most likely buy it.

Every radio has it's faults, on the V7, they're right up front where you can
see them.
:)

I've found them to be of high integrity and honesty. When they say some-
thing may be out of spec, it probably means it works but they didn't have
time to thoroughly check it out. In other words, I'd rather have "lukewarm"
recommendations instead of a used car salesman's hype.

Hi Eric,

I have bought from them a couple of times and have gotten just what I ordered. If they say the equipment is used expect it to have some signs of wear. They are usually up front with the condition from the times I have dealt with them.

They deal in surplus equipment. Some of it unused and some of it extremely used.

I have one and like it a lot. One thing though, after I got it home
I noticed a problem. Took it back to my local ham store and my tech
friend Eric (WA2LSV at Ham Central) opened her up. Cold solder joint
and a slightly dirty roller inductor. Fixed in 10 minutes and worked
like a charm. MFJ is known for their cold solder joints from what I've
been told.

73,
Tom

I am looking for the following Yaesu accessorys.
For the FT-747GX...FC-1000 tuner and the FIF 232 the CAT hookup and
software.
For the FT 901DM I am looking for the YVM-1 The monitor for the YR
901 and the QTR 24 Clock.

Thank You
Eddie

I have a question. Doesn't the use of digital phones mean that listening in
on conversation is almost impossible. I remember the bad old days with
analogue phones and the lack of security.

I wonder if cellular transmissions can be blocked in a specific
direction? I've been under the impression that they are
up in the 800+mc range, which would mean that metals could
block them. Are cellular phones in cars depending on the
transparency of glass to get to the tranceiver?

Serious questions/ Can a person block the signal in a
specific direction, thus eliminating the possibility
of the transmission being triangulated?

3768. Need equipment suggestions (tuner, antenna, etc.) to deal with interference

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-18 00:00:00 UTC
From: h.brown@worldnet.att.net
Message-ID: <37ba026e.9316937@netnews.worldnet.att.net>
Source record: 100865
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.amateur.equipment

I submit this to what I hope are the appropriate groups and let the experts have at it! I have an erratic newsfeed, so please copy me in email -- h.brown@worldnet.att.net -- thanks!

:Description of the problem

When I listen to AM radio, there is a buzzing noise that obscures the signal. I think this is RF interference. (The sound is like that when you put a halogen lamp with a cheap fader switch near a radio.)

Obviously, the first solution is to stop the source of the interference. It may or may not come from appliances in my apartment or from other apartments. I think Iï¿½ve gotten all my appliances under control.

But the buzzing sound is not diminished.

Therefore the only solution now is to minimize the interference using antennas and hardware.

:What I want to do

I want to maximize signal quality using antennas and hardware (subject to a budget constraint of $350).

Specifically, I want to listen to an AM radio station (AM 630) with the best reception possible for $350.00. This could include whatever antenna is best at minimizing RF interference, perhaps some sort of ï¿½noise canceller,ï¿½ and/or a new separate tuner. I have made a list of possible equipment below.

:Additional information that might help

My tuner is in a rather expensive receiver. It may not be a very good tuner.

First, I bought a $30 radio shack AM/FM antenna. It did not affect the quality of AM reception (or the RF noise) at all.

Next, I connected a battery-powered portable radio (a Sony ICF-S5W) which pulls in a better signal. The Sony is rather old model, and has a ï¿½sensitivityï¿½ switch. When set to ï¿½low,ï¿½ I can hear more of the buzzing. When set to ï¿½high,ï¿½ I hear much less buzzing. Therefore, I want a tuner that has the same or better ï¿½high sensitivity.ï¿½

The radio has the slogan ï¿½sensitivity, selectivity, portability.ï¿½ I also think signal selectivity must have something to do with the great

AM reception, but am not sure. Anyway, Iï¿½d like high selectivity too.

When I use the Sonyï¿½s ï¿½earplug outï¿½ jack and plug it into my receiver, I get an astounding increase in resolution. The AM signal is clear, the buzzing is reduced to an almost inaudible level, AND most astoundingly, I get amazing fidelityï¿½particularly good bass. Would this be called ï¿½hi-fiï¿½ AM? Whatever it is, I want it in a tuner!

In short, I like the results, but am not so happy with connecting a portable radio amongst my stereo equipment. And I also think that if a 20 year-old $20 AM radio can make such an improvement, there may be something even better. (I also know that sometimes you canï¿½t beat old equipment for price performance.)

:Antennas and other equipment I am considering

Now I see an advert for a Terk AM Advantage (http://www.terk.com/amadvantage.html). Iï¿½ll try it if it will make an improvement. I also see something called a ï¿½Select-a-tennaï¿½ (http://www.selectatenna.com/). It is generally considered to work better. It has three types: standard inductive coupling, lead for hard wiring, lead with ferrite bar for inductive coupling.

I also see something called an ï¿½antenna noise cancellerï¿½ from JPS (http://www.jps.com/index2.html). I am not sure if this will do the trick. It is unclear whether it is used for people broadcasting or people receiving AM broadcasts.

:Questions about antennas and equipment

ï¿½Is an inductive antenna (Terk/Selectatenna) going to perform any better than the Radio Shack antenna?
ï¿½Would the antenna noise canceller work, and would it have any synergy with the Terk/Selectatenna?
ï¿½Should I be looking for something completely different than what I have listed?

:Tuners I am considering

It is my understanding that stereo AM tuners will give a better AM performance even in mono. But, stereo AM equipment is pretty expensive in the US. I did find several US models of Japanese equipment, where the main difference seems to be that the Japanese equipment has the stereo AM decoder, and the US model doesnï¿½t.

For aesthetic reasons, I am looking specifically at tuners that would look at home in a stereo cabinet.

The models are:

Yamaha TX-950
http://www.yamaha.com/cgi-win/webcgi.exe/DsplyModel/?gPPT00010TX-950

Sony ST-SA50ES
http://www.sel.sony.com/SEL/consumer/ss5/home/homeaudioes/esamfmtuners/st-sa50es.shtml

Onkyo
T-4711 http://www.onkyo.co.jp/www_e/nwpdct/nwpdct_e/T4711_e.html

I did not list Denon because the US model (TU-1500RD) has no signal strength meter (?), and the Pioneer tuners (F-93) are discontinued in the U.S.

:Questions about tuners

ï¿½What tuners have the superior fidelity (ï¿½hi fiï¿½ AM) that I noticed in my portable radio?
ï¿½What tuners have the best ï¿½high sensitivityï¿½ that cuts through the RF interference?
ï¿½What tuners have the best ï¿½selectivity?ï¿½ (Again, not sure if this is an issue for AM.)

:My list made an assumption that I want to also ask about:

ï¿½Would the (above) U.S. versions of Japanese stereo AM radios produce the same great mono AM reception?
ï¿½Does the absence of the actual stereo AM chip reduce the performance of mono AM?

If you read this far, thanks! I hope to hear any suggestions you have.

You're right....and it's part of a control thing. Part of
the reason they target inner cities is probably because
they're easier targets - they can't afford a real lawyer, so
they plea bargain, even if they're innocent, then have
records and are screwed. Driving their cars around is a
bonus.

I can't understand why some people get off on running other
peoples lives, unless it's because they realize they have so
little over their pathetic own. Oh well.

Just bought one! Overall I'm impressed, but I was honestly
expecting something cheap and flimsy, given the price, so I
probably have a bias.

Sensitivity - good, to the point that it'll pick up beyond
what it will transmit to, as far as repeaters are concerned.
With my other radio a FT-2500, where "if I can hear them, I
can talk to them", this is a switch for me.

Audio - nice and loud, a little bit rough sometimes at high
volume, but better than I'd expect for a tiny speaker.

Battery life - great! I don't know how they do it, although
I don't use the light much. I'd guess I've made a dozen or
more conversations, plus listened to at least twice that
many more, and have had probably 20 hours of standby on one
set of AA alkalines. I was going to use nicads, but given
that I may not even bother.

It's pretty easy to program and use, but the search is a
little weak (whole band only, I think, not sure), and no
lockouts on the scan. I suppose for an $80 radio this is
being picky.

LCD backlight is great, has a couple of other neat features,
like a selectable courtesy beep.

pluses:

It's tiny! It runs on 3AA cells! It only costs $80 and it
actually works! Easy to work with one hand.

drawbacks:

No external antenna hookup. (I bet the PA output isn't 50ohms.) But the flip up antenna is actually cool, seems to work pretty well.

It's a given, but 340mW is a bit weak. Works OK for the local repeater hear, if I'm outside and within a few miles. Not real great in a car. Simplex, I'm betting maybe a mile or two, both radios the same, line of sight.

Manual is about the worst I've seen in terms of completeness. It's two sides of a legal sheet of paper, in two languages, with a schematic. You could call it concise if it didn't leave things up to trial and error.

I'd love to hear how the accessories, like VOX headset and carry case are, but they seem to expensive to me in relation to the cost of the radio.

Just random thoughts

Hi Corey, if you are going to be using the FT100 in multiple roles where you have to be switching the rig from base to mobile/portable, etc often, then the FT100 might not be for you.

I was really looking forward to the FT100 for a long time and then I found out that it's remote head uses the same cable connector as the ft8500/8100 etc. This cable requires at least 1 screw at each end to hold itself in place. What's worse is that the screws are not even captive like in so many computer cables so you have too keep track of the screws and a mini screwdriver.

IMHO Yaesu really fouled this up!

My Icom IC706MKII needs no screws to hold it's remote cable on (although there is a provision for one on the radio end but it's only a backup). Also, with all connections going through bulkhead connectors, there is no need to worry about pigtails wearing out!

There are other things to consider - the Icom has a much better mic hookup, allowing connection to the control head, to the rear mic jack or to the ACC plug. Same goes for the external speaker.

I was able to set up dedicated connections and cables for both my mobile and my base setup, which translates to a VERY fast switchover time (from base to mobile operation) of 2 minutes, 17 seconds!

BTW I installed SO-239/BNC adapters on my base & mobile VHF coaxes and a pl259/BNC adapter on the radio's VHF antenna port. This makes sure I don't get my HF/VHF mixed up and also speeds up the connection process.

Last words: I waited and waited for the FT100. I finally gave up when a good deal on a 706mkII came my way and now that I've seen the FT100 and heard all the problems,

I'm happy I got a 706.

VERY happy.

Ken KG0WX

3784. When was the IC-725 Introduced???

3785. Rotor with mast pass through

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-18 00:00:00 UTC
From: Roger Halstead <rdhalste@tm.net>
Message-ID: <tYsu3.2032$Ss6.196627@newshog.newsread.com>
Source record: 100882

Does any one know of a heavy duty rotor that will allow the mast to pass through the rotor in a fashion similar to some of the TV rotors.

I'm installing a 97 foot Rohn 45G to replace a much smaller 90 foot tower which has two arrays on top. The tri-bander and the TV system with its rotor mounted on top of the shaft holding the tri-bander. It works, but the TV antenna system is not independent of the tri-bander.

With the new installation I want to use three masts coaxialy. The largest will have the tri-bander, the next will have the UHF/VHF array, and the inner mast will have the TV antennas mounted up on top. At least that's the plan.

That means to drive the outer two masts I will either need to find a rotor that will allow the mast to pass through, or install a sprocket and chain assembly with the rotor side mounted.

Yes, I could build up a motor and worm drive assembly with servos to indicate position, but I'm trying to keep it simple and relatively light weight.
This tower installation is turning into a major project.
It took me three days just to dig the hole for the base installation and I've not done the guy anchors yet.

Cross-posted to: rec.radio.swap,rec.radio.amatuer.misc,rec.radio.amateur.equipment

I have four peices of radio gear for sale.
1) ICOM 740 with optional power supply. This rig can be both moblie
and base unit. This rig covers 160 thru 10 with the WARC bands
included. It output is 100 watts. It has digital read out and on a scale
of
1 to 10 I put this radio a 8. Its in 100% good working order and I'm
asking $450.00 you ship.

2) A Kenwood TS 120 moblie HF rig. This rig is a very simple HF rig. It
covers the convental HAM bands 80 thru 10. It does about 70 watts out
and is a again a 7 on a scale of 1 to 10. I'm asking $275.00 for the
radio mic and power cord.You pay for the shipping and the insurance.

3) Yeasu FT 2400 50 watt 2-meter moblie $150.00 you pay shipping and
insurance. This is a good little 2-meter rig apperance wise its a 7 on a

scale of 1 to 10. It comes with a keypad mic.

4) ICOM 27 H 2-meter mobli rig 45 watts out mounting bracket and keypad
mic. This is a good little 2-meter rig apperance wise its a 7 on a scale
of 1
to 10. $125 you ship.Drope me a line if you are interested in any of
this gear.

Thanks for reading and 73 from Oris

HI All,
I am looking for views, reviews, tips, comparisons and anything at all on the TS-950SDX, if anyone knows of any homepages with pics and info on I will be really grateful.
IE:- How does it differ to the S and SD, how does it compare to the FT-1000MP, IC-781, Ten-Tec Omni etc...
Please send any replies to my mail address as routing for this reflector has been sporadic at best.
Many thanks,
Gary - G7TOK

This fits the Kenwood TM-742/741/73x triband series radios.
Will not fit on the TM-V7A radio - that needs the DFK-4c kit

Thanks

3795. FT-100 Current status?

Does anyone know the current status of the FT-100 in regards to known problems? Has
Yaesu fix them yet? Also are there still an above normal failure rate of new radios? And finally,
I heard a rumor that Yaesu was going to bring out a new version of the rig that has all the
problems fixed. Is this true and if so when will the new radio hit the market?

Eric,

I've dealt with Fair Radio a few times. sales people were polite, items
were as listed. Shipment was prompt.

IF they say USED-NEEDS REPAIRED, it's self explanatory. The bad thing
there is, if the stuff is too old, unless you buy one for possible parts,
you may never get it to work for lack of parts.

If they say new, I've found no reason to doubt them.

Their descriptions are pretty honest.

No matter which company you deal with or individual, it is up to YOU as to
whether you do make the transaction. CAVEAT EMPTOR. Buyer beware.

A fellah from Texas Towers (Matthew) was on a thread recently, and
said that the failure or return rate from the ft-100s they'd sold was
quite low -- I think he said out of 67 sold, one came back.

I would side mount the TV and VHF arrays separately (does restrict coverage)
and put the tribander in the tower.

Source record: 100956

Hi Jeff. I wish it was that simple. The PG-4P cable has a TTL to RS232 level converter (both ways) built into it. If you think $30.00 is high for such a thing, look at prices for the CV-17 level converter for Icom's base/mobile rigs...$119.95 for a similar circuit, and you have to supply your own serial cable! Fortunately, RT systems has a generic unit for $40.00.

Not true for GSM, at least. The A5/1 encryption is pretty strong, and
even the weaker A5/2 is not a trivial task for an eavesdropper.

See more info at:

http://kbs.cs.tu-berlin.de/~jutta/gsm/js-intro.html
http://jya.com/gsm061088.htm

The CDMA air interface is however not in itself a guarantee against
all eavesdropping, and the current IS-95 implementation suffers from a
rather weak encryption:

> IMHO Yaesu really fouled this up!

> [...] Also, with all connections going
> through bulkhead connectors, there is no need to worry
> about pigtails wearing out!

Is there any room for a pro-pigtails comment? No? Well, here it is anyway! :-)

My initial reaction when buying my first mobile rig was that I didn't want pigtails -- they just looked too frail. My first mobile had bulkhead connectors because of that.

BIG mistake.

With the rig mounted on the side of the transmission hump it transmitted (no pun) every vibration from the car, through the rig, to the back connectors. I ended up tightening them daily. One time I got frustrated enough that I pulled out the Vise Grips and really cranked down on the connector ... and split the PL-259.

When I upgraded the mobile to a Yaesu FT-8500, with pigtails, the connector sat on soft carpeting and hasn't needed to be tightened, although I still have the habit of checking it frequently. The 8500's coax pigtail has a nice strain-relief molded onto the cable and, while they still look frail to me, I consider them an advantage, not a disadvantage, where the rig will be exposed to direct vibration.

The old rig lives a sedentary, peaceful retirement on a table at home which is quite vibration free.

...just a contrary thought from a lowly tech-minus...

All, right, I don't care if it only "Works -- may or may not be
within spec" -- I want that ME-262 they have in their catalog... :-)

Thanks all for the mail and postings -- I'm glad to hear that they
have such a good rep!

Awww...What are you going to do when the FCC drops the bomb...and puts a NO-CODE class in each class of ham lic ???

NO-CODE NOVICE
NO-CODE TECH
NO-CODE GENERAL
NO-CODE ADVANCED
NO-CODE EXTRA

The world of Ham Radio is going to be a much better place then. I think that will EXPANDED the hobbie.... help it grow...isn't that what is all about ?!?!

Just a hint.....buy stock in your favorite Ham Radio Manufactures .... They will sell MANY MANY new radios when this happens.

The cap probably won't be enough - you'll also need a series choke
capable of carrying the transceiver's transmit current. The choke
should be toward the battery, the capacitor on the other side,
closest to the radio. Unless you like to experiment, I'd opt to
buy one already made, like the Radio Shack catalog numbers 270-051
or 270-055. Worked great for my 10W KDK 2016A.

Mine only uses screws at the radio end. The control head snaps on my remote mount without needing any screws to make the connection.

> What's worse
> is that the screws are not even captive like in so many
> computer cables so you have too keep track of the screws
> and a mini screwdriver.

Good point. Yaesu really ought to re-think that one. In my case it does not matter because I only use the rig for mobile operation.

>
>
> There are other things to consider - the Icom has a much
> better mic hookup, allowing connection to the control head,
> to the rear mic jack or to the ACC plug. Same goes for
> the external speaker.

At first I also thought this was a drawback for the FT-100 but when I did my installation I found it was actually an added value. I was able to run the mike connector cable and jack to a more convenient place on the console between the seats while having the control head mounted at the top of the dash. This way I don't even have to turn my head to see the radio controls and there is no mike cable running down the dash blocking or getting in the way of the controls on the dash.

My radio is mounted in the back of the vehicle and having a separate speaker cable let me mount it behind the driver side seat without having to run an extended speaker cable back from the control head.

Hi Lee,

I have had my FT-100 for several months and have been using it mobile without any problems. I really think that some of the so-called high failure rate has been due to mis-information on the news groups. I suggest that you sign up to the FT100 mail list on ONELIST and see what other owners have to say.

Even the few on the list who have had problems are for the most part happy with their radios.

But as with any radio check it out for your needs. I find it a great radio for mobile operation but would find it too small for my liking for a fixed station. But that is just me, 30 years ago I used to think that my 150 pound Heathkit Apache was just the right size for a transmitter (Hi Hi).

Or you can use a bifilar wound common mode choke (two choke windings on one core, current going opposite directions, sort of like a transformer run sideways..) which passes DC just fine but really attenuates even audio frequency AC .. the more turns the better ..

3826. Icom items FS

Source record: 100973

For Sale:

Icom HM-10 "scanning" mic. This one has an 8 pin plug, and has scan, up/down features, etc., right from the mic. Still in the box. $ 40

Icom HM-36 up/down mic, no scanning features, 8 pin plug, new. $ 55

I have 3 accessories left for an IC-2 AT handheld.

BP-4 "Empty" battery pack, to put your own alkalines into $ 10

Stubby Rubber duck antenna - actually works BETTER than the longer original one, and can be used on any HT with BNC connector $ 10

DC cord. This can be plugged in to the "standard" BP-3 battery pack and charge it while in the car. Of course you can also use it then. $ 10

Prices do not include shipping from Florida.

Thanks.

Recently someone sent me an email because I had referenced the fact that I was involved at one time near the end in the closing of the old RCA land mobile division in the Meadowlands,PA. The query was in regards to any knowledge I might have on where parts for some of the older RCA (and TAC TEC, the short lived succesor to RCA Land Mobile division) radios could be found. Unfortunately I inadvertently erased the e-mailm before I could reverify my source. I now have that source and If you will contact me direct via my e-mail at n7ex@athenet.net I can help you.

Regards
Dave

If the expedition is like my F-150, and I think it is- you will find a round rubber plug, about 1 1/2 inches round....on the firewall....if you pull the carpet down a bit, there is a black material that is the outer coating for the floor insulation. There was a round cutout there, that you can lift up carefully a circle of that insulation, and that exposes the back side of this rubber plug. You then cut an X in this plug, pass your wires thru and then push the insulation back in place... Best thing of this type I ever saw....

Although I have recently purchased 2 VX-1R's. I need yet another for an overseas friend, so...

Please state price, age, condition, accessories and firmware version in your reply.

To check firmware version, hold down the 'AR' button when turning the radio on, then step through
the various screens to see the version number, e.g., A105, etc. If you don't see a number, then you
probably have the latest model.

Yes digital transmission does make it nearly impossible to receive cell phone conversations. However, retrofitting all the cellular analog sites at around US$200,000+ is something the carriers are bulking at. Atleast cellular carrier I work is! Our competitors have installed just enough sites to legally claim they digital service atleast that's what my counter parts have told me. So, until PCS system put more pressure which is not happening at this time due, cost of around US$1.5 million per cell, analog will be around for awhile. The last figure I heard was sometime around 2025 to 2030 was the projected end of analog in the US.

This is my opinion!

Subject: Kenwood TK760/860 Question

Can these radios cover the ham bands? I am taking my tech exam in a few
days
and would really love to keep these radios to use.

Jarrod Taylor
Please reply by email.

Dear Jarrod,

We use a couple of the TK-760s on commerical VHF frequencies within our mission organization here in Papua New Guinea. I have programmed up the -760 that is in my office for multiple amateur frequencies. It will recieve down to 144.90 at least. That is the PNGARS data/packet freq. and I hear data going across it. My radio transmits in the 146 - 148 range with no troubles at all.

So, if you can get it programmed up, go for it.

73,
Norm Beasley, P29NB/KO4CB

I work in the inner city and the reason for targeting that area is because of the population density of dope dealers to normal people. Right down from office every night after dark, at least 10 - 20 cars sit with dealers selling dope. If one drives by in a nice car they lock on to you like a heat seeking missle pestering the hell out of you to buy their crap. In fact, never do I see these dudes and dudettes driving a piece of junk car. Always are Mercedes, BMW, Porsche, etc. Most have better lawyers on the retainers than us normal working class type.

No where I live is far out in the country and if there a dope dealers out here, they must be keeping it off the streets. In fact, it will be a cold day in hell before I ever live in a city again because of my privacy, right to peace and quiet were being infringed upon by, as you labeled them, targeted masses. I say let the Feds have them because local cops wont do nothing execpt take one's assault or theft report. Most of "targeted masses" do not work, collect welfare, steal and sell dope, like several of my former neighbors.

I beilieve the law abiding citizen is being picked on. Check who lobbied for cordless phone restrictions, it sure was not the Cell phone industry. It was all those creeps out there dealing dope over cordless phones. Money talks and bull shit walks is a saying often heard in Washington DC, and that says it all. All of us are losing our rights so the petty thugs running this country can create black markets.

Take my word for it. The NSA can read it just like the front page of a newspaper. I work with military encryption, much stronger than CDMA or TDMA and they can read that if they want to expend the effort and equipment. We do build some stuff that is much more secure, but you don't even want to know the price tag (not to mention the fact that we can't sell any of it unless the government allows the sale).

3859. Prices Reduced Amateur Gear FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-18 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <37BB4E83.C4BF5B8F@dirtball.com>
Source record: 101006

I have four peices of radio gear for sale.
1) ICOM 740 with optional power supply. This rig can be both moblie
and base unit. This rig covers 160 thru 10 with the WARC bands
included. It output is 100 watts. It has digital read out and on a scale

of 1 to 10 I put this radio a 8. Its in 100% good working order and I'm
asking $400.00 you ship.

2) A Kenwood TS 120 moblie HF rig. This rig is a very simple HF rig. It
covers the convental HAM bands 80 thru 10. It does about 70 watts out
and is a again a 7 on a scale of 1 to 10. I'm asking $275.00 for the
radio mic and power cord.You pay for the shipping and the insurance.

3) Yeasu FT 2400 50 watt 2-meter moblie $150.00 you pay shipping and
insurance. This is a good little 2-meter rig apperance wise its a 7 on a

scale of 1 to 10. It comes with a keypad mic.

4) ICOM 27 H 2-meter mobli rig 45 watts out mounting bracket and keypad
mic. This is a good little 2-meter rig apperance wise its a 7 on a scale

of 1 to 10. $125 you ship.Drope me a line if you are interested in any
of this gear.

Thanks for reading and 73 from Oris

I like to compare the code/ no code debate to the US welfare system. On one side you have people who have worked hard for what they have, and paid the price for the success they have achieved. On the other side you have people who do the minimum to stay in the system..but want/demand what everyone else
has without doing the work to achieve it. They have the attitude that just cause they bought a radio (like they did as CB'ers) we "owe" them the right to work HF without making them "pay the dues" by learning code. They will whine and cry till they get their way...and just as in the welfare system..if you criticize or go against their agenda you are mean spirited or
one of those backward thinkers cause you want what you have worked hard for and achieved..to retain its value.

Just a thought...

Let the flames begin :-)

Hi Chris,
I've been researching the same thing lately, and the only other company I've found that makes HF mobile amps is Henry radio. They have a web site and their products look pretty good. I sent them an email recently concerning their HF mobile amps and they said they'd get back to me concerning certain details. To date they haven't. I don't know whether that means that they have lousy customer support, or just a badly managed web site, but their amps look pretty well made.

3866. Re: Comments on Yaesu ft2600?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-18 00:00:00 UTC
From: Keith Lodahl <lodahlkh@internetwis.com>
Message-ID: <37BB703F.E3A2F97A@internetwis.com>
Source record: 101013

Early models (like mine) had the mic hot while receiving. Some voices were decoded like tones, and random numbers would show on the display. A Yaesu update fixed this problem. I also had a defective mic (parts falling out), replaced by the dealer. Other than these two items, and the ADAMS software is still on backorder, I really like the radio. It has a good receiver, and those who listen to me tell me that the audio is great. If they only would get the software/cable out...

1) There is always room for a counterpoint. That's the idea behind the
usenet.

2) You are who you are, not what your license says. You shoudn't beat your
own ego up on such a minor thing as license class. If you must then you
might as well paint a red dot on your forehead (no offense to hindu's).

Now back to the discussion at hand:

If my radios pl259's are vibrating loose then it's time for some shock dampening work on that mount before somthing expensive breaks! You can't cure a problem by masking a symptom, you've got to fix the problem!

'nuff said.

BTW I had 2 FT8500's (both non-potato head mics). Loved them! Here are 3 tips for ya...

1) Don't transmit unless you are sure of the power supply. If these rigs do not have enough power when they tx, it can lock the CPU which means
an internal hard reset. I found this out when I tried to TX and my connections were a bit loose. The rig just shut down and would not power back up.

2) If you ever get the chance, check the mounting screws that hold down the PA modules to the chassis. Yaesu has had a few of these rigs (and even a few FT847's!) come with loose mounting screws, resulting in erratic power output. BTDT.

3) Look at the back of the rig where the coax enters. See the other cover
plate? If you need to seperate the VHF/UHF coaxes into 2 lines you can.
Yaesu split the duplexer into both VHF/UHF boards, then combined the outputs via a heavy pin soldered between the boards where the coax attaches. if you remove this pin you can then solder your own 440 pigtail.

It's cheaper than buying a duplexer! :) Also, the whole duability issue for pigtails in the 8500 series is mute as they are easy to replace if needed. I doubt this is true for the FT100, though....

Announcing the Sixteenth Annual Odessa Texas Hamfest, sponsored by the West Texas ARC.
This year, as in the past, the Hamfest takes place on the 1st full weekend of November. This year, the fest is on November 6th & 7th. We expect over 2,000 in attendance over 2 days. Dealers come in from around the SouthWest.

We are one of the ONLY Hamfests that has ONLINE registration! You need not be present to win any of the major prizes, but must be present for the hourly door prizes. Over 200 tables should be filled as they were last year. Prices are reasonable & will remain so. We have hidden transmitter hunts & lots of fun. If you are planning on making a fest in the SouthWest this year, don't overlook this one!! Check out our website for more info on dealers, pictures from 1998, and prize info.

Check out our hamfest page at: http://www.wt5arc.org/hamfest/hamfest.html
Or, the main club page at: http://www.wt5arc.org
(where you will find the link for online registration)
Regular mailing flyers go in the mail in late September & if you are interested in receiving one, I need the mailing info by September 1st.
See you in November

Instead of paying $$$ for a HF mobile amp from the Ham manufactueres I suggest looking for the CB type for $200-$300 and you get more Power per watt and they work from 10 meters to 80 meters (no 160 mtrs). so a seaarch for "CB AMPLIFIERS" or "COBRA" or "PALIMAR AMPS" etc.

>

Better talk to the people at alt.radio.family :). You can do 2 miles + with legal FRS
radios
underspecial circumstances. Plus amplifiers would only hurt these radios since they are
intended to
use
.5 milliwatts. Why use an amplifier when you can do it legally.

> >> I have also seen far too many businesses using FRS radios, because

>

Yet FRS is under Part 95 rules, just like the Citizen's Band is.See
http://www.fcc.gov/Bureaus/Wireless/Orders/fcc96215.txt
Someone worries that business misuse of FRS frequencies could harm the stated
purpose of why FRS was created. I for one wouldn't like FRS to turn into CB myself, but it
is
a un-licensed radio service.

I ran both the stock MC-43 (?) hand mike as well as an MC-60A on my
TS-850s/AT. I always got great audio reports with either mike, and many said
the hand mike had stronger audio than the MC-60. You might want to try a
different mike, maybe your particular one is bad. If the problem persists,
then I would start looking at the rig itself.

Source record: 100762

Hello. I'm just about to move to a QTH and am reconsidering my antenna designs. One possibility that I've considered is phasing verticals for use on HF. In particular the Solarcon A-99 CB Vertical for use on 10m/15m/20m. My question is, how high above the ground would I have to mount all of them for them to be effective? Would 5-10ft work or would I have to go 15-20? And would it improve their performance to mount a Ground Plane on each of the vertical antennas? Any help at all would be appreciated. I would most likely mount 6-8 of them, if that helps any. Thanks for reading and let me know if you can help.

My mistake. Still for the type of operation I desire 1 screw might
as well be 100. When I go mobile, I take my only rig with me. Yea, I
know, I know, I'm a poor slob. But hey I'm not rich and my Kids needs
come first. Anyways, when I go mobile, sometimes the decision is in
a semi emergency (like the tornadoes that struck us last spring) so
I need a very simple, low light, fast and no tools setup.

> > What's worse

Agreed! I guess the preferance between the rigs will ultimatley be
a matter of how you intend to use them. Thanks to the folks at Icom,
Yaesu, Kenwood, Alinco, SGC and TenTec for giving us such choices!

>
> >

>
> My radio is mounted in the back of the vehicle and having a separate speaker
> cable let me mount it behind the driver side seat without having to run an
> extended speaker cable back from the control head.

Right - Of course the Icom could do that as well. My point was to stress
the flexibility of the Icom's design - front, back, Acc plug - whatever

you need, the Icom can accommidate you! Again, this is only an issue if
you
need the feature. I imagine most of us won't but it's nice to see the
R&D
folks at Icom did their homework.

No doubt NSA can read it as I used to work within the "community". The first rule of encryption is to be able to break it before deploying in case it get stolen.

The point of my post was the average Joe/Jane on the street with his/her scanner wont be able to.

Certainly for the Cell Phone part of it.

However, pressure was brought to bear upon our elected offical to include cordless phone due to the Supreme Court ruling allowing evidence gathered by a Police Agency in Florida in the form of transcripts of cordless phone conversations.

A Deputy Sheriff friend used evidence gathered this way to prosecute several dope dealers within his neighborhood until the ECP made it illegal.

I believe dope is a big business in this country, and therefore falls under the "Golden Rule". (in case anyone has forgotten, The Golden Rule states: He who has the gold makes the rules.

> We have people whining about 5 wpm cw. Ye gods, any reasonable
> person can reach that level in one day.

You must be referring to the original morse code, which bears little resemblance to today's code. I know that Sam claimed that anyone could learn the code in an hour, but it was a drastically simplified code compared to what we have to deal with today. I've never met a single ham who even CLAIMED to have done this, much less known any who actually did it. To top it off, we have ARRL VECs who test beyond the FCC requirements, apparently in an attempt to keep people out of the hobby. (Specific case, local VEC who will not give the CW test in farnsworth, even though the rules permit it)

> In short, the no code fellas are misguided cbers, in my view. If they
> were on cb, no rules, as much power as you want.

I resemble that remark!

Well, let's see. I'm president of the local club, and the guy who maintains our repeaters (the advanced and extras are too "busy" or unmotivated to show up). I took the county EOC station from five unterminated hardlines to fully functional on 80m-440 (no 6 yet) with voice and SSTV, and APRS, as well as putting up the county's APRS digipeater. (Working on EMWIN proposal, and microwave video link) The county EOC director recently rebuilt the conference room, and moved his desk in next to our operating position. I think I must be doing something right.

When our 440 machine took a lightning hit and became a box of split transistor soup, I rebuilt it, with no manuals or schematics. (the former tech committee bunch lost them) Only about a dozen transistors blown after all. Then I corrected the noise, distortion, and hideously overdeviated courtesy tone that the adv and extra boys had set up on the audio, and put it on the air. Earlier I had retuned the duplexer, and reset the receive freq, which had drifted off about 7kHz low, and was giving very short range. Apparently none of our advanced and extra hams ever bothered to check it. It's fine now.

On top of that, I've built up my mobile station, APRS in tracker and full computer mode, plus 2/440 voice, and SSTV, with GPS and DF capability from 6M through 928 MHz, and I use it regularly.

On the base, I run an APRS Igate, and occasionally copy 20m SSTV for laughs.

All this was in the last year, along with a full time job, and two teenaged daughters.

You got it, just another misguided CB'er. 10-4 BEEEEEP.

> This isn't really meant to be hostile. People who aren't fond of cw
> aren't going to use it. They don't wind up on the HF bands (heck,
> they wouldn't know how).

There's more to HF than just electric smoke signals.

>We simply are presiding at a slow requieum.

Indeed. It's the requiem of the "old guard" who dosen't want anyone on the air they haven't known for the last 40 years. Like the Russian politburo in the 80s, they are loosing ground daily.

FWIW, we have two newly licenced hams, (16 and 12 years old) teaching a class of three adults and eight Boy Scouts, to become new hams. I sit in, and help them illustrate technical points. The 16 yr old worked this summer at a 2 way radio company, put up a couple commercial repeaters (with help) and is a step or two away from his own 440 machine.
He also came up and helped me work on the repeaters one evening, fixing problems that have been there for at least seven years.

I did learn the code, it took months of study, 1-2 hrs a night, several nights a week for me. (Thanks to SuperMorse, and W6FXN, wherever you are) But it didn't add anything to my abilities, it didn't make me a different person, and it certainly didn't make me value my licence any more than I would have otherwise. I passed the code test (both ways) and never used it since. When I took my tech theory, I passed everything through advanced, and missed extra by one point. I guess I should have studied something beyond the Tech test. :) Had there been a no-code tech when I took it, I would have gone that way.

But for learning the electric smoke signals, I'd be an extra today. Oh well, from what I hear on 20 meters with extra class callsigns attached, it dosen't seem much of a loss.

Maybe Mr Hollingsworth will make it a different situation in the near future.

Hey...everybody oughta just shut the hell up and go play with their radios...Isn't that what we got licenses for?

If you got time for this shit you need a different hobby....that goes for me too...

> N1DVJ
>
>

Well said Mike.. Especially the part about Uniden making that rig..
Radio Shack sells radios made to thier specifications by other
companies.. I own 2 HTX-202's, an HTX-100, and an HTX-242 and they are
all great radios.. If and when they come out with a multi-band HF
mobile, I'll be in line to get one. At present I'd like another HTX-
242 for one of my other vehicles.. One of those new HTX-200's wouldn't
be bad either..

The part about crap is something like a barber. Give ten guys good
haircuts and they quietly say thanks and maybe give you a tip.. Give
one guy a bad haircut and he let's the whole world know..

Let's try and get this thread back on the discussion of a decent
radio. Maybe if we could hold a thread to a specific topic and not go
off slamming each other because someone doesn't know code or they think
xyz radios are total crap, the companies that make radios would pay
attention to the thread and incorporate our suggestions. We have a
powerful group if we could just bring it together somehow...

Stay on topic, stay off drugs, and stay on the air...

QST:

The only logical thing to do is INCREASE the code requirements.

All this stuff about doing away with the code requirement is terribly unreasonable.

Result: Serious no-code hams would learn the code and upgrade.

To those who drop out, get a CB radio and continue to enjoy.

Everyone sez to drop the code to get more hams into the hobby.

Who says we NEED more hams in the hobby. There's' enuf QRM now.

Just imagine DX pileups with twice as many stations.

Just imagine twice as many kerchunkers on ur favorite rptr.

Just imagine ur ham club overrun with people whose idea of a ham station is a handie-talkie and a belt clip.

Source record: 100909

Does anyone have any info on remote control of a motorized Tri-Ex (LM470 in this case) tower? The up/down control box on the tower uses 120VAC to run to the motor and limit switches, and the up/down switch is 3PDT. Tri-Ex offers a $1000 remote control kit, which I assume uses low voltage relays over a control line (or wireless?). I'd like to remote my tower, but $1K is a little rich for my blood. Any info would be greatly appreciated. Thanks & 73

Howdy,

Let's just hope that the cost of FRS rigs stays high enough so that everyone doesn't buy their kids one. I have an early R-S model with only ONE channel and three quiet codes.

Funny story:

We were camping at a bluegrass festival in June. My granddaughter befriended a little girl mabey 8 -9 nine years old. She wore a Cobra around her neck on a string.

I asked her what it was and she said it was her Cobra, 2-mile range, so that her mom could keep track of her.

Later I saw her running frantically down the road almost in tears. I asked her what the problem was and she said "I just called my mom and she didn't answer. I've gotta see what's wrong!"

She was really concerned.

I don't suppose the fact that she had just gotten out of the swimming pool wearing the radio had anything to do with it. :-)

Does anyone have any info on remote control of a motorized Tri-Ex (LM470 in this case) tower? The up/down control box on the tower uses 120VAC to run to the motor and limit switches, and the up/down switch is 3PDT. Tri-Ex offers a $1000 remote control kit, which I assume uses low voltage relays over a control line (or wireless?). I'd like to remote my tower, but $1K is a little rich for my blood. Any info would be greatly appreciated. Thanks & 73

Jerry,

In as much as I agree with most of your message, perhaps you could point me in the direction of the code training tapes/CD-ROM/hypnosis/crainial implant that would allow this "one day 5wpm achievement"? When I passed the 5wpm, it certainly wasn't hard, but I had prepared for about 2 months, about 40 minutes per day.

And in support of the "No-Coders", I've known plenty that have been involved with ham radio in the "purest" sense as VHF net controllers, club officers, ARES/RACES enthusiasts, and satellite supporters. On the other hand, have also heard deplorable operating practices on HF. I don't believe that 'No-code' is the death of ham radio, but I certainly wouldn't like to see the requirements drop much less than what they are now...

No it wasn't. The ECPA pre-dates that event, and in fact the couple who
were spying on the conference call involving Newt were prosecuted under
the ECPA (though not with much vigor since the prosecutor down there is
a democrat too).

Sounds like a power supply problem to me. The radio *will* go nuts like that
if the supply voltage falls below about 11 volts under load. Try it with a car
battery and see if the problem goes away. If it does, you have a wimpy, or
broken, power supply. The radio needs a supply that can provide 20 amps
at 13.8 VDC.

Also check the DC wiring between your power supply and the radio. You
may have a poor connection, or a fuse or fuse holder which has a high
resistance. That will produce the same symptoms even if your power
supply itself is Ok.

3943. Kenwood stock HF hand mic crap????

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-19 00:00:00 UTC
From: Derf <ke4ros@hotmail.com>
Message-ID: <7phf1j$6oa$1@nnrp1.deja.com>
Source record: 100920

I have purchased a pre-owned TS-950SDX and the stock hand mic that came with it seems not to work too well. I also have a Yaesu FT-990 and it blows the 950 away when it comes to pure audio power and clarity on the air. I have checked all the controls (Mic, ALC, etc) but nothing seems to improve the audio on the 950, it seems to be transmitting power, but very little audio.. I am considering replacing the mic, but would like to know also if it could be the 950 itself and if Kenwood stock hand mics are known for poor quality.
Test setup was: One each TS-950SDX and FT-990 with each connected to similar antennas, 5W output on each using USB, and monitored transmit signal from one unit on the other. (no DX stuff, only 100' between antennas).
Any ideas?

Yup, Hams thought that way too about 10m amps until the FCC changed the regulations. I have seen a few too many posts on the VHF-UHF Ham news groups from people asking how to modify their FRS radio for external antennas and where to get an amplifier. The handwriting is on the wall.

>> I have also seen far too many businesses using FRS radios, because

GMRS is for business use while the FRS is for Joe/Marry citizen to use at the park. Why do you think the FCC calls FRS the "Family Radio Service"?

CDMA is direct sequence spread spectrum modulation,
same or similar to GPS.
Therefore you can be located to about 50 meters easily,
if reception conditions are good, you may be spotted
to within 15 meter accuracy.

GSM may be less accurate, guess which system will be
preferred by the governements.

What a confusion there, here and everywhere, about digital security.
GSM Digital phones are secure, nobody can decode them off the air.
FBI, CIA, KGB and colleguaes, are fed the conversation
from the phone net provider on request.
For decoding you need to know the 'master key'
which is in your SIM card and in the provider's server only.

CDMA security may be weaker? I do not know.

This TR-4C station is in very good looking and good working condition.
All original and on the air. 8.5+ out of 10. Comes with a good copy of
the manual. The receiver is very sensitive on all bands and the
transmitter sounds good using three 6JB6 in the output. Just plug in the
mic and you are on the air with full output 80 through 10M.
$350+shipping
I have jpgs available if interested. 73 Chris VE3NGW/W4 Florida

Yaesu FT-90R. One band at a time. Review in current QST pretty good. I have had one for about 4 months now. Love it. Had it on the air and programming freqs into it with in 5 minutes out of the box. Still have not figured it all out yet as I have it in the mobile and just don't have the time. Maybe I'll take it and a small gel cell deer hunting and play with it. It is very very tiny. Not much bigger than an HT of 8 to 10 years ago! And the control panel separates. Great motocycle mobile radio! I don't know about the computer program for it though. Is it out yet? Rudy, K8SWD

No, that's a joke/tongue-in-cheek comment. It's my response to the
"I'm an Extra, and I *know* ... [something totally ludicrous]" stuff
you see and hear.

> Now back to the discussion at hand:
>
> If my radios pl259's are vibrating loose then it's time for some shock
> dampening work on that mount before somthing expensive breaks! You can't
> cure a problem by masking a symptom, you've got to fix the problem!
>
> 'nuff said.

mmm, I disagree. Riding in a car, you don't realise the sheer amount
of vibration going on around you because you are on a padded seat, cusioned
by more organic padding, :-) and your ear compensates for lots of it.
Use a camcorder to give you an idea of what it's really like -- run with
one on and play back the tape, or set it securely on the dash of your
car and get out onto a highway, and play that back. (This is why
Steadicams are such great tools for video/movie production.)

...now, there is a little truth to what you say about vibration, but
the "problem" is the driver -- me. :-) It's a sports car, with the
requisite stiff suspension, that I will willingly, cautiously take
on jeep trails. I take that thing places people won't go with a 4x4.
On semi-maintained dirt roads, I'm hell-on-wheels. :-)

>
>Gentlemen, ham radio is going down the tubes. You can quote me on
>that.

I get that feeling too, but I'm not sure it's accurate. The logical part of me can come up with enough reasons to make me not sure:

First, the introduction of FRS and GMRS radios has made decent, free communications available to people that have never had it before. Almost everyone knows how expensive cellular can be, and a nearly free to use handheld communications device has value to almost anyone. I'd be willing to bet FRS is an intro for people to ham, and I think it sets an important precedent for setting aside UHF bandwidth for non-commercial use.

Second, I don't see the HF bands as being valuable enough to cut up. I could be wrong, but I can't see all these different countries agreeing on how they'd be used, which would be a mess if different countries interfered with each other.

Finally, I see amateur as being more useful in countries where internet access is expensive, or in remote locations. I can't see satellite based systems as being inexpensive enough for personal/hobby use anytime soon.

>
>We have people whining about 5 wpm cw. Ye gods, any reasonable
>person can reach that level in one day.

Doesn't it seem strange that no one complains much about having to take a test, that most people also would have to study for?

I plan on taking the general code test within the next few months, yet I know I have no desire to ever use code. I'm not angry about that, I just chalk it up to having to pay lip service to the "old guys", as you often have to when becoming a part of any organized group. I understand the arguments for code, and have quite a few friends that love the mode, but it's still seems silly to me. Amateur radio is a hobby. Why would I want to use code if I don't find it enjoyable? (rhetorical)

>

>codes have not interest in ham radio either. Hf or Vhf
>
OK, but which part of ham radio? You mean more than simply
using one. Experimentation? For those who are just getting
into vhf radio, even using a repeater is experimentation.
How far they can talk, and how the terrain effects their
signals is experimentation. Contesting? Now this is
something I just don't understand. Again, I have friends
that love to contest. It's a challenge to them, and they're
good at it. They have file cabinets full of QSL cards, and
I think that's great. But to me, well, I can send a
thousand messages a minute from my computer, to anywhere I
want. I don't see the point. Rag Chewing? Now this is
where the contest friends of mine roll their eyes. They
don't understand it. Yet the 2M people sometimes do. They
like talking with a truck driver passing through the area,
or a family looking for directions. (Hey, now that does
sound like CB, doesn't it?) But unlike CB I don't hear the
arguments. At least in this area, everyone seems like a
friendly, warm bunch. Emergency Communications? I haven't
met anyone in this area that wouldn't want to help out with
emergencies. And the young, able bodied ones are very often
no-code techs.

>
>This isn't really meant to be hostile. People who aren't fond of cw
>aren't going to use it. They don't wind up on the HF bands (heck,

I'll agree with the first statement, but I think I'd have a
lot of fun with SSB, as well as playing with PSK. And I'm
pretty sure I can figure both out...

>

I hope not. I like the hobby.

I wonder what would happen if all the energy and stress
currently spend defending code were spend exploring and
promoting digital HF modes that were more efficient than
code.

Oh I bet I make LOTS of friends with this one....

This is what amazes me the most about this newsgroup.. We started this thread talking about a new radio with a really good price, maybe a couple of suggestions thrown in for improvement, and then all the crap starts flowing about licensing, upgrading, to code or not to code...

Why can't we stick to the main topic!! If you guys want to start blasting off your opinions about code or upgrading or attitudes of old timers in this hobby then start your own thread!! Don't ruin a perfectly interesting thread about a new radio with your constant sniveling..

Back to the main topic now.. I'm glad Radio Shack is coming out with a new 10 meter rig and I agree that it would be decent if they'd come out with a decent multi-band rig. Maybe it'll finally bring down the cost of some of those other rigs on the market.. I own 4 radios from radio shack and a lot of people bash them pretty hard about thier "sales droids" but, I'm perfectly happy with the rigs.. I don't buy things based on what a salesman says anyway.. And they're really easy to find. I agree with the one post that stated it would bring more novices and no coders further along in the hobby because it's very hard to justify spending $400 and up for a radio just to work ten meters..

Stay on the topic, take your whining somewhere else..

Nuff said..

OK, I'll bite. I'm going to get yelled at anyway, for my
other post. Plus I love analogies.

I think of the US welfare system, in general terms, as a
system of stealing money from those who have jobs, and
giving it to people that don't want jobs, so that they can
buy beer and cigarettes. With no-code hams, I can't see how
anything is being taken from the with-code hams. In fact,
it seems to me that every ham is a benifit to every other
ham, in a country where decisions are based more on opinion
polls than logic. More hams, more votes.

I like the analogy of the guys that love/loved steam
locomotives. Had a wonderfull friend that was one of these
guys. To him, the 'death of steam' was the death of trains,
even though it was clearly inevitable. I see the same thing
with code. To those that hold it dear, it seems to be more
of a passion than anything else. Myself, I would hate to
live in a world of steam locomotives.

Will I take the code test? Sure. Will I like code? Of
course not. Why would I? Will I hold a resentment to the
code people later? Probably a little, but no more than any
other person that enters a group that defends it's opinions
with a largely emotional, largely "well, that's the way we
used to do it" argument. It's tempered with a realization
that they probably just don't know any better. A group of
people in a declining hobby, that pokes fun of those that

want to join them? I don't know if that's sad, or just silly. If it's by people that are old enough that they don't really care if ham radio is around twenty years from now, then it's despicable, but I can't believe many hams could be that mean spririted.

In my area we have a mix of no-code's and HF people using the local 2m repeaters. From what I can tell, the no-codes are every bit as friendly and responsible as the HF people. There also isn't any friction that I can detect between the two 'groups', as there should be if the pro-code people were right. It's nothing like CB used to be, and may still be in some places.

My suggestion: (as if anyone will hear it)

Two written tests. One to give access to all of general, the other to open it up to the extra ranges. Keep the three code speed tests, as options, as a 'gate' to allow access to short calls. This gives the old time HF people their 'props', while also encouraging people to use HF.

Does that mean we're "giving" people something that their elders didn't have. Sure. But who cares? I sure don't.

3977. Re: Rotor with mast pass through

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-19 00:00:00 UTC
From: Roger Halstead <rdhalste@tm.net>
Message-ID: <5pLu3.2275$Ss6.213074@newshog.newsread.com>
Source record: 101034

I've done that in the past, but I need the height.
The last set of guys will be at 91 feet with the tri-bander about a foot above the top of the tower at 98 feet. I could ring mount, or side mount one array that way and cover almost any station I'd be looking for.

That still leaves the UHF/VHF array and Tri-bander which I still want to turn independently. I'd eventually like to remotely control the rotors for both the tribander and the UHF/VHF array from the car. Mobile on 10 with an antenna at 100 feet. (sounds good, even if I never do get it finished)

I have three mounting plates and three thrust bearings.
Even with the TV array side mounted I still need to work out something for the HF antenna which looks like it'll be a sprocket fitted over the outer mast which will be held in place via the thrust bearing.

I can use a double chain and make a cover that will keep all the moving parts out of the weather. Tensioning can be either by moving the rotor, or more easily by adding an idler. Using something like the Ham-M or even larger only requires making a mounting plate that will extend out the side of the tower about 8 inches.

I have one of the Wilson monsters that weighs 40# for the rotor. The big problem with it is the cable required. I'd have to look up the specs, but I think it's something like 12 conductor (or more) It looks to be capable of turning more than the 45-G could support.

I finished digging the hole for the base (3' dia X 5' deep) Mighty good exercise. I think my waist is now about one or two inches smaller. <LOL>
It was hot while I was doing that digging. Now I have to get the guy anchor holes dug. The anchors are going to get complicated as they have to be elevated which means making/welding fixtures that will be anchored in about 1 to 2 yards of concrete and the guy connections will be from 10-12 feet off the ground.
This takes a pair of piers and some pretty good sized pipe with more than a little welding.

The idea is to replace a 90 foot American Steel with a 97 foot Rohn 45-G. Kinda like comparing apples and oranges. The current tower has a pair of side mounted UHF antennas, a tribander at the top and a VHF/UHF TV antenna on a mast above that. The 2 meter and 450 antenna is side mounted.

I've been getting just a bit nervous looking down 90 feet of that skinny 30 year old tower while sitting astride the tri-bander working on the antennas above.

BTW one of the locals has a 100 foot Rohn 25 G used, but in good shape, for sale if some one is interested in a smaller tower. He's asking $20 per

section.
Contact N8NGQ for that.

>I'd be willing to bet FRS is an intro for people to ham,

I disagree!!!

The FRS is starting to look a lot like a UHF version of 11 meters. I have seen already to many requests from people about how to modify a FRS radio to add external antennas and power amplifiers too. I guess a half watt max isn't enough to keep track of each other at the park, ball game or shopping mall, they assume they should be able to talk with their friend(s) 10 to 20 miles across town too! The FRS was created for VERY SHORT RANGE COMMUNICATIONS ONLY, but try to tell that to some kid who is sick of the crap on the CB 11 meter band. He figures he can talk to his Good-Buddies, across town if he had a little more power and a better antenna.

Since the FRS is just a short ways above the Ham 70cm band, it may not be too long before the FCC pulls the plug on Ham band 70cm amplifiers so the FRSer's can't use them illegally. It's the exact same thing that happen with the CB 11 meter band and the Ham 10 meter band amplifiers.

I have also seen far too many businesses using FRS radios, because there're cheap, instead of getting a license for a GMRS radio. I think the FCC should pull the plug on the FRS before it gets totally out of control like 11 meters has.

For your info jack ass.... I'm a ham radio person too ..... But it is people like you that make me ashamed to admit it.

This may be hard to believe, but I've met more C.B.'ers with more class, style, & brains, than I've seen Hams. After all...go to any hamfest....the dorkest looking people there are old timers that that never leave the tub radio and key...except for a hamfest ...so the can buy more C.B. Stuff and scanners.

Why would a Ham Radio Operator need a Henry 2K, 5K, or a 10K amp ?? why do they even make a HF amp that does more than 1500 watts ?

How many Hams do you think ownes these amp...and run them over the limit ?

What about the 20 meter band ....Now there's a fine example of such refined radio operators known as Ham Radio Operators.....

I don't know where to start on this one. I feel like a
comedian the day after Clinton makes a speech. Too many
targets, too little time. I'll just rattle off the first
few points that come to mind.

Why does a discussion about no-code degrade into a slam of
CBers? Lack of a decent argument, or just a desire to
recite a bunch of random dogmatic expressions? A need to
artificially elevate the status of ham ratio at the expense
of another group of people that conveniently, probably
aren't even listening?

I can accept a lot of arguments to support the code tests,
but improving your own opinion of yourself by using it as a
status symbol seems like a pretty lame one to me.

I can respect someone that takes the time and effort to
argue a point they feel strongly about. I can even
understand someone becoming passionate enough about a cause
to become angry about it. But it's tough to take someone
seriously that just makes noise without saying anything.

I even wonder if maybe these couple of posts are from a
no-code proponent that just wants to make the pro-code
people look like a bunch of idiots. In any event, the
effect is to make hams look bad. Maybe that was the goal -
if so I suppose it was a smart move.

As to CB:

1. A couple of days ago I was listening in on a discussion
of the "good old days" of CB radio. Bunch of friendly guys
talking it over, comparing notes of who they'd kept track
of, who they'd lost track of, who was the clown of the
group, etc. The discussion was on a 2 meter repeater.
About half of the people involved were extra class hams.
All were a decent bunch of guys, and it goes without saying
that none were doing much slamming of CB radio.

2. A few years ago I had the fun of driving from Upstate NY to Maryland, then west over the Cumberland Mountains. I'd left the radio on in the truck, on Ch 19 of course, and it had been dead quiet for hours. Climbing up in the left of two lanes, the old Blazer I was in had a bit of trouble keeping up to speed, so I pulled in to the right, behind a tractor trailer, to give another truck some room behind me. I figured he took longer to wind up, and it looked like he was gaining on me. I heard a "thanks!" on the otherwise dead radio, almost jumped out of my seat. I'd forgotten it was on.

I'm not saying CB people are saints, I've heard more than a couple of jerks on the air in my lifetime. But that's a lousy reason to jump all over CB'ers. There are jerks on ham radio too. This discussion is proof, if you believe they're hams! There are more than a few CB people who listen to the radios, and help out people passing through the area with directions, or whatever, or just like to talk with each other. Who cares why? Maybe they don't need to belong to an 'elite' group.

3. As a kid, I remember listening to the CB while driving, listening to a carload of hams going to a regional disaster to help out. They were looking for directions. I remember being impressed with the respect given to the hams by the CB people. "These must be a great bunch, hams, to deserve such treatment.", I thought.

That's the reputation that hams have, in many peoples minds. A group of people, maybe a little geeky, maybe not, that dedicates their time and money to help out in disasters. A group that explores and enjoys technology, and that welcomes people into the hobby. A group that promoted good will by talking to 'regular people' in other countries, well before the invention of the Internet, and well before the close of the cold war.

'splain to me how yelling back and forth helps this image.

The people that are screwing up ham radio aren't the no-code people, and they aren't the pro-code people. It's the idiots that can't keep their emotions in check well enough to keep from fighting each other. You think that some corporate guy that wants bandwidth, that's reading all this code/no-code crap isn't grinning ear to ear?

How can anybody (and I'm not picking on any one person here) be so simultaneously narrow minded and short sighted, and yet still survive in day to day life? It boggles the mind.

There's a old saying that only an idiot argues with the wind. If the death of CW is inevitable, and I'm not saying

it is, does it make any sense to defend it at the cost of amateur radio in general? At the cost of alliterating new hams?

Just random thoughts

Hi All,
I am trying to find the model number of an
analogue H.F. receiver made in the late 70`s
early 80`s by Radio Shack/Realistic.
It was definitely a budget affair with about
five switched bands to cover 1.6-30mhz, it had
a bfo to resolve SSB I think and the tuning
display was a sort of horizontal barrel with
the bands and a coarse frequency markings.
It was powered by 12v dc.
When I took the back off of it the main
board inside was a tiny thing in middle
of the casing, I would love to get my
hands on one for old times sake.
Anybody got one hiding in a cupboard ?
Many thanks,
Gary - G7TOK

Then learn the code and quit cryin'. Why do you no-coders think that the world should change for you? You are the reason CB is looked down upon. You say there is no need for code. I say there is, because IT's REQUIRED! It tends to filter out the lids, and I see it's doing it's job by keeping YOU off the HF bands, LID!

I'm done. This was not sent to offend, mebee motivate.

You're right... But also ask why does a ham use a Tokyo 160W high
power amp on FM (2M) to talk to his buddy with a 1W HT when
BOTH are in sight of the repeater tower, and when the guy with
the amp states he can hear the guy with the HT on reverse?

Can you say ASSHOLE??? I'm sure you can! Especially when
the guy with the Tokyo amp was bringing up the repeater in the
state I live, and he was in site of the repeater in the neighboring
state.

CB just plain DOESN'T have a monopoly on idiots. Our slate isn't
so spotless that we should blindly try to toss dung.

Don't blame the Cell phone or Satellite Phone industry for not encrypting and offering us secure conversations.
It is the FBI's and other government agency faults because they want to make sure they can understand what we
are all saying at all times in order to police our nation.
This is why recently, FBI has made a movement to stop all Satellite Phone conversations in the USA, because they
can't intercept our conversations without having their own intercept satellites, and the phone companies don't want the FBI
controlling and intercepting and managing all their phone company satellites.

4006. No Code Is Citizen's Band

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-20 00:00:00 UTC
From: bren.doreck@ac.COM
Message-ID: <862567D3.004BAFAD.00@amrhm1102.ac.com>
Source record: 100713

I don't disagree with the code being a requirement for entry into the HF bands, but I do disagree with the amount that it counts for: 50%. If we are so worried about the code disappearing, keep it, but don't fail interested hams just because they have not interest in code. When I started in ham radio (5 years ago), I had very little interest in CW, but now I do. I started as a no-coder and now am a general class. I didn't want to learn the code and had the same view then as I do now.

One of the arguements that I have heard is that current operators are worried about the 'dumbing down of ham radio'. If this is the case, then one option is to increase the difficulty of the written tests, include more subject about other digital modes, and lower the percentage of what cw counts for. To accomplish this, make the CW requirement count 25%, the theory/procedural written 75%, and to make the written harder publish study guides and NOT the question pools for each level of test.

This thread should really be in rec.radio.amateur.policy, so sorry for taking up the bandwidth.

Well Keith, if you didn't want to offend... I hope you're more on
target
with other aspects of your life!

I'm a ham, I HAVE passed the code, and I will work HARD to have
it removed as a requirement!

If this conflict continues, when the CW requirement goes (and please
notice I say when, not if) there's going to be a backlash. The longer
this conflict goes on, the more it is polarizing the ranks, and the more
it's backlash is going to affect what's eventually done. As it is now,
I personally see the requirement being limited in the next year or
maybe 2, but going out the window in 5.

And when that happens, I see the CW sub-bands being reduced to
a single 'CW' space and probably reduced in size. The longer the
assinine argument continues the smaller the CW space that is
reserved. I really hope that CW isn't relegated to just being one
of many 'alternative' modes, like AM, but if this drags on, I think it
will be. And with no protected subband, there will be little or no
interest in CW except for some esoteric applications like moon
bounce or weak signal work.

The 'CW or die' people are causing their own demise.

I have here, in the origional box with a new mic, new power cord, owner's manual, bracket and hardware, an ADI AR-146 2m Mobile rig. Does 7/25/50 power incriments. 40 memories plus call channel. Teriffic rig! I bought two of these rigs and ended up only needing one of them. This rig has been to Pryme and back and is in top shape. A few scratches around where the bracket goes is the only evidence of use. $150 shipped or will use as part of a trade for 1.2 ghz radio equipment.

In a day where questionable workmanship and a "we don't care" attitudes is all too common, it's nice to see a company strongly bucking this trend. I recently sent my Kenwood TS-530S transceiver to Kenwood Service Center East in Virginia. I have discussed the particular problems with my radio with both service managers Steve and Chuck. Both were extremely knowledgeable, courteous and helpful. (Chuck even took the time to offer me some technical insight on vacuum tubes and on some old Collins equipment I have.) They took my radio in promptly, informed of their findings and went the extra mile to make sure that my radio is in excellent working order. (The previous owner had apparently made some rather gross mods that were best removed.) I can honestly say, I've not dealt with a more professional, customer oriented company. They've certainly earned my business.

How'd you do your conversions? I'd like to convert a cb to 10, if I could buy one cheap enough, but I don't know what models that would work well for conversion. I've thought about looking around for an old crystal controled one, and then just recrystaling it, but... too many projects to chase to do that. Plus, my QTH is in a nice RF hole/valley.

You know, for all that I like to pick on RS (lack of selection for electronic parts, prices, etc), it is really nice to just go down to the corner and buy what I need when I need it, from 9am to 9pm. And the return policy is pretty good.

I'm sure you'll be told, but....

The Uniden chassis as used in the RS TRC-457, 458, and 449 radios
was one of the best t convert to 10M. THere all ALL KINDS of kits
out there to do it, or you can hack it yourself.

One of the conversion companies is CBC International. It stood for
CB City but they shortened it in the ads in QST. I've not dealt with
them, but I've heard they're kind of pricy. However if people keep
going back to them, they must be OK.

One word. The MAJORITY of the conversions to unlock the
clarifier on this rig are TOTAL GARBAGE. If done right, the rig
is still rock stable on tx with no garble at all. But most people
don't do it right. In my case, I pulled the TX feed to the on-board
pot off, and modified the RX feed to the clarify to get power from
the regulated PLL (I think it was 8v) supply. This kept the PLL
rock solid during transmit.

I can dig up that mod if you really want it. Just DON'T try to use
a clarifier mod that takes power anywhere else!

Hi Shawn,
AM is not taboo it is a voice or phone mode but is much wider
than SSB or CW. For that reason AM is not widely in use especially in
todays crowded bands. On ten meter, AM is reserved around 29.000 by
agreement, also on 160 and 75 meter you will find groups that use AM.
Personally I think AM sounds richer and fuller with the right
filtering. This fullness is what makes it a bandwidth " Road Hog ".
Three SSB signals can fit in an AM space and many more CW signals can be
used in the same. Maybe digitally compressed AM would work but would it
be AM?

Hi Derf
I think you might have a BAD microphone. I use the same model with a
Kenwood TS-570S with the mike volume at only half level and everything is
perfect. Try to borrow another microphone. Good luck.

I'm not aware of Kenwood supplying a had mike with any of their HF rigs. There was none with the T-599, TS-520, TS-180, or TS-940. I have not purchased a '950, so I can't say with certainty, but I can't recall seeing a hand mike in any of the adverts.

Does your mike have a Kenwood label?

I have a newer TS-950SDX and the little Kenwood hand mic that came with
it works fine. Could be bad mic, could be bad radio, could be cockpit
error, borrow another mic or take your mic over to someone elses house.
I'm ppretty sure the mic will work with any other Kenwood rig, SInce the
mic inputs on all the recent Kenwoods are about the same (they all work
with the MC-60) TS_850, 930, 940, 950, and 570 all can use the same
mic.

Nat: I phased 20-metre homebrew verticals at my old place. They were ground mounted and in actual tests, working the same DX with a friend who had a tribander on a 48-foot tower, worked pretty much as well as his setup. I had a switching network--basically short lengths of coax, total length one-half wavelength--mounted around a rotary switch, one antenna attached to one end of the coax, the other antenna attached to the other end, the wiper of the swith attached to an antenna tuner and the rig. Turning the switch, I could actually null out ground wave from local stations and them receive them long path, complete with auroral flutter. It worked well. Good luck with your project. 73.

Just got my IC706 (G). It seems that when I hit the PTT on FM there is a
little delay
before the stn starts to TX. Also, the listener found that there is a
little delay to open the CTCSS, i.e. the listener receive the signal
from my IC706G and the sound little bit delay. IC

Does anybody know wether it can be adjusted or not ?

Ok fellow "Hams" Here is a good buddy list of ham equipment....this ain't your normal rec.radio.swap "perfect" "9.5" "non-smoker" "Rare" "Prestine"....crap...this a line up of some pretty good stuff.

1. Icom 706 MK II mobile mount detach kit cw filter $1000.00 bucks. Hey the extra stuff with this ain't cheap you know..

2. Kenwood TS130S with cw/ssb filter,ps30 powersupply, vf0130,sp120,mc50,
$650.00 dollars (Hey look at this, it's the whole banana...all the hard work is done...it's all here) This is from when a radio was a real radio!

3. MFJ 989C 3KW Tuner, $200.00 smackers....this handles anything you can put in it. Why get one to small. This one has all the room you'll need to grow!

4. MFJ 784B DSP Filter $125.00 big one's.
Is the woodpecker getting in your RX.
Is that hiss plug'n your ear...
Then this is what you can't live without.

5. Kenwood TR-9000 with astron 7 power supply $325.00 Please un-marked bills! This dude is a great 2m all mode. Easy operation. Good performance.

6. Cushcraft R7000 10-40 vertical $225.00 cold hard money order..
This baby is the king of the HF multi band vert.....great condition....and puts you in a state of easy HF operations
This is the all famous 2m almode...simple usage...great performer.

I don't know where to start on this one. I feel like a
comedian the day after Clinton makes a speech. Too many
targets, too little time. I'll just rattle off the first
few points that come to mind.
Why does a discussion about no-code degrade into a slam of
CBers? Lack of a decent argument, or just a desire to
recite a bunch of random dogmatic expressions? A need to
artificially elevate the status of ham ratio at the expense
of another group of people that conveniently, probably
aren't even listening?
I can accept a lot of arguments to support the code tests,
but improving your own opinion of yourself by using it as a
status symbol seems like a pretty lame one to me.
I can respect someone that takes the time and effort to
argue a point they feel strongly about. I can even
understand someone becoming passionate enough about a cause
to become angry about it. But it's tough to take someone
seriously that just makes noise without saying anything.
I even wonder if maybe these couple of posts are from a
no-code proponent that just wants to make the pro-code
people look like a bunch of idiots. In any event, the
effect is to make hams look bad. Maybe that was the goal -
if so I suppose it was a smart move.
As to CB:
1. A couple of days ago I was listening in on a discussion
of the "good old days" of CB radio. Bunch of friendly guys
talking it over, comparing notes of who they'd kept track
of, who they'd lost track of, who was the clown of the
group, etc. The discussion was on a 2 meter repeater.
About half of the people involved were extra class hams.
All were a decent bunch of guys, and it goes without saying

that none were doing much slamming of CB radio.
2. A few years ago I had the fun of driving from Upstate NY to Maryland, then west over the Cumberland Mountains. I'd left the radio on in the truck, on Ch 19 of course, and it had been dead quiet for hours. Climbing up in the left of two lanes, the old Blazer I was in had a bit of trouble keeping up to speed, so I pulled in to the right, behind a tractor trailer, to give another truck some room behind me. I figured he took longer to wind up, and it looked like he was gaining on me. I heard a "thanks!" on the otherwise dead radio, almost jumped out of my seat. I'd forgotten it was on.
I'm not saying CB people are saints, I've heard more than a couple of jerks on the air in my lifetime. But that's a lousy reason to jump all over CB'ers. There are jerks on ham radio too. This discussion is proof, if you believe they're hams! There are more than a few CB people who listen to the radios, and help out people passing through the area with directions, or whatever, or just like to talk with each other. Who cares why? Maybe they don't need to belong to an 'elite' group.
3. As a kid, I remember listening to the CB while driving, listening to a carload of hams going to a regional disaster to help out. They were looking for directions. I remember being impressed with the respect given to the hams by the CB people. "These must be a great bunch, hams, to deserve such treatment.", I thought.
That's the reputation that hams have, in many peoples minds. A group of people, maybe a little geeky, maybe not, that dedicates their time and money to help out in disasters. A group that explores and enjoys technology, and that welcomes people into the hobby. A group that promoted good will by talking to 'regular people' in other countries, well before the invention of the Internet, and well before the close of the cold war.
'splain to me how yelling back and forth helps this image. The people that are screwing up ham radio aren't the no-code people, and they aren't the pro-code people. It's the idiots that can't keep their emotions in check well enough to keep from fighting each other. You think that some corporate guy that wants bandwidth, that's reading all this code/no-code crap isn't grinning ear to ear?
How can anybody (and I'm not picking on any one person here) be so simultaneously narrow minded and short sighted, and yet still survive in day to day life? It boggles the mind. There's a old saying that only an idiot argues with the wind. If the death of CW is inevitable, and I'm not saying it is, does it make any sense to defend it at the cost of amateur radio in general? At the cost of alliterating new hams?

Just random thoughts

> What is the best (and most inexpensive) design for filtering out
> alternator/ignition noise

Danny,

You didn't say how you have it hooked up. The ground can be a
significant source of trouble. First, experiment with the location of the
ground connection. If you go directly to the battery, it may remove all
the whine. In fact the first choice should be to connect BOTH connections
of the mobile to the battery - directly. Using the sig lighter socket is
risky for this reason.

I've always wondered if I just could try to recrystal a cb to 10, and explore w/AM. Of course, it wouldn't take much to get the radio to recieve SSB, I don't think, if a BFO (455kHz) was placed next to the radio (the cheap and easy way to make shortwave recievers receive ssb).

Anyhow, I have no plans to put AM on the Novice portion anytime soon. I was just wondering if it was "ok". Thanks.

Shawn-

I'm not aware of any prohibition of the use of AM in any part of Ten Meters where SSB is allowed. However, I haven't been keeping up with the rules. There may be an AM prohibition, just as there is a lower power limit for the Novice/Tech Plus frequencies.

As a practical matter, few people would want to use AM in the predominately SSB areas of Ten Meters. Even if it is permitted, an AM receiver usually has quite a wide IF filter, capable of receiving several SSB stations at the same time. SSB sounds terrible on an AM receiver, and would cause considerable interference to an AM signal unless it was extremely strong.

Before phone was allowed below 28.5 MHz, SSB operation.was concentrated between 28.5 and 28.8 MHz, and many of us "die-hard" AM operators were concentrated around 29 MHz. Consequently many modified AM CB sets still exist, that were converted to work around 29 MHz and above. Today, you will still hear AM activity in that region when the band is open. Since the Novice/Tech Plus license doesn't allow operation in that region, you might say AM is taboo for them!

These amps can run 100 percent duty cycle at reduced power where as many of the "legal limit" amplifiers can't. Also running at way below Max power the IMD performance can be greatly improved.

Also some of these amplifiers are not used JUST for ham radio use. In some parts of the world these amplifiers are used for regular short wave broadcasting by stations that don't have the money to buy the high end gear or custom designed equipment.

>

You are right Mike, there never is a monopoly on idiots anywhere.

The point that was missed is the Ham Radio operator
has a legal right to use an amplifier when "he/she feels it is necessary"
to complete his/her communication. The rules do not specify what
quality of contact is required to justify the use of an amplifier. The
choice of when to use an amplifier is left to the station operator per
FCC Part 97 rules. Sometimes many of use don't agree with their choice.
The CB radio operator, however, has no legal right to use an amplifier
per FCC Part 95 rules, but many of them do so anyway, sometimes because
they want to be "channel control", for example, in the area 1 or 2 miles
around
their QTH.

I had a similar experience with Kenwood, East. The solved a long standing (since manufacture) problem with my radio, returned it promptly, and took care of it under warranty. All in all a great experience (and when I was all ready for a fight). It restored my faith in Kenwood.

I have a new never used Yeasu G-450XL antenna rotor with the optional
Yeasu GC-038 mast clamp and 125ft of heavy duty 5 conductor rotor cable.
I had intentions of installing a uhf and vhf beam which never
materialized.
This equipment is new.

Well said. I don't think CW will die out any too soon.
As I've said before this isn't about code it's about exclusive
use of the HF bands. I think the band is big enough to
allow phone and CW to coexist even if a few more hams
are allowed access. Just because they are allowed access
doesn't mean they will start talking without at least putting
out the effort to get a rig and antenna, etc. After all we all
have access to K band, yet it's still not over crowded.
I have two HF radios and an isoloop, a TS-830 and one in
my FT-847. Both have mics, can't use either one.
I haven't been able to master the code. Yes it pisses me off,
but I agree with you that insulting others does very little to
further any cause. 73 K4BGA Bobby

==========
I have a 950SDX, and the audio from the original hand mic is
superb i'm told. I only have to set the mic gain at 9 O'clock with the
hand mic, or my MC-60A. I also have the MC-90 DSP mic, and even though
I get excellent audio reports with it, I don't like to use it, as I
have to turn the mic gain up to about 3 O'clock to get a decent ALC
level. I think your problem is the mic---try and borrow another 8 pin
Kenwood mic from someone, and see if it works.

This is what the radio looks like.
We have sold this radio off and on over the last year.
It is an OK radio, good SSB, OK on AM and FM.
It's not as good as the old HTX-100 was, but it
isn't bad at $150.00...

Now it is a CB as far as quality goes, and low end CB at that.
Very close to a Uniden made PC-122XL in design of the main board,
but that is where the similarity ends.

I am sure my two licensed (General/Advanced) nephews (both pre-teen) would appreciate being thought of as "Old-Timers". They saw the code test as a challenge and a part of the pioneering spirit that makes Amateur Radio great. By the way, there has been more than one "Life or Death" situations that have depended on code because the bands were filled with so much Voice congestion that they could not get an SOS to be recognized. CW does have its place in ham radio, just as voice, digital and any other mode that comes along. Granted, there are better means of communications than Spark Gap and it was through pioneering efforts that these means came to light. We can all be proud of what came before. If you tend to ridicule the past, it only makes you smaller in the present.

Correct. The code steps and licensing steps were set down to provide motivation for users to upgrade. Pass the written and the code, you get additional privileges. Don't want to take the code? Get on GMR, CB or stay in the No-Code Tech end of the pool.

Our club members hold informal CW nets over 2 Meters. A few of them have MFJ multimode controllers and can run MCW on FM. It sounds really great and provides some good training. One of the young girls in our club just got her Extra at the last testing session. She had taken the code for Extra about a dozen times, but she kept after it. She is really proud of it. I know how she feels. I got my Extra in 1979 (I think) and I still like working code on 6 meters. Some of the DXpedition, you can only work them on code because the signal is so weak.

Also in review is more Code Only bands like 30 meters. These have some definite advantages and are well used. I heard a rumor (rumor only) that there was some problem with people running a lot of 2 meter CW all over the band, including hitting some of the input frequencies and output frequencies of repeaters. That, I feel, is a little irresponsible if they continued after they were notified. Like I said, only a rumor. Have you heard of any outcome on that?

No, actually, I never wrote any such thing. What I wrote was more like.

CITIZENS BAND IS NO CODE or some derivation and added.

nuff said.

It appears that someone has plagiarized me to a great extent. I posted it (apparently misguidedly) as something cute I had seen on a bumper in the HRO parking lot.

Geez, there are a lot of thin skinned people out there. Lighten up folks. Life is too short and the DX bands are open. Enjoy them. The Ham Family is by and large one of many communications oriented Families. Each has its good and bad eggs. I am a public service nut. RACES and Civil Defense when I was in High School and now ARES and working as a V.E. There is room enough out there for everyone and the system has always had its way of weeding out problems. If they open up No Code in each band (except 30 meters which they can't), it will be set up similar to what it is now. Generals have a portion for phone, Advanced have a bigger portion for phone and Extras, typically have the largest portion for phone along with the bottom of each band for CW. Part of the reasoning behind this is to provide a spectrum to learn etiquette and technique and to loosen up a bit. Working your first DX station tends to tighten the throat for some. You soon discover that there are better contacts on the lower frequencies and become self motivated to acquire privileges for those frequencies. It is tough running contests with 25KHz of space with 800,000 other people in your ears! Maybe not that bad, but it will be crowded. The playing field will level eventually and then there will be another outcry of injustice over some other trivial matter that means nothing at all in the grand scheme of things.

'nuff said

Actually, there was a character on the 40 meter band that was really loathsome, but he was eventually dealt with by enough determined fellow hams and the proper authorities.

As for power, I spend most of my time running 5 watts or less from my apartment so I do not interfere with the cable television viewing of my neighbors. A non responsive cable company is one reason for this. It seems that around ten watts gets into their systems and if you drive around with a sniffer (which the club does) you can find it leaking like a sieve. Nice closed system operating on amateur frequencies.

4073. Ebay and Sales to Non-Hams

I have never sold amateur radio equipment to a non-ham before.
I recently got a bid on a PK232 controller from a non-ham. Maybe I
shouldn't be concerned about this, but I am wondering what he is
going to do with it? I know that some CBers use them on the chicken
band (highly illegal). I would be even more concerned were it HF
or VHF gear.

What is the general feeling about this? Should I refrain from selling
to a non-ham? What would be the impact with Ebay if I refused?
Interesting can of worms I am opening.

Actually, Part 97 states that operators should only use that power required for reliable two way communications. Quite a lot of us run the rigs backed off a long way. I don't care for a 59 +60dB signal report. It is flattering and ego building for some, but it means I am running a heck of lot more power than I need to for communications.

Scott,
For monitoring your transmit SSB or CW envelope all you have to do is connect the SM-220 in line with your coax (preferably to a dummy load <g>.) Ditto for using the tone generator...just wire a cable with a mic connector on one end and a mini-phone plug to the SM-220. I use this to make sure my processor is set properly (for the few times I actually use it), independent of whatever mic I am using.
The only problem is if you want to monitor *received* signals (to see how much those big guns are splattering!) The SM-220 manual gives instructions for wiring up aTS-820S and a 520S. My 940S has an external connector. Other radios will surely work, but you have to get into the IF output circuitry.

Sure:

Start with an FT1000 then add these features:

* BPF-1 Bandpadd Filter Module
* TCXO-1 High Stability Master Reference Oscillator
* XF-C 2.4 KHz filter
* XF-D 2.0 KHz filter
* XF-E 500 Khz filter

I also added the XF-F 250 Hz filter to mine.

Scott,

I use an SM-220 (with the BS-8 panadaptor) with my TS-850, and
everything works fine. It's not an exact match in style and color for
the 850, but it works fine, and it doesn't look out of place next to the
850. It's certainly much cheaper at current used prices than a new or
used SM-230.

4089. Radio HELP!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-21 00:00:00 UTC
From: nathan_c_harris@worldnet.att.net
Message-ID: <37c12289.28056392@netnews.worldnet.att.net>
Source record: 100541

I have to replace the LCD in my HT Alinco DJ-G5 and I have the replacement LCD and the LCD rubbers (they are what the LCD sits on and are what are actually attached to the board). Anyway, when I was disassembling the radio the LCD was firmly attached to the rubbers (which have a conductive center) but neither the LCD nor the rubbers came with any type of adhesive! So is there some kind of conductive adhesive out there for me to use or what?!?

Any, ANY help is greatly appreciated.

Nate

I would like to submit my resounded second to that. This is a NG for
adults run and read by adults. So can we all please act accordingly?

Nate take a good look at that rubber Rod.
you will see that it is constructed with a series of bands or for a lack of better picture out of a stack of washers, the washers alternate one conductive the next insulating ETC. this allows it to make contact only between the surfaces directly above and below each other. to use conductive adhesive would defeat the purpose.
Good luck with your repair.
Don

When i first got my ham ticket the big thing was the dam C.B.ers why we were blamed for every
thing from Q.R.M, to sun spots, being bad, impregnating women, All of this was done by- what we were to call REAL HAMS you know with a <W> call's. It got better for i while but now their
is a new thing to hate and it wont stop so good luck.The biggest shot i fired was when i got my
extra class call that really burned some of them up mostly the ones that didn't have the extra.

I think CW plays a very important role in many people's lives, and
will for a long time to come. Be it good or bad, CW will always
separate one group from another. There will always be those people who
will try their best to make you do away with CW because they dont like
it and don't see any need for it. We, of course, know the many
benefits of CW. Besides, without it, all the birds would be running
wild in the streets.
wait a minute - we are talking about Chicken Wire, right?

Thanks for your input Keith. I know that some Radius models are programed for a lot of their features, but I think on the P-50 the deviation is adjustable.

>are all saying at all times in order to police our nation.

The FBI and other law enforcement agencies can (with a court order)
tap any telephone call at the centra office, where the traffic is in
the clear. They have no legal need to get it off the air as you
suggest. You'll note that digital cellular systems such as GSM *are*
encrypted, which handily disproves your theory.

The reason analog cellular is not encrypted is plain and simple:
COST. Back in the late 70s when the first AMPS systems were being
designed, the technology of the time was not up to the task of
digitizing and encrypting cellular radio transmissions, at least not
at a price consumers could afford (remember that back then a cellular
radiotelephone cost upwards of $1000). The cellular radio providers
had a choice: deploy now, with an unencrypted analog system, and start
raking in the bucks, or wait 5-10 years until digital encryption
technology became affordable. You already know which choice they made.

Once there was an installed base, significant changes were also too
costly to implement (imagine the bean counters at Cellular One
approving the expenditure to replace each and every customer's
cellular radio phone with a new digital unit). This is why the
cellular industry lobbied long and hard for BS legislation like the
ECPA; it was cheaper to pay for lobbyists and congresscritters than it
was to replace the analog system with an encrypted digital one.

Fortunately, the original decision to only allow two analog cellular
carriers in each market forced anyone else who wanted a piece of the
pie to develop an entirely different system. Fortuntely for us
consumers, the newcomers had better technology to work with and could
offer reasonable security and privacy at reasonable prices.

My 2 month old FT-2600 is at Yaesu for repairs. The hot mic problem, but also more serious issues concerning lock-ups during scanning and "reboots" during transmitting which reset all of my programming. I have a FT-2500 on loan and think it is a much more solid radio.

It's not about a legal need. In order for the police to tap
a phone, they have to have to work with "civilians" . In
the US, anyway, the police don't view themselves as
civilians. Civilians are a separate group. The feds don't
like to have to deal with another group, by pulling cellular
out of the air they don't have to.

(If they were truly not "civilians", then they wouldn't be
allowed to run around with loaded weapons in any civilized
society, IMHO.)

They don't have a concept for invation of privacy being
immoral. They see "protection" as more important than
freedom. It's a mindset. Sad part is that many people
agree with them. "Think of the children!" they chant. "To
hell with our children's children", they should be thinking.

The other thing they've wanted is the ability to pull
telephone call routing information from the carriers,
without court order, without any intervention or knowledge
by the telcos. In their view it's not unconstitutional to
track who called whom. (And it probably unfortunately
isn't.)

The fact that this technique is just about, if not more effective than codebreaking for military use doesn't even occur to them in the context of being a bad thing. It's a way around the intent of the law, which to them is a good thing.

Just random thoughts

We have two of 'em, and they are worth the money, my wife and daughter
, myself go to the Malls, and when I run out of gas, it is nice to set
down and still know where they are. When we are ready to leave, there
is NOT ALL THAT LOOKING AROUND for one another. So for that they are
perfect. From my base (440 at about 50feet) the range is about 4
miles. That is talking inside a mobil, so that is not bad. They will
"work" some repeaters, but they run out of audio pretty quick. I asked
alot of operators before I bought them , and there was very little
input. I hope this helps.. to my way of thinking , they have been the
best money I have spent on wts. 'just my nickel' Chuck Lorentson

4124. No Code? Who Cares?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-21 00:00:00 UTC
From: arongv@aol.com
Message-ID: <19990821021321.24747.00001582@ng-cj1.aol.com>
Source record: 100608

I don't normally jump into subjects such as this, but this time I can't resist.

First, every mode ought to be given its due. CW isn't as hard as many make it out to be, but this much is fact: young people have little trouble learning the code. It's a function of their unique language learning ability, just as they can master foreign languages in grade school and junior high.

The older we get, the harder it is to learn a language, and CW definitely is a language. Trouble is, unlike most languages we hear, CW only comes close to the communications of whales and dolphins, ergo, it is alien to us: squeeks and squeels!

But, once we set about "learning" the code, most stop with translating characters. We don't think this way, and we certainly don't talk this way: H-----E----L----L----O. Instead, we push the sounds together and form a word, almost as one continuous sound.

The key to learning the code, unless you're unusually bright, is to anticipate the coming sounds (coded characters) and see if they're spelling words. When you start the first sessions, you use a pencil and paper. And as you start to write the letters down, you slow the whole process down by (1) translating each and every coded letter, and (2) writing it down. Both take time to do.

You start to improve your code speed when you look at what you're writing down and see that you know the word before it's finished! And the moment you learn that "trick," you're on the way to improving your code speed dramatically. In the following paragraphs, see how often you know the coming words before you get to them! It's anticipation!

When you get into the 13-15 words per minute range, that's the time to put the pencil down and copy the code in your head, anticipating words before they are finished. At that point, you are "thinking" code.

Aha! Say you can't think in code? Then why is it that you can send words in CW you've not written down?

No one ever said learning the code is easy. It's not that a lot of guys are "dumb" and just "can't get it." It's first a mindset, and secondly the way you look at and train yourself to hear code as a language.

For those who think CW is for old foggies like me (51 years on CW, varying between handkey, bug and MFJ-422), you need to tune into the DX CW contests, or try Field Day. Typically, every night I check out 20 Meters late at night, I hear a couple of Pacific Rim stations on SSB. But down low in the CW portion, I hear several stations QSOing. Typically, late at night, the ratio is 8 to 9 DX CW signals to 4 or 5 SSB signals.

I'm proud to have spent most of my life QSOing almost strictly on CW, but I don't think technically CW is any "better" than AM, FM, SSB, RTTY, etc. It's a choice.

Bottom line as I see it is that today, most hams don't understand how to troubleshoot or repair their SS black boxes. So, the definition of what is a Ham is changing, because when I started, it was assumed that if you couldn't buy a rig, by golly you could build one!

The newer generations of hams generally don't care about the history of the hobby, and that means the ham personality has changed. It's a black box, almost impossible to maintain/troubleshoot personally, so the "craft" aspect of being a ham is disappearing.

That being so, why not ditch other dimensions of our history in favor of No Code. Or putting it another way, aren't we honestly just becoming black box operators?

And, the closer we get to just being black box operators, the closer we get to looking like CBers. When you ask yourself what the real difference is between us and them, does it come down to knowledge and communications skills?

On a parting note, the Bachelor of Arts programs in our colleges have forever required a foreign language. I liken the BA degree to the old ham license, when you should be required to know a little about a lot of things. Start chipping away at the degree and you change the meaning of the degree. Overhaul the license requirements and you change the meaning of the license.

As a hobby today, we're a lot closer to CBers than most of us would care to admit.

Ron Merrell W0OIZ (Yep, an old CW fart!)

Dentron MT2000 legal limit antenna tuner, very good condition. $150.00 Plus shipping

National NC-46 Receiver, Excellent condition inside, Repainted cabinet is so..so,
with manual $100.00 plus shipping

SBE 6 tube linear base amplifier, uses six 6LQ6 tubes, 15-80 meters
Easy 600 watts peak output $250.00 plus shipping

Johnson Viking Mdl 1 AM/CW transmitter, plate modulated 6146's
good condition with manual $150.00 plus shipping, pick up in So. Cal. $150.00

Alan CTE RMS watt meter, 10/100/1000 watts $25.00

Uniden Force, commercial 36 channel mobile transceiver, tuned and programmed for 6 meters, With spare Eproms and manual $140.00 plus shipping

Siltronics Mdl 90 VFO, -6 model, very good condition $60.00 Plus shipping

Siltronics, 1011C transceiver with manual, Not tested, receives $100.00 Plus shipping

ElectroVoice 664 desk mic, beautiful desk mic $100.00 Plus shipping Sold

Yaesu FT101EE, great condition, original NEC tubes working to full output, Stock mic, AC/DC cord, Manual $320.00 Plus shipping

Yaesu FL2100B amplifier, 10-80 meters, Uses a pair of 572Bs, Great condition, Full output, Manual $380.00 Plus shipping Sold

Gonset GSB-101 amplifier, Uses three 811 tubes, Clean condition,
with manual $225.00 Pick up in SO. Cal

JAZZ, 1Gb SCSI Drive, New In Box with one cartridge (New), cable manual, mounting kit etc. $150.00 Shipped SOLD

Home Brew 10 meter amplifier, Uses three 24 volt version of the 6146 tube, Made from a military PA deck, Homebrew supply, open chassis construction, RF sensing, Meter, Bias adjust, plate/load controls etc. $100.00 Plus shipping

Messenger 250 Classic 23 channel 11 meter radio, 50th anniversary, Brown and gold
beautiful radio with Box, $60.00 SOLD

Amplifier, 10 meter, General Linear System PA deck using two 6LQ6s driving one 3-500Z, This is a 2 Peice amplifier mounted in what looks like a 3 drawer night stand, I call it the "Furniture Amplifier" Very unique $350.00 Pick up in So. Cal.

Tram D201, Good condition, Great AM, weak SSB, Maybe a tube, Manual $210.00

McCormick Commercial mobile radio, programmed with 16 packet frequencies, 40 watts output, great receive, AEA PK88 with manual, Both $170.00 plus shipping

6LQ6 Pulls, good output $20.00 Each

Abandoned Browning MKIII project, 2 receivers, 2 transmitters, One receiver works great, the other fair, New Nuvistors in both receivers, was in the process of making one good transmitter from the two, One transmitter missing knobs and the eagle. SAMs Service Manual, Pick up in So. Ca. area $300.00

Cobra 19 plus with Turner new Turner clone hand power mic $50.00

Uniden Force UHF Desktop repeater, 40 watts, with Uniden COR and PL Board.Currently on 446.875/441.875, with complete manuals and schematics.
Cellwave 6 cavity flat pack Duplexer
MCC RC1000 Full feature controller, Auto patch, CW ID, Remote Base Many programmable feature from your handheld. With manual
Uniden Force 6 Meter Commercial, programmed with 30+ six meter simplex and repeater freqs, spare Eproms, Manual
Radio Shack HTX404 UHF handheld, With manual, Battery packs and charger
Complete package $750.00

All Items shipped upon receipt of MO, Personal checks will need to clear before shippment. References available, Delivered UPS ground or Priority mail.

I agree. But I think CW's current importance is overrated.
CW certainly has value, as does RTTY, packet, SSB, FM, and
the newer digital modes, but it doesn't have the importance
that it used to. Mainstream military does not use CW.
Primary SOS communications from aircraft and ships has been
replaced by satellite systems, and while I've read of
accounts of emergency communications via ham radio, they now
mostly seem to be SSB.

I also feel that CW is holding back other modes that could
be much more efficient, in terms of power and bandwidth,
than CW.

The requirement seems arbitrary and artificial, or
nostalgic. Nostalgia's great, I happen to have a fondness
for late model P-51 Mustangs and command line interfaces,
but it's a hell of a way to run a railroad, IMHO.

>required for reliable two way communications

That's what is says all right. However it is still left up to the station operator(s) what
"reliable two way communications" means. For some people I have seen posting,
that would be running 1 watt and having the operator on the other end run all his
DSP gear and still requesting the sending station to repeat everything five times.
Or, another operator would just fire-up the amplifier, have a nice QSO and be done
with it. It all depends on the operator(s) definition of "reliable two way communications".
Your definition probably doesn't match someone else's all the time I would guess.

being
>a ham is disappearing.

Working on PC boards using tiny surface mounted components is a real pain.
Without proper tools and or a lot of experience it is way to easy to
screw-up
a circuit board. At least, if the shop screws it up they have to fix it.

>And, the closer we get to just being black box operators, the closer we get
to
>looking like CBers.

With the joke of the written test(s) that anyone can rote-memorize their way
through
using the "study guides" and the open question pools, it sure looks that
way.

Talking about the exams and open questions pools stirs up the pot almost as
fast as
the Code / No Code issue.

There was a real long thread on this point a while back on the rrap news
group. I
don't really care to comment about further here.

4129. ICOM 735 MARS modification question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-21 00:00:00 UTC
From: Les Hall <hdsl@bellsouth.net>
Message-ID: <37BE58E2.C9622492@bellsouth.net>
Source record: 100613

Hi,

Can you tell me how to modify the ICOM 735 units for
transmit on non-HAM frequencies? I am using these
units for a short-range telemetry application and would
like to modify them for transmit at 1 MHz to 30 MHz.
This is an experimental application and the ICOM 735
units provide an inexpensive solution for initial prototyping
of our product.

Thanks in advance for your advice in this matter. Any
information regarding related FCC regulations would also
be appreciated. Please send a copy your response to
hdsl@bellsouth.net.

This TR-4C station is in very good looking and good working condition.
All original and on the air. 8.5+ out of 10. Comes with a good copy of
the manual. The receiver is very sensitive on all bands and the
transmitter sounds good using three 6JB6 in the output. Just plug in the
mic and you are on the air with full output 80 through 10M.
$325+shipping
I have jpgs available if interested. 73 Chris VE3NGW/W4 Florida

From: Carl Schulz <meteu@mailbag.com>
Message-ID: <7plo8s$m8o$1@grandprime.binc.net>
Source record: 100616

I am looking to start in 6 Meter operation. I want to get a ssb rig for operation but am having trouble finding one I can afford. I found an all mode HF/6 meter Alinco rig but it's almost $800 and I can't use the HF bands.

Can anyone recomend a decent 6 meter rig? New is better if it's not expensive but I think an older used rig may work best. I just need imput. I know a few hams but none have worked 6 meter.

thanks,
Carl

Test Equipment FS:

Keithley 169 Digital Multimeter, Lab type, but powered
by 6 "C" cells, so can be used in the field, if desired.
Nice large LCD display. $ 125

Heath low voltage power supply. It is the Heath IP-27. It is a
low voltage power supply, fully adjustable from about 0.5 Volts to 50
Volts. It also has current limiting that is built in and adjustable
from a couple ma up to 1.5 amps. There is also a nice large meter for
measuring current or voltage. The supply is "floating", so can be
used for either plus or minus supplies. It is the "Heath Brown"
color. Manual included. $100

Prices do not include shipping from Florida.

E-mail to W8EK@fdt.net

Thanks.

>so widely accepted. Because of the additional inspection and quality
>control required by ISO you can be darn well certain that our
>manufacturing process is indeed a good one, at least as good as any of
>the other two-way companies making ham gear.

Well, the primary reason for ISO 9000 compliance is that
some government contracts require it of their contractors,
and their subcontractors. It is a paperwork exercise, which
can lead to improvements in product *consistency*, if it is
actually rigorously followed on the shop floor. But the problem
is that it can lead to production of a consistently bad product
as easily as it can a consistently good one. ISO doesn't
differentiate in that regard. In other words, if you produce a
product where every unit fails in exactly the same way as
every other unit, then you've met the ISO standard.

The real problem with ISO compliance is that it makes it
difficult to improve processes, or provide running changes
to a product based on feedback from the field. Any significant
change in process requires the entire operation be recertified,
and that's expensive. So the usual result is to stagnate and
freeze product at the level it was when the ISO certification
was done. In other words, it slows or stops the sort of continuing
product maturation we tend to expect as a result of growing
experience with the product design and its manufacturing
process.

This isn't important with things like SAE fasteners, which
are a mature product based on a mature process. The thing
we want most in that case *is* consistency. But it does impact
products like amateur radios, which by nature tend to be less
mature in design, tend to be released into the field with some

bugs still lurking, and utilize more cutting edge processes in
manufacture.

What we want in that case is a manufacturer who can respond
flexibly, and change processes as needed to improve the product
as experience with it grows. ISO certification often gets in the way
of that. That's not its intent, of course, but it is a practical real world
result in too many cases because management is loathe to pay
for recertification every time the engineers come up with a change
that will improve the product or fix one of its design defects (and
all complex products have them).

TDMA is the standard Bell South chose for their digital cellular systems.
An encryption layer could be added to it, but that isn't required (nor done).
So all your receiver has to be able to do is sort out which time slice belongs
to which phone call, and viola, plain old PCM. That might sound like a daunting
task, but it isn't since the control channel sends the call setup information in the
clear for all phones, ie not that different from the way trunking systems operate.
Otherwise it wouldn't be practical because there'd have to be a unique time slice
reserved for every phone, whether it was making a call or not.

I don't know much about how CDMA systems set up calls, but it seems to
me that call setup has to be in the clear with it also. Otherwise, how could
you roam? Both the phone and the base station have to have a way of
negotiating PN sequences in order to establish the call. That has to be
done in the clear, so it will work with any phone and any base station. So
any receiver monitoring will know what to do to follow the call.

Eric & All,

I have always been happy with Fair Radio. When label something as "works or
may not be within spec" it simply means that they did not bench it to verify
that it met original manufactures specifications but it was found to be
operational.

The company is of high integrity and I would not hesitate to purchase any item
from them and have ben doing so for over 2 decades.

Source record: 100629

The DX-100 is the only one that appears to meet the description.
It was made from '81-'84, had 4 bands, used a horizontal cylinder with
frequency markings, and had a BFO.

Sold new for about $100. Is not rare and sells used for about US$30-$35
(or less).
It was dark in color with a light bezel around the frequency readout in the
center. An s-meter was on the upper left and the speaker took up the right
hand third of the front panel. There were only FOUR bands, but it did
provide continuous coverage from .55Mhz to 30Mhz. It had both a large
course tuning knob and a fine tuning knob. It should work with both 117VAC
and 12VDC. The Radio Shack part number was #20-206.

Amazingly, it appears that RS did not assign model numbers in order. The
best I can find is the following sequence of radios and the date first made.
These were all under the REALISTIC brand. Current models, I believe carry
the RS brand.

DX-75 1965
DX-150 1967
DX-150A 1969
DX-120 1970
DX-150B 1972
DX-160 1975
DX-300 1979 (DIGITAL display!)
DX-100 1981
DX-200 1981
DX-302 1981 (DIGITAL display!)

You might also try marine(boat) supply stores and mail-order. The use of 2 batteries is VERY common in off shore boats so that you don't run down the battery needed to start the motors. They should have devices that will charge both batteries but isolate the 2nd battery from the car's wiring and from the starter.

I'm not a fan of putting the battery in the trunk. Just don't seem safe to me. If it is truly, I mean truly, sealed then it might be okay. But I'm leery of the buildup of gasses in closed/confined areas.

High speed code testing was, in fact, promoted by the ARRL to
artificially
limit the number of hams. That's all well documented in an article at

http://www.nocode.org/articles/filter.html

which describes how the ARRL got Morse test speeds increased for
EXACTLY that purpose (to limit the number of hams). This article
quotes from letters and other documentation researched by (and
obtained from) a Civilian Records Archivist at the National Archives,
Washington, DC.

> Pass the written and the code, you get additional privileges.

Pass the written and not the code, you get nothing.

Pas the code and you get what? Mostly privileges which have
ABSOLUTELY NOTHING to do with Morse code.

> Don't want to take the code? Get on GMR, CB or
> stay in the No-Code Tech end of the pool.

Right ... "let them eat cake." That elitist attitude didn't work
for Marie Antoninette either. The majority rose up in a
revolution which changed the course of French history.

No code/slow code hams are now the majority. (58% and growing)
Fast coded hams are declining in both percentage and absolute
numbers

The world is changing. Ham radio is going to change, for the better,
whether fast-coded old timers like it or not.

(Followups have been directed to rec.radio.amateur.policy,
which will please a certain self-appointed "newsgroup cop" from
Hawaii, I'm sure. :-)

I was told not to anticipate. When I hear a dit, I think of the letter
"e." When I hear dididit, I'm not supposed to jump on the letter "e,"
then ah oh, the letter "i." And if the character being sent is dididit,
I'm not supposed to anticipate e, then i, then s.

OK...my last post on this subject as it seems to have fallen from the "lively discussion" status to the "less than meaningful drivel" status.
I can appericate the folks that do code. They are keeping alive a skill that needs to be preserved. I can also appericate the folks (like myself) who chose the no-code route. I personally got my ticket for the public service aspect of the hobby. I was a vol. firefighter at the time and we (vol. fire dept.) had the skywarn duties for the county.
Now I live in a large metro area and haven't yet joined the skywarn group here but I plan too soon.

The point I'm trying to make is that we all have our own reasons we took the time and effort to obtain our licenses. We share a honorable past and a bright future. We can get along...we just have to be open to some change. This hobby has always been an expermenters dream... we can experment with new modes, new types of equipment, and new rules. If anything new doesn't work out...we can always go back and change it. There are very FEW things about this hobby written in stone. That's what can make it so much fun.

Many of the older hams in our club have also told me the best way to learn
code is to learn words, I haven't yet figured out how to learn words
without
recognizing letters. FFFF too means something, unless you first learned
other base numbering systems you can't obviously see this is 65,535.
The code requirement does keep a lot of people off HF, including phone.
I know many other engineers that can and do design radio equipment.
Almost all of the new hams in this group are no code techs. We just aren't
interested in working CW enough at this time to grind at learning code.
Generally except for club field day events we pretty much have nothing to
do with HF because of the code requirement.
These are the guys using new DDS and DSP chips, heck even I can put
a SSB modulator in the space of your little finger nail. I also organize 12

or so hams (old and new) from the club to support the March of Dimes
Walk-a-thon (and other events) using our 2m and repeater.
You can reach us on VHF and UHF, find us on satellite, or packet anytime,
but you won't talk to us on HF. Where do you think the future of HF and
ham radio lays ? 73 K4BGA Bobby

Since you normally know what will be asked for on any CW exam, you can short cut or short hand what you write down. I copy words, and use the shortened form when copying. Things like: I fl fn. For I Feel Fine. I envy those that know shorthand (the wife) as they can copy code, translate to English and translate to shorthand for copying. I use a keyboard since I can do around 50 to 60 mistakes..er...words a minute. At my 20 wpm exam, I used my abbreviated shorthand and went back after the test and filled in all of the missing letters and numbers. Never leave out the punctuation. I passed the written with a question or two to spare, but I had them check the copy and I had over three and a half minutes of solid copy on the longest stretch. I had misspelled a couple of words that I had shorthanded and filled in. Oh well. It worked for me and some others I have assisted, but it doesn't work

for everyone.

After a while, you tend to do it naturally. You probably already recognize the sound of CQ without really decoding the individual dits and dahs.

All of us started learning code by counting dits and dahs and then writing a letter. After that, you recognize the rhythm of the letter, not so much how many dits or dahs it has. As you copying speed increases (usually through on the air contacts and regular practice) you start recognizing words as the patters become more and more familiar. The mind is a wonderful instrument and for most of us, it works as it should. However, there are some out there that are not capable. One of the no-code Techs in our club in Texas (older gentleman about 70) had an incessant ringing in his ears from have his skull crushed when he was younger. Permanent tinitis. When he listened to code, all he heard was one long tone. I got together with the other V.E.s and a friend of ours cut a 13 wpm tape that was two-tone. One tone for dits and the other for dahs. He has his advanced now and doesn't plan to upgrade further.

One of the things I love about Amateur Radio is that there is something in it for everyone at every level of licensing. Like my wife, she only wanted to have 2 meter capability in the car so we could coordinate with each other with our busy schedules. We both had hour long commutes, coming from different directions. She is not fond of the code either, but after 4 years now, she is starting to get interested. It took 17 years together before she got her Tech! I don't do a lot of HF, as I am a 6 meter enthusiast. Don't need

anything higher than a no-code Tech there. However, when I was first licensed, I got on HF in the Novice CW portions and enjoyed myself. I found it frustrating that the good DX was on 20 meters, so I upgraded to Tech and a month later to General. Then I learned that some really good stuff was just out of band in the Advanced portion... well, you get the idea. I wanted to work anywhere and everywhere, so I kept upgrading so that I could. Now days, there seems to be a feeling that because the ranks are filled to the majority with no-code Techs, that no-code should be the standard for all bands. I voted for the No-Code Tech proposal because the reasoning behind it was to allow Technically qualified individuals that wished to contribute to the Amateur Radio growth and experimentation were what was needed to keep the ranks fresh with ideas (DSP and other technologies came out of this). Of course, you get some chaff with the wheat with whatever plan you utilize. Now the chaff wants it all after contributing nearly nothing but a body to the swelling ranks. Swelling ranks is good for representation, but it needs better direction.

MFJ makes a 6 meter ssb rig for $250 -- you could look at it at their
web site -- but I couldn't tell you how good it is.

Kenwood also has a 6 meter-only rig, but it's going to be in the
$800, $900 range.

Only problem with buying a used 6 meter rig now is that, because we're
going through the sunspot 11-year maximum, such rigs are commanding
premium prices.

At this time, you don't need much power -- a few watts will hit your
local fm repeaters, and a few watts ssb or cw will work all over the
world during band openings.

OK - maybe I've been around too long, but I'll bite...

Please educate me on some of those modes "more efficient in terms of power and bandwidth than CW" (keep in mind that CW has *ZERO* bandwidth, for starters...)

For SOME unexplainable reason *I* can't think of any...

AND, for the record, I'm NOT a CW lover, but I DID pass 20 WPM in front of an FCC inspector in San Francisco back in the late '60's - and it didn't kill me - tho' it DID give me a sense of pride and accomplishment I STILL carry with me - guess I'm a bit mentally unbalanced... By *today's* standards...

Hi Carl. MFJ has a 6m SSB/CW radio for $250. Suppose to be a pretty
good rig. I hear a lot of them on the air when 6m is open, and they l
sound good on the air. It has analog tuning, and is a basic radio
without a lot of "bells and whistles As most modern radios do, it
requires a 13.8 volt dc power supply. The rig puts aout 10-12 watts,
so a large supply is not needed. Once in a while AES will have one of
these rigs used for about $169. Another option that is a little more
expensive is the Yaesu FT-690R MKII. This is a 6m all mode mobile.
Used ones go for around $350 to $500. They have digital tuning, and a
few more "bells and whistles", including an optional battery pack that
allows portable operation at 2 watts (normal output is 25 watts if I
am not mistaken). Just a couple of ideas for you. I suggest that
you do as much research as you can before buying any radio.
Good Luck.

Hello,
My hand held recently broke & I am looking to replace it. I saw an ad for
an Alinco DJ 190TD and was wondering if it was worth getting. It was priced
for $100.00. I have a couple of questions:

1) Does the antenna have a BNC connector or some non-standard connector?

2) How do you enter frequencies? It does not seem to have a keyboard!

3) Can you download frequencies from a computer interface?

Thanks in advance for the help!

Hi Bob,
For what it's worth, from an old-timer--

There are many legitimate reasons for using a PK232 that have nothing to do with hamming--just as there are many legitimate, non-ham reasons for using a microphone. Would you hesitate to sell a D-104 to a non-ham? This is not like selling an RF amp. In that case, there are NO legitimate non-ham reasons for wanting one! I'd have no ethical problem selling the PK232; it doesn't radiate RF. But I'd never sell an amp to a non-ham.

Don't know if that helps, but it's a position a lot of us came to a long time ago, when CB first came on the scene. Vy 73, Jan N0JR

Way back before I was licenced, I bought a TH-215 and MFJ TNC-2
Copying packet was a large part of the motivation to get my licence.
The final push came from the W6FXN repeater, which had a net that even
non-hams could participate in, by calling certain hams to get their
questions asked. One of SPN group is now very active in NCI.

I was SOO happy to finally take the TX-lock off that rig! :) :) :) :)

Now I'm president of the local club, maintaining three repeaters and an APRS
digi, teaching ham classes, and working with the county EOC to provide storm
spotting and severe weather support. (The short list)

Hello, I have a Radio Shack HT, the 202, in great condx. It covers 144.00 through 148.00 FM, and is not modifiable. It is a back up radio to my kenwood. It comes with:

*Mic
*HT desk stand (homemade)
* (2) 7.2V 1700Mah Nicad batteries about 1 year old. Great condition.
*Quick charger (also included is the original wall transformer/charger)
*2 Antennas

This would make an excellent starter radio for a beginning ham. I will ship FedEx to your doorstep in ConUs for $150. Reason for selling. A little short on cash and need to buy the girlfriend an engagement ring. If interested you can reach me in Albany, NY at 518-383-8655 or kb2qqm@email.msn.com

> power and bandwidth than CW" (keep in mind that CW has *ZERO*
> bandwidth, for starters...)

Bzzzzt!!!! Wrong answer!!! You obviously NEED some education.
CW does NOT have "*ZERO* bandwidth.
(And you're an "Extra" ??? You tell us below that you passed the
20 wpm beeping test ... how'd you pass the written???)

Back to Morse having "*ZERO*" bandwidth ... Far from it ... and in
terms of bits/sec/Hz, its performance is rather poor.

Plus OOK Morse suffers from poor coding charateristics (non-uniform
symbols, not "vully voiced," etc.) such that it's at least ~9 dB worse
than
even simple BFSK in terms of weak signal performance at equal symbol
rates.

Other modulation techiques can do MUCH better than OOK Morse.

One of the more recent examples is PSK31 ... which does 50 wpm
in ~ 30 Hz bw ... far less than even ideally shaped OOK Morse.

> For SOME unexplainable reason *I* can't think of any...
(and you're an "Extra" ??? You tell us below that you passed the 20
wpm
beeping test ... how'd you pass the written???)

> AND, for the record, I'm NOT a CW lover, but I DID pass 20 WPM in
> front of an FCC inspector in San Francisco back in the late '60's -
> and it didn't kill me - tho' it DID give me a sense of pride and
> accomplishment I STILL carry with me - guess I'm a bit mentally
> unbalanced... By *today's* standards...

Yea, I guess so ... it would make a lot more sense to have a sense
of pride at passing the written test (if you knew simple facts like
NO modulation has *ZERO* bandwidth) ... instead, Morse is
the "defining skill of your ham career" ??? No WONDER the
ARS is in such sad shape.

> Gary - KJ6Q
> --
> "Blaming guns for Columbine is like blaming

Ahem, there really aren't any technical discussions on this NG - its
either FS or FA here, regardless of the official reason for this NG.

As far as the stupid threads go, you can thank an Extra and an Advanced
class licensee for leading the charge up Stupid Hill with their Tech
bashing.

Now that we have yet another stupid thread, I'm curious why you comment
on the posts about no code and CB, but not the Tech bashing.

4207. Stupid Knwd SM-2xx Station Monitor question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-21 00:00:00 UTC
From: nx7u@primenet.com
Message-ID: <37be102d.12263253@news.primenet.com>
Source record: 100836

I have a TS-850S.
All I really want is the monitor and two-tone generator functions of the station monitor (I don't care about the "pan adapter" function). The SM-230 has that function built in; probably contributing to it's pretty steep price.
The SM-220 is much more reasonable, but "made" for TS-520 etc...
Question: how so? Any real reason I couldn't use an SM-220 with my TS-850S for the uses described?

Thanks in advance,

It doesn't even need to be the radio spectrum :). I have a computer and a fast modem nowadays.
Phone lines have bandwidth too you know. Thta's why I love using Packet Radio, it requires me
to use my computer+the radio spectrum.

Source record: 100352

Hello. I'm in the market for a new HF amp and am wondering what advice any of you might have for one. I would prefer a tube amp in the range of $400-$700 that will do 1000w-1500w on SSB/CW and 500w-800w on AM/RTTY. I have considered the Dentron MLA-2500, the ClippertonL, and a Drake R-7 or R-4 but I'm wondering what you guys think. I also need the amp to work from 160m-10m with the WARC if possible. Thanks a lot for reading and let me know if you have any suggestions.

Hello. I�m considering buying a Kenwood TS-940SAT for HF contesting and have a few questions about it. I need the radio to be compatible with a computer for logging purposes etc. I�m wondering, how easy is it to connect one of these radios to a computer? Is it simply "plug and play" like the FT-1000MP or do I have to add components to the inside of the radio? And also, does the radio have a built in voice keyer and/or a built in CW Memory keyer? Or will I have to get external ones? Any help would be appreciated. Thanks again, and let me know if you can be any help.

Not sure if this means anything but an AH-2 works fine with the Alinco
DX70t, just have to change the plug!

One thing that everyone seems to be overlooking in all of this is that neither the FCC nor the U.S. can decide by themselves to change the licensing structure without considering the ITU and the policies which guide operation of radio equipment within our region of the world and the effects such a restructure would have upon international agreements which are set forth for collateral licensing.

BOOOM!!! I don't think we will see no-code portions in the other bands until the U.S. decides to begin another period of isolationism.

Sorry....

Yet most countries are scaling back code speed due to anticipation :). Even I favor 5 wpm till such change is enacted.

Nat,
You need :
IF-10B Interface
RS-232 Level Translator
The rig is great, but it does not have a built in voice keyer or CW memory keyer (not even a regular CW electronic keyer....hey, it was built over 10 years ago <g>)
However, most of the logging and contest software (CT) out there does have PC-keboard CW capabilities....

As I said in another response ... keying *IS* modulation ... 100% AM
with something approaching a square wave pulse shape. Thus it creates
sidebands ... but you can read the details in the other post.

> > However, an unmodulated carrier wave is also pretty damned

> original width!
>
> WHAT IS *that* width?

Man, you're doing some SERIOUS backpedaling here, aren't you?
You referred first to a "CW signal's bandwidth" ... which by
convention
in ham radio means an OOK Morse code signal ...
And the "accompanying/attached sidebands" COME from the carrier,
taking their power from it in the modulation process.

> YOU keep talking, and adding SIDEBANDS, while *I* am talking CARRIER
> *ALONE*!
>
> And YOU call ME dense... sheesh!

I don't recall using the term "dense" in reference to you, but now
that YOU bring it up I find myself hard-pressed to argue with
you on that subject.

You clearly weren't "talking about the carrier alone" you were
talking about Morse code transmissions and their bandwidth.
Having been caught with your pants down, now you try to
change the game and divert attention from your errors.

> > Keying *IS* modulation ... it's 100% AM with something close
> > to a square wave pulse shape. It DOES create sidebands at the

> > frequency of the pulse rate and multiples thereof.
>
> YES - *subbands* that are ADDED to the carrier, NOT a required part
OF
> the carrier!

Actually, you mean "sidebands" not "subbands" ... and they aren't
exactly added to the carrier they are derived from it in the
modulation
process.

> SSB is comprised of audio-frequency sidebands, wher ONE
> sideband AND the unwanted carrier are REMOVED - so the CARRIER
itself
> is independent and SEPARATE from the *sidebands*... At least as my
> limited intellect understands it...

If you insist on describing yourself in such glowing terms, who am
I to argue? Just remember that they are YOUR terms, not mine.

The carrier is NOT "independent and separate from the sidebands.
The sidebands are the product of modulating the carrier with the
baseband signal. The fact that they can be separated by filtering
or phasing techniques does not break the intimate relation between
them, it only modifies the composite spectrum which results from the
basic modulation process in a useful way.

> "information" with...

That 20 Hz only exists for the "PARIS" example with keying rise/fall
times
as specified above. Since most transmitters are more in line with the
5 ms
rise/fall times recommended by the ARRL, the bandwidth is wider.
Also,
as pointed out, your string of dits would have more transitions and
therefore
more bandwidth than the "PARIS" example.

> > However, a string of dits of the same dit length would have a

> > to the ARRL chart.
>
> How did we make the quantum leap from *5* to 50 wpm?

For several reasons ... first, you asked for an example of
something that's more efficient than Morse ... PSK21 is a
prime example ... and it runs at 50 wpm. That WPM rate
also happens to be the example which correlates to the
ARRL's 5ms rise/fall recommendation. If you pay attention,
it all fits together in a logical fashion and makes sense.

> > > And for the REST of the hair-splitters, the original premise of

in
> the face of overall bandwidths not that dissimilar

You seem to have missed the fact that PSK31 is about 7.333 times
more bandwidth efficient than OOK Morse ... 50 wpm at ~30 Hz
for PSK31 vs. 220 Hz for 50 wpm Morse (with optimum keying
pulse shape).

Gary ... I appologize for being "abrasive" ... your attitude
as I perceived it, coupled with the "No Code Is CB" thread
tone rubbed me the wrong way. I've gotten to the point
where I have a rather low threshold of tolerance for being
told that "No Code is CB" by folks who make obvious,
glaringly incorrect technical assertions in the same breath.

That said ...

The "leap" to 50 wpm was to compare Morse to PSK31 at
equal wpm rates ... the techniques of PSK31 could just as
easily be scaled back to 5 wpm and the required bandwidth
would be about 3 Hz instead of 50 wpm PSK's ~30 Hz,
compared to the "idealized" 20 Hz for 5wpm Morse "PARIS"
transmissions. That's still about a 7:1 advantage for PSK and
that's not "as good as it can get."

The other point I tried to make is that that 20 Hz b/w for 5 wpm
is only achievable with a particular (38 ms) keying rise/fall time
and, with the faster (more like 5 ms) keying rise/fall times of
typical
transmitters, the bandwidth can easily be well beyond 100 Hz ...
even at 5 wpm. Considering that, the advantage for 5 wpm PSK
over (non-ideally-shaped) 5 wpm Morse could be closer to 30:1.

If that sort of performance gain doesn't impress you and get your
attention, I don't know what could.

Again, I appolgize for "going off on you."

Hi all,
I just got a HX241U at the hamfest in Greenville. It looks just like my HX240U without the keypad. I thought it would program the same except that when I opened it I couldn't find the program switch. Can anyone tell me how to program this radio so I can put it on the ham bands? How different it is from the 240?

Thanks,
Jim McGhee N5FZT

==========
Hi Terry,

I own an auto repair shop, and have a house account with a few
Ford vans with 2 batteries. Ford has a very simple way of charging
both batteries at the same time, and only having the auxillary battery
to supply any loads when the ignition is off. They have a SPST relay
that connects the positive side of both batteries together when the
ignition is in the run position. The relay coil is only energized
when the key is in the run position, not the start or accessory
position. I'm sure that you can find at least 1 terminal on your fuse
block that meets this criteria--possibly one that is labeled fused
ignition. This way, when the engine is running, both batteries are
being charged, and when the ignition is in the off, start, or
accessory position, the batteries are isolated from each other. You'll
need a relay with a decent current capacity---Try a Ford dealer--Get
tha relay that they use for this purpose. . If you wire it up this
way, you eliminate the isolator, and any ripping up of the alternator
wiring.

Good Luck

> spam free email form at www.xmission.com\~kdiehl

The other replies were fine, but an additional bit of info may be of use to you. The 1000 will do everything the 1000D will do EXCEPT that the sub unit will only work properly on the band that the main unit is tuned to. It will receive off band, but will be at reduced sensitivity and/or selectivity, depending on the antenna switching scheme one has programmed. The addition of the sub unit filter will allow complete freedom for the sub unit. One additional note. The FT-1000D is fully NTIA (vice FCC) compliant for those who will be using the transceiver for MARS, CAP, etc. owing to the TCXO being installed. The TCXO may, as you know, be installed easily in the 1000.

Can you believe these three popular filters going for only $23 on Ebay? 8
hours left!
Ok they are not the cleanest or mint-est but they are usually hidden behind the
desk, right?
Drake TV-3300-LP, Drake TV-1000-Lp, and a B&W.
Anyway Gents, heres the link, well worth the time to look!

First impression would be to get a used radio. I wouldn't do that, mainly because the technology would, of course, be a few years old in a used radio. A 2 meter FM mobile radio is pretty cheap new these days. AES (www.aesham.com) has the Kenwood TS-261 for about $190. Add an antenna for $35-40 dollars and you are in business. If you can afford more for a dual band 'set' (BTW: Hams call 'em 'rigs'- part of the 'secret handshake stuff' you need to know ;)), covering 2 meter and 440, you will have more to work with and also have the public service bands to listen to (and lots of 'em can do things like AM reception for aircraft, etc. if you are into that sort of thing.) and be interesting.

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling 1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped) for 1 to 10 issues. If you are interested in over 10 issues or the entire collection, make me an offer. I am willing to ship anywhere on this planet so long as you are willing to pay the actual shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Dec $1.00 ea.
1994 Jan - Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea.
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.

>
> When you said "CW" it was obvious that you were talking
> about OOK Morse (which people generally refer to as "CW").

Agreed... In fact, I had ALSO eventually supplied an example -
repeated below... tho my original statement was related to the carrier
width itself, free of induced or included transients... The discussion
THEN slid to variables of keying speeds and signal impurities...

>
> An "unmodulated carrier wave's bandwidth" would depend on
> its spectal purity ... phase noise, synthesizer reference spurs,
> etc. IF you want to pick nits.

For purposes of simplicity, let's assume a 100% pure (keyed) carrier -
after all this IS pretty much a theoretical exercise...

>
> However, an unmodulated carrier wave is also pretty damned
> useless ... if it's unmodulated, it carries no information, thus
> all it is is a potential interferor. (But an "Extra" should know
> THAT, too.)

AHHhh - the inevitable inane, juvenile and thoroughly pointless
INSULT!

BZZZZZT!

YOU lose... And by the way, "useful information" in the face of
emergency or difficult conditions MAY be as simple as a carrier keyed
by touching two wires together at extremely SLOW rates - why assume we
are talking about something up at the 60 wpm speeds? The intended
ISSUE was the CARRIER and its width, NOT the keying speed or
impurities!

>
> As soon as you modulate it (and keying it on and off is
> 100% AM with something approximating a square wave)
> you introduce sidebands and the bandwidth is definitely
> non-zero ... in fact, if you soften the edges of OOK Morse

> keying too much it makes it harder for humans to copy,
> though it reduces the levels of the higher order sidebands
> as you depart more and more from a true square wave.

A LOT of techno-babble static - but STILL an obvious evasion of fact, or even the SLIGHTEST attempt at a real-world example of this "CW bandwidth" under discussion...

Here, I'll REPEAT the parameters I suggested earlier (you must have missed that post...)

A string of "dits" produced on 7 mhz at a keying speed of 5 WPM - pure carrier... What's the horrendous bandwidth?

THEN, in keeping with what this sub-thread was REALLY about, perhaps you can educate me (stupid Extra that you insist I am...) with the modes of alternate communication that are LESS bandwidth and MORE efficient in communication ability than that example above, "horrendous bandwidth" and all...

You see, my original "error" was based on the fact that we were talking about 2 different things - MY comment on "zero bandwidth" was related to that pure carrier only, and without the included transients possibly provided by extraneous products such as power supply ripple, phase shifts, etc., after all these are all VARIABLES, and it's as elusive to accurately state those bandwidths as it is to flatly state an AM signal is 6 khz wide... it ISN'T, unless it's modulated, and THEN its actual instantaneous bandwidth is determined by the modulating frequency. Sorry to include still more "Extra class" nonsense... And yeah, I know a steady state carrier ISN'T an AM signal until it's modulated...

After all, I come from the dark ages of ham radio, before all the enlightenment of today's golden era... Back in THOSE days, it was pretty much understood that a steady (pure) CW - OR unmodulated AM carrier was of "zero bandwidth".

>
> > I'll wait for your expert reply...
>
> You just got it. I'm still unimpressed by your grasp of the
> basic principles of radio communications.

As *I* am with your steadfast INability to respond free of insult, and with absense of the simple example I have have requested *TWICE*!

HERE, I'll repeat it AGAIN:

"A string of "dits" produced on 7 mhz at a keying speed of 5 WPM - pure carrier... What's the bandwidth?"

NOW, will you dazzle us with MORE tap dancing and insult, or provide a REAL answer?

Should *I* now point to YOUR obvious evasion and poor powers of comprehension in the face of a clearly outlined set of parameters - especially sad in view of all those vast qualifications you so proudly display to impress others, below your sig?

NAH - why stoop to your level - the ISSUE is a technical one, NOT a personal one... Pity your insecurity compells you to make it otherwise...

I will now await your reply to my CLEARLY outlined question - but will not respond further, for unlike you, personal slurs and insults in the face of relatively simple topics is NOT my main source of enjoyment in these threads.

regards...

What's a REAL ham? You're not going to start another NoCode vs. Code debate are you?
Amateur Radio would be nearing extinction if it weren't for the Codeless Technician Class implemented in '91. An exaggeration? Maybe a slight one, but it's a fact that the Codeless Technician class did spark renewed interest in a once dwindling hobby.

This is the ONLY response you'll get from me. I'm cut my part of the thread.

MORE accurately, *keying* the carrier will produce
ACCOMPANYING/ATTACHED sidebands, increasing bandwidh at a rate
dependent upon keying speeds - the carrier ITSELF remains at its
original width!

WHAT IS *that* width?

> >
> > JEEZE, and *I* thought "modulation" was that phenomena that caused
> the

AHHH - the juvenile insult AGAIN! - at least we see ONE example where
your "expertise" truly excells!

TOO bad you MISSED the part that specified:

">>but that the PURE CARRIER, by
> > itself ALONE"

YOU keep talking, and adding SIDEBANDS, while *I* am talking CARRIER
ALONE!

And YOU call ME dense... sheesh!

>
> Keying *IS* modulation ... it's 100% AM with something close
> to a square wave pulse shape. It DOES create sidebands at the
> frequency of the pulse rate and multiples thereof.

YES - *subbands* that are ADDED to the carrier, NOT a required part OF the carrier! SSB is comprised of audio-frequency sidebands, wher ONE sideband AND the unwanted carrier are REMOVED - so the CARRIER itself is independent and SEPARATE from the *sidebands*... At least as my limited intellect understands it...

The reason
> that keying is "shaped" in rise/fall times is to "round off the edges"
> of the keying square wave to cause the higher order sidebands
> caused by the harmonics of the fundamental keying rate to fall
> off more rapidly than they would if the keying waveform was a

> the occupied bandwidth is about 20 Hz according to the nomograph
> in the ARRL handbook.

AHHH - you *FINALLY* come up with the requested information! What TOOK you so long? AND we NOW find that horrendous total bandwidth, CARRIER *plus* induced sidebands, is 20 hz!

Sure a LOT of work, over a miserable *20 hz* to compel you to the degree of slur and insult you seemingly need to embellish your "information" with...

>
> However, a string of dits of the same dit length would have a wider
> bandwidth because of the increased frequency of transitions.
>
> Also, if you use the ARRL's "recommended" rise/fall time of 5 ms.

AHHH! finally some GOOD information, FREE of demeaning insult - see,
you CAN do it if you REALLY try!

STILL, in terms of overall system simplicity and efficiency - even in
the face of overall bandwidths not that dissimilar - a simple battery
powered one transistor CW transmitter can be fashioned and placed into
operation WITHOUT the vast supporting systems required by the newer
technology - making the basic "chopped wireless" a potentially more
effective mode for many of the world's poorer classes. YEAH, I realize
this is NOT what this post was meant to address - just an
observation...

Thanks to all that responded. It appears that the FT1000 I was looking
at was optioned up to "D" configuration so, in my case, there no
longer is a difference. I bought it!

Alinco DJ-580, 1-2 years old, Used, Excellent Condition
$205.00/OBO

Other

Description:
Dualband Tranceiver

This unit is a must buy because:
1)It is in mint condition. It has minimal usage. It has been looking at me for the last several months and asking when it was going to get an owner that wanted to use him.
2)Has expanded aircraft receive enabled.
3)Lots of goodies: DTMF squelch, full duplex and cross band repeater funtctions, compact size, etc... etc...
4)Shipping Charge varies according to payment method ie.,credit card is a little extra

Shipping:
Item is located in: Berkeley, CA 94704

Buyer pays shipping

Estimated Shipping: $25

Sales Policy Accepts:

Money order or cashier's check
Credit cards (with use of Billpoint service)

You can get Panasonic gel's from digikey, we use them in
computer UPS's and they're fresh, and pretty well priced.

To isolate, track down a continuous duty automotive
solenoid, rated for maybe 5A more than your radios
(ballpark). Feed the power to the solenoid coil from an
accessory terminal on the fuse box, and the power lead to
the relay from the starter solenoid on the battery side.
Naturally, you'll want to use heavy enough cable for this.
Then, feed the radio from the gell cell. Don't forget to
fuse the line coming off the starter solenoid AND the lines
coming off the gell cell. Your biggest danger on this setup
is from shorted wires, or a light duty solenoid designed for
a horn or something.

The advantage is that you don't have any diode voltage drop,
or modifications to your primary charging system except an
added fused line. You can also elect to run the radio from
the car battery and gell combination, if you leave the key
in the ACC position.

Just random thoughts

Let's try reversing that assertion. If CW has zero
bandwidth, the you can put an infinite amount number of
separate CW signals in any given region of the radio
spectrum. Not fair? OK, let's assume a 1Hz bandwidth.
Let's even space the signals a whole bandwidth apart. This
would mean you could put 150 different conversations in a
300Hz bandwidth. But that's not fair! That's not
bandwidth, that's being limited by the receiver!

And that's my point!

You're using CW modulation, demodulating to audio, and
decoding it in your head. With modern radios, you very well
may be processing the demodulated audio with both analog and
digital filters. Doesn't anyone see the irony of using DSP
with Morse code?? From endpoint to endpoint, it's like
using a CATV link to read smoke signals.

Current digital communications generally uses some form of
phase or phase/amplitude modulation. The mode I had in mind
I believe is called PSK, the info I have on it is that it's
a slow speed phase shift key of a continuous carrier. The
advantage is that the effective bandwidth is less than audio
morse, so the background noise level is lowered, and the
demodulator is able to lock onto the continuous signal.
Bottom line, from what I've heard, is that PSK signals that
aren't audible are perfectly readable. It 'cuts through'
the noise better than audio morse.

If it doesn't do that, there has to be something existing, or possible, that will. The same technology that allows transmission of huge amounts of information over 19th century phone technology can be used to transmit more information over the radio than by morse code.

What's happening is that instead of focusing on developing a new digital standard, or set of standards, we're focusing on defending what used to be. Wouldn't it be great if hams brought PSK, or something like it, to the forefront? Wouldn't it be great if we could improve the reliability of HF communications everywhere, push the manufacturers to put the new standard modem in new radios, just as they already have a button for USB, AM, FM. Why isn't there a PSK or a PAM button on any HF radio? I think this is what we should be asking.

"What do we do next?" not "Why do we still do this?"

>For SOME unexplainable reason *I* can't think of any...

I'm not surprised. In the last several years, while computer technology has invaded everything down to blenders and power drills, we are being led by a group that insists that doing DSP in our heads is a good idea. That's what it is!! You're buying an expensive piece of electronic technology that's user interface is BEEPING AT YOU! It would be like buying an adding machine that displayed the output in roman numerals.

Maybe we should keep the code test, but let prospective hams take a DSP equipped computer with them.

This isn't irony, it's sad. Sad that a group that is supposed to be pushing the envelope of technology is hanging on to this with both hands, white knuckled. Sad that this is happening at a time when more people than ever are interested in technology. Hams aren't helping, they're standing by while the world spins by them.

I think that's great. I do. But I don't understand what that has to do with the current code requirement at all. One of the nicer things about the US is that we have a history of asking "why?', instead of just accepting what has been the status quo. That's a pride thing, too.

If you want to put up a barrier, to entice people to
challenge themselves, put up something useful. I don't know
what that is, but in an era of $50 modems, code just annoys
people.

The guy was pretty rude, but technically correct.
Every signal has a greater than zero bandwidth.
Even steady state carriers without any intentional
modulation. If you think about a plain VCO spec'd
at say -90 dBc/Hz at 10 KHz from the carrier,
that is a measure of the 10KHz modulation energy.
It goes up the closer to the carrier you get.
This is for the vco, everything else just increases
the power/bandwidth. If you could get your carrier
to power up in 1 ns, you would momentarily fill
over 1 GHz of bandwidth.
That's basics, real radios have many unintended
emissions that can mix or modulate. Bobby

JEEZE, and *I* thought "modulation" was that phenomena that caused the addition/impression of additiomal waveforms UPON a carrier, CREATING sidebands AND additional bandwidth - but that the PURE CARRIER, by itself ALONE, either steady state OR keyed, was of essentially ZERO bandwidth.

HMMMmm - STILL no clear statement of CW bandwidth - so let's get MORE specific:

A string of "dits" sent on 7 mhz at a code speed of 5 WPM - how much *actual* bandwidth? Sorry, no scientific calculator here, so spit it out in plain hz...

And THEN, with a *straight face*, try to convince us the bandwidth isn't negligible as far as the original intent of my claim of "zero bandwidth" is concerned... Or at least requiring lab equipment outside that found in the VAST majority of hamshacks...

And for the REST of the hair-splitters, the original premise of all this was the claim of "much more efficient modes of communication with LESS bandwidth than CW" - and I *STILL* haven't seen any that fit BOTH qualifications simultaneously! (or otherwise, for that matter...)

You know, I just realized that if the accessory circuit in
your car doesn't kick out during starting, you *might* blow
your fuses. If so, you need a circuit to block the relay
until the alternator comes up to speed. (obviously) Use an
NPN transistor to switch the relay, connect about a 1K
resistor to the base, pull down with a 4K or so resistor,
and pull up with a 12.6V zener diode. The zener fires when
the voltage goes over about 13V, then the NPN, etc.

Unless I've missed something else!

Boy I'm not sure on this, but here it goes anyway.
I think below you will find a little better explaination
of how the bandwidth use compares.

There really isn't an "audio bandwidth" to a CW signal, that
comes from the receiver being tuned the audio tone distance
away from the carrier.
Simply turning a CW signal on and off 50 times a second
will, depending on the rate of change of the carrier power,
fill over 50 Hz of bandwidth at some power level. If you left
the carrier on and changed the phase at a 50 Hz rate you'd
use 50Hz bandwidth but you wouldn't produce the extra
bandwidth filling impulses.
At least that's my take on it, subject to correction.
Bobby

> carrier wave? (or a long dash om CW if you prefer...)

When you said "CW" it was obvious that you were talking
about OOK Morse (which people generally refer to as "CW").

An "unmodulated carrier wave's bandwidth" would depend on
its spectal purity ... phase noise, synthesizer reference spurs,
etc. IF you want to pick nits.

However, an unmodulated carrier wave is also pretty damned
useless ... if it's unmodulated, it carries no information, thus
all it is is a potential interferor. (But an "Extra" should know
THAT, too.)

As soon as you modulate it (and keying it on and off is
100% AM with something approximating a square wave)
you introduce sidebands and the bandwidth is definitely
non-zero ... in fact, if you soften the edges of OOK Morse
keying too much it makes it harder for humans to copy,
though it reduces the levels of the higher order sidebands
as you depart more and more from a true square wave.

> I'll wait for your expert reply...

You just got it. I'm still unimpressed by your grasp of the
basic principles of radio communications.

> The guy was pretty rude, but technically correct.

I guess I'm just tired of people who don't have a clue
about the technical side asserting their "superiority"
on the basis that they can beep real fast.

When an "exhalted Extra" talks down his nose to
me with a bunch of crap that shows he doesn't
even understand the basics, yet tries to tell me
that I (and others like me) are "just CBers" because
we can't/won't/don't care to beep as fast as he
does, it rubs me the wrong way.

Sometimes, I just can't resist "letting them have it"
in hopes that maybe some of them will realize that
there is (and should be) a LOT more to ham radio
than beeping.

Right. But the process generates audio for not just the
desired signal, but any signal in the passband of the
receiver. Thus, the listener has to pick the signal from
any other signals by ear, or by DSP/ear. With an purely
analog radio, you'd maybe have a 300Hz filter for CW. This
means you're going to hear whichever signals are in that
passband. And filter them in your head.

Now, for an electronic device to pick apart multiple signals
based on frequency is no big deal, for people to do it
manually greatly limits the number of channels you can put
into any given space.

So if you design a digital demodulator for CW/morse, you'd
be able to pick up one signal from between two others 50Hz
apart, or at whatever the limit is. And you tell me you can
use DSP to do this, thus making CW/morse even better! OK.
So why don't you go the extra step and let the DSP convert

the morse to ascii characters and stuff them on my screen?
Oh, wait...that would kinda defeat the point of code
testing, now wouldn't it. And it would also bring us to the
second point, the modulation itself:

> Simply turning a CW signal on and off 50 times a second
>will, depending on the rate of change of the carrier power,
>fill over 50 Hz of bandwidth at some power level. If you left

>At least that's my take on it, subject to correction.
>Bobby
>

Old time modems (I remember when they were about $500 each,
new) used to use FSK, and had four tones, two for send, two
for receive. The binary 1's and 0's were the high and low
frequencies of each pair. This worked great at 300 baud,
and was extended to 1200, and I believe 2400 is similar
(don't remember!). It was relatively simple to design, and
didn't require DSP, which was really rocket science at that
point. To hit 9600baud, they changed the plan. They
shifted the phase of a signal, rather than turning it on and
off, and they changed the amplitude.

Graphed, this phase amplitude modulation (PAM) looks like a
bunch of points on a crosshair, distance from center being
amplitude, and the phase change being in degrees around the
circle. In rough terms, the quality of the line determines
how many different points you can differentiate between, and
those points form a "constellation". I used to know how
many was which type of modem, but my memory has faded. The
graph represents one (1) cycle. Minor errors caused by
phase/amplitude shifts are corrected in software. To fit it
to the phone system, there is also adaptive echo canceling,
but that's another issue.

Point being, to my knowledge this is the most efficient way
they've found to squeeze info into the plain old telephone
system, and even if it isn't, it's far better than switching
on and off one frequency. With a phase change, you detect
multiple bits per carrier cycle. With on/off, you've got
multiple cycles per bit.

This brings us to the old myth that "for any given
bandwidth, you can only have half that many bits", based on
a misunderstanding of Nyquist sampling. The prediction was
that "Because telephone audio is only xK (I think about 4?),
you can't possibly have a modem faster than 2400 baud".

Well, clearly that's not the case. It was only the case with primitive modulation methods. And I sense the same type of argument being applied to cw/morse, at the modulating/encoding level.

So to flip it around again, look at morse code to be a primitive form of Huffman coding. And look at CW/morse modulation as a really, really inefficient form of pulse coded modulation. And to top it off, we're decoding it with a computer that although extremely powerful, has a lousy ability to time things - the one behind your eyes.

I keep flipping things because that's the way it seems to be with HF, compared to most other digital communications forms. Generally, the engineer has a given bandwidth, and wants to squeeze the most information possible into it. The potential for this in HF, and what I believe to be the neat thing they've done in the PSK mode, is to use modern technology to put a given amount of information into the smallest possible bandwidth. With a proper demodulator, this means that you reduce the noise. This means that you can go farther with less. Which is one of the points of HF ham radio. Or at least I thought it was.

We're really talking about 2 different things here. One is the bandwidth of CW/morse, the other is the effective bandwidth of CW/morse, as decoded by people. As a trivial example of the later, the difference between a dot and a dash in morse is a ratio of 3 to 1. Does anybody believe that a digital decoder would need a 300% difference to decode two tones? With a digital decoder, the difference becomes so small that the limiting factor is the carrier - and we're back to phase modulation!

So what we end up with is engineers spending time developing DSP filters to help people decode morse by hand. In the short term, that makes sense - the great majority of HF ham radios aren't hooked up for any digital modes, I don't believe. But for the long term, it makes no sense.

Along these lines, I remember being told that "the human eye is extremely sensitive to light - any man made device can only hope to approach it." For anyone that's played around with a Gen 3 nightscope, the statement is laughable.

I can't believe that anyone would hold the same argument with a "people" vs computer based encode/decode method for data exchange. When I wrote the "holding back better technology" statement it I just took it as a given. Like John Henry can't drive steel like a steam hammer. Maybe morse code needs a theme song...

Hey, another train analogy. I guess my old friend was a
good influence after all.

Bzzzzzzttt!!!! Wrong answer again. (God, I love
dealing with "knowledgable Extras" !!! :-)

Keying *IS* modulation ... it's 100% AM with something close
to a square wave pulse shape. It DOES create sidebands at the
frequency of the pulse rate and multiples thereof. The reason
that keying is "shaped" in rise/fall times is to "round off the edges"
of the keying square wave to cause the higher order sidebands
caused by the harmonics of the fundamental keying rate to fall
off more rapidly than they would if the keying waveform was a
pure square wave.

> HMMMmm - STILL no clear statement of CW bandwidth - so let's get
> MORE specific:
>
> A string of "dits" sent on 7 mhz at a code speed of 5 WPM - how much
> *actual* bandwidth? Sorry, no scientific calculator here, so spit it
> out in plain hz...

Carrier frequency is irrelevant to the bandwidth. That's only
dependent on the keying rate and the pulse shape of the
keying waveform.

The "standard" series for measuring "wpm" in Morse is the word
"PARIS" sent over an over with correct dit, dah, intraelement,
intracharacter, and intraword spacing. For that, at 5 wpm, with the
optimum rise/fall time of about 38 ms. for a K=5 fading circuit
the occupied bandwidth is about 20 Hz according to the nomograph

in the ARRL handbook.

However, a string of dits of the same dit length would have a wider
bandwidth because of the increased frequency of transitions.

Also, if you use the ARRL's "recommended" rise/fall time of 5 ms.
(which is supposedly the optimum for a non-fading circuit at 60 wpm),
you'll get a bandwidth much wider for the 5 wpm " PARIS" and wider
yet for your string of dits. (and I suspect you'll find that most
transceivers fall close to the ARRL 5 ms. recommendation)

For a fading circuit at 50 wpm, the optimum rise/fall time is about
3.5 ms., which results in a bandwidth of about 220 Hz, according
to the ARRL chart.

> And for the REST of the hair-splitters, the original premise of all
> this was the claim of "much more efficient modes of communication
> with LESS bandwidth than CW" - and I *STILL* haven't seen
> any that fit BOTH qualifications simultaneously! (or otherwise, for
> that matter...)

By comparison, PSK31 runs 50 wpm in ~30 Hz bandwidth. So,
PSK31 uses about 7.333 times less bandwidth than OOK Morse
for the same WPM rate of 50 wpm.

Additionally, it (PSK31) uses, of course PSK with uniform symbols,
which permits good timing recovery and something at least closely
approaching ideal matched filter demodulation, so it's capable of
better performance (at equal WPM rates and signal levels).

NOW do you recognize that you HAVE "seen one that fits BOTH
qualifications simultaneously" ???

By the way, it's possible to do even better than PSK31, both in terms
of bandwidth vs. wpm and in weak signal performance. PSK31 was
not designed to be "the best than can be done" ... it deliberately
gave up some performance because its designer wanted it to be
"more like RTTY" in terms of interactivity for live, real-time
keyboard
to keyboard chats. (This is NOT meant in ANY way to demean
PSK31 or its designer ... it's a VERY nice piece of work.)

> 2. I still hate FFT's.

Any time I can help someone remember (or learn for the
first time, as the case may be) something about the basic
principles of radio communications it pleases me.
```

However I'm curious ... why do you "hate FFT's" ???
They are really useful. The only reason I could imagine
hating them is if I had to do all the math manually. (I
normally one of several computer programs I have
depending on the situation.)

I hope some "rabid pro-FFTer" hasn't brainwashed you
into thinking that "You're not a REAL spectrum analyst unless
you do all the math by hand." :-)

(Gee, I just realized .... [tongue in cheek]
that sounds a lot like the pro-coder's bogus assertions that
"You're not a REAL ham unless you can copy Morse real
fast in your head.")

Very nice, Thanks. I did notice that you don't list the samplers.

I looked at the AES catalog, they list the samplers, plus something else that looks like an installation for them (?) I'm confused. The bird I just bought has a sampler, but it looks like any other slug except for the BNC output in the middle.

If you really want to work weak signal vhf and above cw is a
must. Aurora on 2 meters and up is almost impossible on ssb,
eme is out of the question (unless you can afford to put up
an array that covers an acre!). 5 wpm is easy, learn it and
have more fun with your tech priviliges (you aren't going to
make 1000 mile contacts on 2m on fm while 1000 mile+ on
ssb/cw is done every year).

Consider the symbol rate as the frequency
being sampled. If a symbol equals only 1 bit, you
can pump less bits per unit time through a given
bandwidth.

However, if symbols are "overloaded" to represent
more than one bit, you can pump more bits per unit
time through the same bandwidth ... PROVIDED that
the signal to noise ratio is good enough to support
detecting the overloaded symbols correctly. You
have to satisfy BOTH Mr. Nyquist and Mr. Shannon
at the same time or things turn to crap, guaranteed.

Hi all, and thanks for reading,

I am considering the purchase of a 3 band HT, to cover 2 meter and 70 cm
, thoses i am already familiar with and also 6 meter, but i dont know
anything about 6 meter, so any info would be appreciated,
basically i am looking for physical specs as well as usage, Ie, does it
propagate well, what are the limitations, what are the optimal earth
conditions, things like that...

Thank you, reply via e-mail please...

Marc, VE2HPS

>....[snip]....

I personally put such a relay (which I got from my local auto-supply house by asking for something like a "continuous-duty starter solonoid") in my pick-up truck (which just happened to be a Ford, but I would have used the same relay in ANY vehicle) in the way Ron described about two years ago, and it has worked well.

I was able to mount the second battery under the hood (had to relocate the windshield-washer-fluid container a little) and I just ran big (#12 or #10, don't remember) wire to the topper area.

While I was at it (and since I found a spare starter solonoid in my junque box!), I modified the starting wiring just enough so that a switch under the hood selects WHICH battery supplies the starting current. In fact, just yesterday I decided that the original vehicle battery is getting weak, so I'm currently starting the truck on the "radio" battery until I can have the other battery checked by someone with the proper equipment.

The switch also has a center-off position in which NO battery will supply starting current. If I've got to leave the truck in a place where it might be stolen, I start it (from either battery), throw the switch to the center-off position, drive to that location, stop the truck, and it now won't start at all (until the switch is changed). It should be needless to say, but I sorta hid the switch.

Finally, I added two lamps on the dash to indicate just which battery I'm starting from so I won't forget. And, since they, too, were in my junque box, both lamps are "push to test" so I can test the bulbs!

Finally finally, I also added a $10 DVM module to my dash; it can be switched to show the voltage of either battery.

Overkill, but it was fun.

It's interesting how defensive people are about the code/no code debate. I never mentioned the subject. Technical standards for various license classes have been lowered dramatically over the years also. How easy can it get when you only have to get 70 (or is it 75) percent right on a multiple guess test with only four choices on each question and the questions are published for anyone to study?

For whatever reason, when I became a ham, one amateur would not call another one a "moron" just for mispricing a piece of equipment. The more appropriate response (if any) would be to point out the situation in a considerate way. Come to think of it, the same thing would to apply to society in general not just (what used to be) the ham "fraternaty".

I cant believe so many people defend such rude behavior.

Bruce

>too. DO NOT GET THE VOICE MODULE! It's a waste of money (I know, I bought
>it

Which filters would you recommend to get? I am looking at the crystal
filters from
International Radio. They have three different filter bandwidths listed,
1.8Khz, 2.1KHz
and a 2.8Khz for SSB use and 250Hz, 400Hz and a 1000Hz for CW use . These
filters
are $150 each so I really do not want to "experiment" with trying each of
them out. I
am not into contesting so I doubt I will have problems with crowded band
conditions.
I would like to try to do some DX work and try to work some of the sats in
orbit.

Hmmmm....maybe we should split up the 2m band into tech and
general segments. (I have to be careful, somebody's likely
to think that's a good idea!)

This is the point - morse tests are just a barrier to entry.
It doesn't have anything to do with "protecting" the CW
bands from those that don't know how to use CW. Why isn't
there an SSB test? Or a packet operation test?

I have a friend, a great HF contester, that I'm certain
couldn't tell an N connector from an SMA connector. His use
of packet is solely to hear information on band openings - I
think he had friends set it up for him. Does this make him
less of a ham? I don't think so. Morse testing dates back
to a time when it was an important skill for the military,
and for public safety. It's time to say goodby to the
testing, not to the code.

Imagine, it could be a positive press release about ham
radio! Unless you're convinced that ham is gong to
eventually die - in which case I respectfully ask that you
stay out of political discussions, as anyone who's convinced
ham radio is going to fail is likely to assist in its
happening.

That's not more accurate, it's only misleading. Bandwidth
is a term used to describe the amount of radio spectrum used
in sending a signal.

Again, we're talking about the bandwidth of the transmission
mode, not the carrier. You had made the assumption that
they were synonymous, and are circling your argument to make
us believe that you had intended to just talk about the
carrier from the beginning. Now what would be the point of
that?

>
>How did we make the quantum leap from *5* to 50 wpm?
>
It's not such a leap. If you're testing at 20wpm, it goes
to reckon that the extra classes are sending code at 20.
Examples of 5 and 50 bracket 20 pretty well. And while 20Hz
isn't much bandwidth, 220Hz is - or about 100Hz at 20wpm -
is, at least with such a small amount of information flowing
over it.

Ok, lets look at digital. With 10 baud, 1 stop and 1 start
bit, we yield 8 bits/second. At a 2:1 compression ratio,
that yields 2 characters/second. That's 120 characters per
minute, or at 5 words and a space, 20 words per minute.
Cool.

PSK runs about 30 baud, at about 30 Hz bandwidth.
(http://bipt106.bi.ehu.es/psk31.html). By the above, that
means 60 wpm for 30Hz. Contrast this to 20wpm and about
100Hz (based on Gary's calculations above), and you've got a
10 to 1 improvement in efficiency, based on bandwidth.

I knew morse couldn't compete, but frankly I didn't suspect
it was quite that bad. PSK is promising, but it's also new,
and apparently designed with as much emphasis on low cost of
use as efficiency improvements. With better DSP, and more
efficient use of phase modulation (possibly combined with
amplitude), I'd expect it to become much better. But only
if there's interest!

With traditional PAM, I believe the amplitude points are
equalized at the start of transmissions, and set. With HF,
this wouldn't work well, but I'd be willing to bet that a
differential carrier amplitude modulation would work, and
could increase the rate/bandwidth ratio.

Why worry about efficiency? Because the greater the
rate/bandwidth ratio, or more accurately by reducing the
bandwidth for the required communications rate, you reduce
the noise, and thus improve the signal to noise ratio, and
this increases the potential distance of transmission at any
given power. It's the same reason that morse/CW is better
than SSB for low power.

And the initial argument was just that. That CW is getting
in the way of other, better, modes which would improve the
quality of ham radio, because of all the myth/nostalgia
associated with CW/morse!

>>

>
We have radios today that have enough DSP horsepower to do
PSK with a software upgrade. Yes, digital modes require
more work than plain morse, but I contend that in 1999 the
extra circuitry is trivial, and I think the potential for
improvement is large.

Which was my original point.

CW/morse certainly has its place, but it isn't the
efficiency leader any more. It's just another mode.

>they were synonymous,

How the Hell do YOU know what I "assumed"? Fact IS I have SEVERAL times indicated *I* was talking about the carrier INDEPENDENT of any accompanying sidebands, regardless of their origion!

and are circling your argument to make
>us believe that you had intended to just talk about the
>carrier from the beginning. Now what would be the point of
>that?

TELL ya what Sherlock - *I'll* avoid trying to read your mind if YOU will stop trying to read mine - you obviously have NO idea what MY thoughts and intentions were on the subject, OR possibly even HOW ths subthread started!

Here's a CLUE:

==========
KC2FCR <noone@nowhere.com> wrote

>
> I also feel that CW is holding back other modes that could
> be much more efficient, in terms of power and bandwidth,
> than CW.

KJ6Q replied:

OK - maybe I've been around too long, but I'll bite...

Please educate me on some of those modes "more efficient in terms of power and bandwidth than CW" (keep in mind that CW has *ZERO* bandwidth, for starters...)

For SOME unexplainable reason *I* can't think of any...
==========

NOW, whether YOU choose to accept it or NOT, the "CW" *I* was referring to was the CARRIER itself - since at this point, keying rates and

dubious spurious additions had not even ENTERED the picture, so could NOT be quantified!

TO continue, the additionl discussion concerning keying rates HAS been educational, since I had never really given it much thought (OR encountered it in that Extra Class exam...), as has been the additional info on the newer modes this discussion has provided.

The true PITY is that, in order to *receive* this info, it's been necessary to wade thru TOTALLY unnecessary abuse and slurs - which is one of my OTHER observations in what *I* consider the steady decline of quality in ham radio - the fact that we have replaced a former level of reasonable courtesy and the ability to communicate in a gentlemanly manner, with the current "in your face" abusive style that many of us "seasoned hams" find so distasteful and objectional... I would FAR rather be viewed as a mildly ignorant, but courteous, operator, than an abrasive smart-ass technical "expert". (will I now be greeted as a loser on BOTH counts?)

With THAT in mind, I will publicly apologize to any in this thread I may have unintentionally offended with MY well intended statements...

What will YOU do?

>
>You're yelling at the guy because it took him too long to
>point out that you were incorrect?

First, I'm not "yelling" at anyone, and if you followed ANY of the above, where am I incorrect? If anything we are merely guilty of talking about 2 different areas of the same subject...

>
>>
>>
>>>

>>> For a fading circuit at 50 wpm, the optimum rise/fall time is about
>>> 3.5 ms., which results in a bandwidth of about 220 Hz, according
>>> to the ARRL chart.
>>
>>How did we make the quantum leap from *5* to 50 wpm?
>>
>It's not such a leap. If you're testing at 20wpm,

WHO said ANYTHING about "testing", and what does THAT have to do here? Have you actually followed and understood this thread, and the specified parameters leading to the above? It most certainly was NOT about 20 wpm!

it goes
>to reckon that the extra classes are sending code at 20.
>Examples of 5 and 50 bracket 20 pretty well.

But THAT wasn't what was being discussed! Why not toss in 100 wpm - that will even BETTER suit your case...

And while 20Hz
>isn't much bandwidth, 220Hz is - or about 100Hz at 20wpm -
>is, at least with such a small amount of information flowing
>over it.

The "quantum leap" is related to the FACT that the outlined example *I* requested was about a 5 WPM series of dits, and some of YOU are attempting to insert higher keying rates in order to ALSO supply a higher bandwidth than MY example !(see how reading other peoples minds works?)

>
>Ok, lets look at digital.

WHY? what's THAT got to do with the example under discussion?

This HAS been informative - too bad it had to be accompanied by so much ego-driven posturing and juvenile abuse in the process... JUST the stuff I HATE to see so prominent on today's ham bands... BUT, keep it up, and you will eventually have those bands all to yourselves - I wonder who you will "communicate" with, and how truly enjoyable it will be for you...

I'm done - you fellows are free to continue...

> (A)mplitude (M)ODULATED carrier.
> I guess something that can't exisit would occupy zero bandwidth.

I can't help but wonder what's WITH you guys!

I had CLEARLY stated (in the part you so carfully trimmed!) that I
understood that a plain carrier wasn't actually part of an AM
transmission *until* it was modulated... Are you REALLY so insecure,
or in need of attention that you must grasp at straws in a childish
effort to somehow elevate yourselves at the expense of others - at
least in YOUR eyes?

YUP, this IS INDEED the "future" of amateur radio - ain't it GRAND...

Gary - KJ6Q

I had the same thought! Someone's post had a note at the
bottom pointing to www.nocode.org, which is an international
organization trying to get rid of the code test.

Possibly the best thing I've found in the whole
discussion...

Again, and for hopefully the final time, we're talking about
CW/morse. That's the thread, and your reply was to my post,
specifically about morse, not CW. This is the context.

You're right, you could have decided that everyone's use of
the term "CW" up to that point was incorrect, and decided to
start talking about carriers alone without letting the rest
of us know what you meant. I don't believe that's the case
though. I believe that you were thinking along the lines of

other hams that have been conditioned to believe that CW
(morse/CW) is the ultimate in efficiency, in terms of
bandwidth.

I believed at the time that the comment to my post was an
arrogant reply based on an incorrect belief. I still do. I
further believe that everyone that jumped down your throat
to prove you wrong thought the same thing. If I'm wrong,
I'm sorry, but that's how it seems to me.

I didn't remember that specifically keying CW to form
CW/morse increased the bandwidth, but intuitively realized
that 0 bandwidth is silly when talking about the mode that
was the whole basis for this thread.

You can pick any rate you want, the efficiency is the same.

>>
>>Ok, lets look at digital.
>
>WHY? what's THAT got to do with the example under discussion?

Morse is digital, for one. In order to compare the
efficiency you have to use the same units. Rather than just
spout the numbers, I explained them.

>
>This HAS been informative - too bad it had to be accompanied by so much

I agree that there has been too much of that. But the
flaming posts also have bits of information in them
sometimes stated as matters of fact, some of which deserve a
reply.

I think that the fuel for the fire has as much to do with an
emotional attachment to the issue, one way or the other,
than anything else.

>I'm done - you fellows are free to continue...
>
>Gary - KJ6Q

I think that sums it up too. I'm set unless there's
anything left to be said about efficiency of cw/morse.

Just random thoughts

4342. Re: No Code Is Citizen's Band

Newsgroup: rec.radio.amateur.equipment

MUCH more like it!

Please don't be so quick to assume the intent of others - while *I*
generally appreciate CW, I *don't* use it often, and certainly
understand the rationale of some who oppose it in FCC testing.

Like it or not, the "artificial barrier" created by required CW
testing DID somewhat seperate the wheat from the chaff in screening
newcomers into ham radio - tho' it may be hard to supply a concrete
argument as to whether those shut out would have been a liability or
asset to the hobby.

Like some other "oldtimers", when I was first exposed to ham radio and
its entry requirements, I easily recognized the personal benefits it
offered, and the CW and theory portions of the exam seemed a SMALL
price to pay for entrance - as were the later increments to Extra.
THUS, it IS somewhat grating to have seen the entry requirements
lowered thru the years, and STILL hear whining the the price is STILL
to high. I wouldn't BEGIN to claim great expertise in all aspects of
electronics, but believe me when I say I am as proud of the steps
taken, and the ultimate obtaining of MY Extra Class license as ANY
possessor of ANY class of electronics certificate, and I *do* get
ruffled when that license is utilized as a cheap shot tool to offend
or insult me... I'm sure you recognize the "condition".

Call it the generation gap I guess.

In any event, you have already seen my apology - and I certainly
welcome and accept yours - hopefully we BOTH learned something - I
know *I* did, and I thank you for what beneficial info I received!

With that radio, I suspect it won't work at all. It seems
to be very sensitive of voltage drops, and should be drawing
close to 5A at low power. There are a couple of threads in
this group about the problems with this radio, one of the
guys having trouble is a friend of mine. I don't know how
many/what percentage, but his "blinks out" on anything less
than a perfect 13+ volts, and resests all the memories and
settings to factory defaults, among other things. If you
can still get them, and you don't need CTCSS decode, I'd
seriously look at the 2500. It's a great radio. (The 2600
could be too, I don't know, but I haven't heard anything bad
about the 2500 at all.)

If you want, when his radio comes back from Yaesu, I can ask
him to put an ammeter on it at low power, but I think that's
going to be a couple of weeks. Let me know.

Specs on the 2500 are 12A at 50W, 5A at 5W, 13.8V +/- 10%.
With the 2500, if the voltage drops below that, the display
dims and the output becomes a little garbled (according to
reports). With the 2600, the radio just shuts down. I
don't think undervoltage will harm either radio, but they
both caution against overvoltage.

One thing you could try, to avoid buying another supply, is
to feed a small 12v gel cell from your supply, through a
small 12v lamp. The battery will supply the higher current
required for transmit, while the supply keeps the battery
charged the rest of the time. As long as the supply is
regulated (13.8v), it won't ever hurt the battery.

I use this system to run an icom scanner that likes to draw
about an amp more than my little 12v supply that runs some
of my other gear.

Best of luck!

Well, I gotta say that I've heard of people running some wierd
quadrant modulated stuff with DSP that have racked up many more
miles per watt than CW. Guys running moon bounce with less
than legal max power setting and WITHOUT big dishes. If that's
not more efficient than CW, maybe I'm missing something....

>"Blaming guns for Columbine is like blaming

>Why is 440Mhz power output less?
>
>73s,

Its the problems of gain vs freq in transistors. The black bricks used
in mobiles use transistors bonded onto a ceramic substrate to form a
small amp with the matching and bias all built in. The problem is that
the transistors used have less gain at UHF than VHF and so a lower
output. The manufacturers could put alternative bricks in but then costs
would increase.

There are also associated problems of heat generation etc in less
efficient amps.

>The antenna alone is worth the price...
>have you priced an external GPS antenna at all??

Yes, one could buy the thing, discard the GPS receiver, keep the antenna, and it would be a good deal - for someone who needs an antenna. No argument.

But I thought we were talking about whether this would make a good GPS receiver, not just an antenna! So: if you write your own software and can interpret the data coming from the GPS directly, $20 for a receiver and antenna is an extremely good value. If you can program a PIC to translate the data into NMEA, that adds maybe another $5 or $10 to the total cost - still a good value.

However, a Basic Stamp is quite an expensive little beast, and makes the whole project several times as expensive if you use one. That may no longer be a good value, compared to brand-new GPS receiver boards that output NMEA directly. That's all I was trying to point out.

I have a FT-50 (bought new) and FT-51 (used). Like you, I've never used most of the features of the FT-51 that the FT-50 lacks, except for experimenting with them.

Things I do like about the FT-51:

- ability to display both frequency and long alphanumeric name for a channel at the same time (The FT-50 can do freq or 4-char alpha but not at the same time)

- large backlit keypad

- easier to hold shape

Things I like better about the FT-50:

- water resistance

- better sounding speaker, more audio power available

- has a mode to display battery voltage continuously

- single bank of memories for scanning, rather than separate "left" and "right" banks. Yes, each "side" of the FT-51 can do both VHF and UHF, but with some limitations when using the "wrong" side for a particular frequency

- 800 MHz receive

In practice, I use the FT-50 more often.

>any receiver monitoring will know what to do to follow the call.

Call setup has to be done in the clear. But once the base and mobile have
established communications, they could switch to passing encrypted data,
using encryption that depends on some information stored in the phone
and the switch but never transmitted over the air. An eavesdropper wouldn't
be able to decode this data, at least not easily. Once the encrypted
channel is established, the base and mobile might agree to change
frequencies or PN sequences, making the original values negotiated during
call setup useless for further listening.

I'm not implying that anyone does it exactly this way, but it *is* possible
to provide pretty good security through encryption. Simply using digital
modulation provides no real security.

cuthlo-

I have the older model T8. It has a serious problem with the plastic clip
that holds the battery in place. I've had three break so far. It looks
like the T81 uses the same battery.

I've had it almost a year. Icom has promised a revised battery case
design, but months go by and it isn't here yet.

I have also had two transmitter failures, each requiring a trip to Icom
factory repair. It isn't clear what happened, but either something keyed
an external speaker/microphone, causing continuous transmission for
several minutes, or the radio keyed itself. After recharging the battery,
the bar on the display showed full output, but a wattmeter showed zero.
Even if there was something externally keying the radio, it shouldn't have
killed the transmitter!

>plug into the charger socket,

You should use their cigarette lighter adapter if you're plugging it into a running car, since the adapter has a noise filter. If you want to run from a 12 V power supply, or a 12 V battery, all you need is a cable with the right DC plug on the end of it - the radio itself will take up to 16 V in.

>my concern is doing this will constantly charge the nicads,now
>i was wondering the charger is 15v so has the radio been
>built to current limit at 15v the correct current for charging and
>when you apply 12v no or minimal current is seen by the nicad pack??

The radio's built-in charger is a 60 mA constant-current trickle charger. It will charge a NiCd pack continuously, even when the pack is already fully charged. You should get full charge current even with 12 V in and a 9.6 V battery - there's still enough "headroom" between those.

If you don't want the battery to be charged, you can operate the radio with no battery attached at all. Or you can install the alkaline battery pack, with or without batteries.

>to about 8.5 volts which will slow charge the nicad pack and also mean
>if you supply the radio 12 ish volts the nicad pack wont see enought
>voltage to charge but the radio will work ok

The radio contains a current regulator circuit that puts out about 60 mA.
So no matter what the input voltage, and no matter what the battery voltage,
the battery gets 60 mA of charge current - as long as the input voltage is
at least a few volts above battery voltage.

> Thanks.

It's not the rig.
As to "Powered and grounded very well", if it were, you probably wouldn't have alternator whine.

In my install (ford explorer) I run it from the cigarett lighter line. I actually removed the ashtray, and mounted the rig there. Totally quiet.

In theory, you want to run a line direct to the battery, and take a DC ground to the frame, where no other current is flowing.

If that's still giving you alternator noise, check your alternator. If you have one of the three diodes open, you may have abnormally high ripple at the battery.

Robert-

Transistor power amplifiers are less efficient at higher frequencies, and therefore put out less power.

No, it doesn't "get out" the same. It wouldn't work quite as well, if everything else were the same. Additional signal reduction occurs more at higher frequencies, and can be calculated by the factor of 20 times the logarithm of the ratio of frequencies, or 20 log (144/440) = -9.7 Decibels.

Another factor helps a little: an antenna at 440 MHz will usually have a little more gain compared to a same-sized 144 MHz antenna.

All in all, you probably won't notice much difference unless you are near the edge of a repeater's coverage area. As long as you are well within "line-of-sight" of a repeater, its signal will fully "quiet" the noise in your receiver, and both 144 and 440 MHz signals will sound as good.

Continuous carrier has a small but finite bandwidth, dependent on the rig itself, but it carries no information, other than that it is there.

Once you modulate the carrier in any manner, you make sidebands. Period. CW has sidebands, but they are very close to the carrier, and dependent on the keying rate, and the slope of the carrier from on to off.

4372. Lowe HF-225/E Repair Solution

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-23 00:00:00 UTC
From: wa4hhg@amsat.org
Message-ID: <37c5b239.23396585@news.erols.com>
Source record: 100461
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.scanner

I have an HF-225/EUROPA which failed due to a near lightning strike.
The symptom was no receive on frequencies under approximately 16 mhz.

A quick call to the "Lowe Workshop," a description of the problem and
they knew exactly what the failure was. The switching diodes in the
front end bandpass filters also steer the VCO tuning voltages. The
lightning stroke had caused the switching diodes D1 and D2 to short.

To replace the defective diodes, remove the top and bottom of the
receiver case being sure to unplug the speaker from the main chassis.
Next, remove the 1-1/2" X 2-1/2" steel shield located on top the
board, near the edge by unsoldering the 4 points. The diodes, their
coils and capacitors are all located in plain sight, under this shield
on the main board.

With a DVM set to diode function, test all the diodes under the shield
front to back. The proper cathode to anode voltage drop should be
about 0.730V. Note all of those which deviate grossly from this
specification for replacement.

Unsolder the defective diodes from the bottom and as the board is a
double side design with pate-throughs, make sure the solder has also
been removed from the top side of the board.

Replace the defective diodes with BA244, 1SS135 or like-spec, RF high
speed switching diodes. I chose the 1SS135 diodes which are available
from Kenwood Parts @ $1.95 ea, (800) 421-5080. Thanks to Universal
Shortwave (800) 431-3939 and Lowe Electronics, LTD (UK) 011 441 629
580-800 for their help and saving me time and an expensive trip to
Derbyshire for repair of my HF-225/EUROPA which has been in daily use
for 4 years.

Jerry,
I own the ATAS-100 and it's base kit (ATBK-100). As far as I know, it only works with the FT-747 and the FT-100. However, just to let you know, it's a FANTASTIC antenna for mobile and base operations.

Lee,
Just about everywhere has this rig for the same price. You might want to check Texas Towers (http://www.texastowers.com) or AES (http://www.aesham.com) or Juns electronics (My personal favorite) (http://www.juns.com). As to the filters, GET THEN ALL! The SSB filters really help, and if you're into CW at all (even listening), get that filter too. DO NOT GET THE VOICE MODULE! It's a waste of money (I know, I bought it). Overall, this is one really FANTASTIC rig. You might also want to look into the ATAS antenna. It makes mobile operations a snap.

Wooka,
Some hate it (they usually love ICOM), and others love it. I've had mine
for about a year, and outside of loosing the antenna tuner (Yaesu fixed that
and upgraded the rig at the same time for free), the rig has worked without
a problem. I'd recommend it to anyone.

Hi All,

I just acquired a Kenwood R-600, and I hope to use it in my automobile. I do not have the Kenwood DC plug; how do I connect 13.8 volts DC to the radio? I'm sure the information is in the manual, and, you guessed it, I don't have one of those, either.

Thanks for any help offered.

73,

Tony N8SNC

To achieve a slower agc in SSB mode that is the same as in the AM
mode, parallel a 4.7 uf elect. cap across
"C 230" on the main board. This is found under the DSP plug in board. Be
careful unplugging and plugging the DSP board and also it is tight work!
I used a small Tant and was able to attach it right to the existing
surface mount cap. (22 uf)
Good luck!

Sounds like a stupid remark that lowering the standards has
brought problems to ham radio. About as dumb as thinking
anyone rolls over in there grave. You must watch to many
horror movies. Anyway just check the FCC busted list most
all are general and up, many are advanced and extras, you
know the "good old boys". Not many nocoder's on 40 and 75
meters, maybe you better stop listening to the VHF/UHF
nocoders and go listen to the crud on 40 and 75. I will say
with the latest rounds of FCC actions the general and up
crowd have cleaned it up and are watching their operating
procedures much better. 73, Bill

I bought one of the 2m versions of this radio (DJ-S11T) 8 days ago as a reward for my son who was trying out for his Technician license. He didn't
make it, so I've been carrying it around.

First the summary:

Low power, but good battery life.
Convienient antenna, but non-replaceable.
Easy to use, confusing to program.
Small in size, but small speaker.
Great price; odd squelch.

Now the details:

Its a good value for the money.

It only transmits at 340mw, but that seems to be good enough to hit all the
local repeaters from anywhere in town.

The small size is fantastic. It is very convenient to carry and inconspicuous.

I'm using NiCad batteries and charging it from the top. I can monitor the
local repeaters all day (>16hrs) without running out of power.

It has a built-in telescopic antenna that looks too short to do as well as
it does. Collapsed, it pivots down along the side of the unit. It looks
like it is rivetted, non-replaceable, and probably vulnerable. Fortunately,
it operates amazingly well with the antenna collapsed and protected.

The instructions are cryptic. Programming is confusing. But day to day operation is very easy.

Audio is OK as long as you don't turn the volume up beyond halfway. Then
the small speaker starts to distort. Can't hear it well while wearing it on
your belt.

THERE IS NO SQUELCH ADJUSTMENT. Probably the most serious defficiency. I
find that the built-in squelch seems very intelligent about turning on for
weak signals but not for sporadic noise. Great around noisy equipment like
a computer lab. However, sometimes, it misses the first letter or two of
an initial callsign.

If and when my son does get his license, I may have to buy one of my own
(or something equivalent).

4401. FT-51R users: past or present

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-23 00:00:00 UTC
From: David Snyder Hale <david@isi9.mtwilson.edu>
Message-ID: <7pqkbagpi1@agate-ether.berkeley.edu>
Source record: 100490

I'm interested in hearing comments from Yaesu FT-51R users, either past or present, about what you think of the radio, particularly past users.

I have (had) one... it was stolen. I really liked it (especially now that it's gone), but now as I sit down and think about replacement, I'm trying to decide if I should get the same thing. What gives me any pause is the fact that I never used most of the snazzy bells and whistles. (Like paging, for instance.) Some features I never used but might kind of like to still have "just in case" (like cross band repeat).

I have to say though, that I did think the audio was really very nice, and I liked being able to name memories (like AO27 UP, AO27 DN, etc.) But I found the battery charging stands to be lacking, and a real pain.

Anyway, I wondered if there were others who moved on to other radios and what they thought of the FT51 and other radios.

Best,

Bob
ebay rules require you to sell if buyer meets your reserve.
worst that can happen is ebay would kick you off.
likely result is buyer would give negative feedback.

I buy ham equipment from ebay and am not as yet licensed.

I don't use it illegally and I think it is unreasonable to assume
that your equipment will be used illegally.

As I said, I think we are all set. You could have saved a
post.

It was a messy discussion, but I think it's been educational
- at least to me anyway.

Just random thoughts

Ahhh, this is an open ended statement to which any of us could apply almost any meaning. To what standards do you refer?
Code? Conduct? Technical? Ethical? Public Service? Contesting? DX-ing? Homebrewing? Possible new regulations? There are a lot of areas to which you may be referring and lots that I have missed.

We've had the obnoxious radicals on the low bands for years. Long before the incentive licensing came out. The debate about code Vs no code and speed was going on long before I was a ham (It wasn't required in other countries...Treaty only required the ability to recognize it on low bands)

The Extra Class has always been more of a prestige thing, than anything else. It certainly offers little in the way of extra privileges.

So...Over the years I've seen little change in operating practices. Just the names, faces, and modes of operation.

I saw little change operating quality when the Tech and Tech plus came in

So... I'm not sure just where you were headed with the original statement which sounds pretty much like a bit of trolling.

4410. Re: First 2 Meter Set and FAQ

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-23 00:00:00 UTC
From: Harry SM0VPO <harryvpo@hotmail.com>
Message-ID: <37C0F69C.A6DD802C@hotmail.com>
Source record: 100499

I personally would be inclined to go cheap in the beginning, something that can be used to "get started" such as an old S/H hand-held or an even older xtal-rig such as the 2200GX (Kenwood/Trio) which you should be able to pick up for a song. I would guess at $50 - $70 or so. You cold even try getting hold of a transverter for your HF rig, if you have one. You can sometimes be lucky with these. Make your first antenna by just stripping 18" of co-ax back to form a 1/2-wave.

If, after listening to the activity on VHF, you STILL want to continue then you will have a box that you can use whilst you save up for something more reasonable. Buy new (not S/H) if you are really serious. A decent Yagi and TV rotator will complete it. The old 2200 can then be used as a local "box-monitor". Chances are that when you hear what is happening on the 144MHz band you will switch off in disgust and go HF. I did!

SM0VPO
PS - Do you have "squeekies" in the USA?

Does it REALLY increase the value of a ham-rig if you sell it "complete with original packing material..."? If so, then why do you never see adverts such as "FS: Original packing material for ..."?

Yes, Try "Hamcom". It is available free and can be downloaded from loads of sites. I only have an old version. You do need to build an interface, but this is a simple 741 Op-Amp chip, full details contained in the program help menu. Just couple the PC speaker to the MIC socket for TX.

Also does RTTY as well.

Harry

hi all
i have a yaesu 50r that i want to run of 12v!
my question is this, the manual states use there 12 adapter and
plug into the charger socket,
my concern is doing this will constantly charge the nicads,now
i was wondering the charger is 15v so has the radio been
built to current limit at 15v the correct current for charging and
when you apply 12v no or minimal current is seen by the nicad pack??
any help would be appreciated

This almost certainly could be made to work. However, doesn't a Basic
Stamp cost many times as much as the GPS receiver in question? That
makes the whole project somewhat less interesting.

If you're willing to program in assembler, you should be able to do
the job with a PIC or similar microcontroller much more cheaply.

Hi there. I'm an electronic musician seriously searching for the
following old electronic musical instruments from 1960-1990,
any condition, broken OK:

Synthesizers
Keyboards
Drum Machines
Sound Modules
Effects Processors (tape echos, filters, flangers, phasers, etc)
Analog Sequencers
Analog Modular or Patchable Synths

Roland TB-303 Computer-Controlled Bassline
Roland MC-202 Microcomposer
Roland TR-909 Rhythm Composer
Roland TR-808 Rhythm Composer

Moog, ARP, Korg, Roland, EML, EMS, Buchla, Serge, Yamaha, Aries,
SMS, PPG, Electrocomp, ATA, Casio CZ/VZ, Simmons, Electroharmonix,
Steiner-Parker, Polyfusion, Emu, Wavemakers, Synton, anything similar!

In general, I'm looking for old stuff with knobs, sliders or especially
built in patchbays. The older or more unsual, the better!

For a better idea of what I'm into, please see:
http://members.aol.com/rolandman1/index2.html

If youve got anything or know someone who might, please email me
privately at rolandman1@aol.com and be sure to include price and
condition. Thanks in advance and apologies if this message bothers
anyone.

amaha TG77 Tone Generator
Casio VZ-10m Professional Digital Synthesizer
Roland System-700
Roland System-100m
Buchla Electric Music Box
Buchla Music Easle
Steiner-Parker Modular
Steiner Synthacon
ARP Sequencer
Tonus ARP model 2600 Synthesizer

4421. FT-847 Best Price and what filters to use?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-23 00:00:00 UTC
From: Lee Scott <DownWithJunkMail@Spam.Net>
Message-ID: <7prg73$98u@nnrp2.farm.idt.net>
Source record: 100510

I'm looking at getting a FT-847 and would like to know who has
the best price for the North American version. I know there is a
coupon for $200 good until 8/99.

I also understand that the SSB performance is greatly improved
using the optional crystal SSB filters from Inrad. I hear the Collins
filters are not as good. The question is which bandwidth crystal
filter, on RX, should be used with this radio and is there any
reason to use one of these expensive filters for TX?

Here we go again... It seems to me that the new hams, coming in through the no-code door, are doing the exact same things as the hams who came through the novice door, like me. I am not a no-coder, but if no-code had been around when I came it, I would have rather done it that way. I don't believe in code as a "requirement" and I see it as a big hurdle for those who want to upgrade. However, what few bad hams we have in the no-code class are no different the the scum that hangs out on some of the low bands. I think a lot of the "old-timers" feel that they had to learn that stupid code, and they had to work so darn hard, they're jealous of the ones who don't. They want everyone to suffer as they did. I don't agree.

Sure, some elmers may be rolling in their graves, the others are cheering to see their hobby come alive again, and to grow. The standards weren't lowered, they were altered. The basic standards are still the same.

the adapter you are asking about will only charge it if the battery is low I believe. I have the ft51-r and it is the same way. I have to connect the cigarette lighter adapter to that charging connection and it will charge the batery if it is low but other wise it won't hurt it. And as far as your voltage question I don't understand but if you mean that the adapter says it runs off 15 volts, they all say around 12 to 15 volts so I wouldn't worry. It will work fine. I hope this helps you. 73

My household also has an FT2500 (my son's radio). It is a truly great rig, and while my 2600 was being repaired I thought I may have made a mistake not getting another 2500. They are about $40.00 less and work well. They have less goodies than the 2600 though. I hope that the problems are all sorted out with the 2600. Good luck with your decision.
sjcmba@banet.net wrote:

My 2 month old FT-2600 is at Yaesu for repairs. The hot mic problem, but
also more serious issues concerning lock-ups during scanning and "reboots"
during transmitting which reset all of my programming. I have a FT-2500 on
loan and think it is a much more solid radio.
Scott C.

I do find this discouraging. Seems every one I've talked to has had nothing but problems out of this radio. I like the fact it has lots of memory channels and the ctcss decode/encode

HI

Thanks for reply,what i meant by 15 volts was that the nicad charger
supplies a stated 15 volts to charge the 6v pack which for a 14 hr
charge is a very high voltage,so i assumed that the radio steps it down
to about 8.5 volts which will slow charge the nicad pack and also mean
if you supply the radio 12 ish volts the nicad pack wont see enought
voltage to charge but the radio will work ok, BUT I WANTED TO CONFIRM
THIS before leaving the radio connected to a 12volt supply with alot
of Amps Available to fry the battery and radio, but from what you have
said feeding it 12 volts does seem to be ok
thanks again

4433. How much power is needed for Moblie rig in shack?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-23 00:00:00 UTC
From: wardseward@yahoo.com
Message-ID: <7prupj$b1h$1@nnrp1.deja.com>
Source record: 100522

I'm looking at getting a moblie rig (FT-2600M if anyone cares) to use in my shack and am wondering if a power supply i already own will work. It is a 12V/4amp. I know the specs on most moblie 2m rigs say 13.8V/10amps, but want if you run less than that? Will i just get less output or will it damage the rig?

>Why is 440Mhz power output less?

I can't say for sure but I suspect it has to do with the fact that these
radios use the same output PA at 440MHz as at 144MHz.
From what I have seen of power transistor spec's, the gain drops
off as the frequency increases. That would suggest that the power
output, for the same input drive level to the PA, would drop.

4437. ### VISAR PROGRAMMING QUESTIONS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-23 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19990823123332.00374.00005507@ng-cg1.aol.com>
Source record: 100526

I just got a new Motorola Visar radio, version 4.5 (or maybe it's 4.6...) I have two other Visars, both version 2.5 I believe, and both are programmed fine and working. However when I program the new visar to scan, it doesn't work.

When I hit the top side button (Which is programmed to "Scan On/Off / Scan Prog") it gives me the little icon on the screen acting like it's scanning, but it doesn't unmute the speaker to ANY audio. Now, if I hit the second side button (which is programmed to "Monitor/Scan Prog. Status") it will temporarily unmute the audio for about 3 seconds and I can hear activity on that channel, but then it goes back off.

I can hear all of the channels fine when not in scan mode, but as soon as I put it into scanning mode, it shuts off the receiving audio and won't open to any channels.

Now, I programmed this radio with the exact same settings as the other Visars, and they are all working fine... This one is new out of the box so I'm pretty sure it's working as well. I'm wondering if this one is just more selective about the programming options or something since it's a different radio software version.

Has anyone had this problem before, and can you tell me where the setting in the programming software would be so I can correct it?

I appreciate any responses and thank you for reading this. Please email PDFDISP@aol.com with any info. Thanks!

Yes an alternator filter from Radio Shack. Be sure to get one big enough to handle the transmit current. I have used them for years and they have always taken out the alternator whine.

\/\/ard.

I think the most current is used when your are in dead key and tuning your antenna.. Or when sending CW.. I don't know about damaging the rig or the power supply but, I DO know that'll you blow a lot of fuses.. I've had some problems tuning my antennas and when you're tuning wrong, the amperage goes up.. I blow fuses and I have a 20 amp power supply.. No damage to the supply or radio yet though, not saying that it might not happen either though..

I'd recommend getting a bigger power supply and until then, using a car battery for your power supply.. Just put a trickle charger on it every now and then...

I have a new Kenwood 570 with mike, CW filter, heavy duty power supply and speaker. It has never been on the air. I paid $1925 for all of this a couple months ago. I can't use any of this because I had to move into an apartment. Of course I'd like to get as much as I can for it since it is brand new never been used, but I am a very reasonable person.

I also bought a Drake TR-270 2/440 base for $550 at the same time. I have to sell that also.

Any reasonable offers are welcome. Email me here and we can connect further.

Maybe just low transmit output but with that wide a discrepancy more than likely no transmit. Just get an appropriate power supply .

I have 4 Heliax jumper cables.

2 are about 4 feet long and 2 about 8 feet long.
They 1/2 inch 50 ohm cable. Each has a 90 degree type "N"
connector
installed on the end with heat shrink . The other end has a
straight
type "N" connector with heat shrink.

Andrews is written on the heat shrink.

$20 each plus the shipping.
